EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

DEC REMARKS:

Ricco McKenna reports that Rothchilds is going to be performing a SSI outside the building in the next two weeks. He states that because of surrounding groundwater and head pressure that they cannot perform the boring investigation at this time as the basement would quicky fill with water.

Ricco reports that a phase 1 was done last year and will send the findings of this report. 11/14/13 ~ctr~

Finding of report requested numerous times. THe lates being 5/19/15

Report received. Area which what originally requested by DEC to be sampled was ignored. And RP claiming affted by off site contamination requiring restitution.

New boring finally installed 10-15-15. Contamination under floor reported and appears to be delineated and localized? Fina report pending.

NYSDEC SPILL REPORT FORM

DEC REGION: 7 **SPILL NUMBER:** 1214113

SPILL NAME: ROTHCHILD COMPANIES @ 805 E GENESE **DEC LEAD:** CXROSSI

Report received 01/26/16. DEC concurs with recommendations, except that there is no proof that there is an off site migration of contaminates. No off site investigation performed.

"6.0 RECOMMENDATIONS
It is AECC's opinion that (no) further investigation or remediation is warranted, and the NYSDEC should issue a "No Further Action" to Rothschild Genesee Properties, LLC for the following reasons:
• The contamination likely originates from an off-site source
• The concrete slab prevents contact with the contamination
• There are no indoor air quality issues in the basement
It is understood that if mitigation measures for the basement stormwater infiltration issues include removal / discharge of sub-slab water, the NYSDEC will be contacted and an appropriate treatment plan will be developed. Since the sub-slab contamination appears to be related to gasoline, the plan will include testing for (and possible treatment of) tetraethyl lead, since this compound was not analyzed during this investigation.

DEC REMARKS:

Tractor trailer jackknifed and hit guardrail, spitting saddle tanks. The Fire Department reported 175 gal loss.. Fifty gallons were removed from the saddle tank and 125 was released to roadway and drained via catch basin drain/8 " piping from the roadway bridge to concrete sidewalk area below.
Because of this accident RT 81 SB, both West St to 690 and 690 West to 81 was shut down and a quick response was required. Therefore DEC hired Op Tech who responded in 25 minutes and removal was complete on bridge in 50 min work. Op Tech then went below the bridge to concrete area on East Water St to clean up diesel which flowed from bridge. Contacted Dan at T&D Transport and notified company of responsibility for clean up, who was to call back to discuss payment by of T & D further. USDOT 244254 . No further conversations were made.

Because of accident RT 81 SB was shut down and both West St to 690 and 690 West to 81 was shut down and quick response was required so DEC hired Op Tech who responded in 25 minutes and removal was complete on bridge in 50 min work. Op Tech then went below the bridge to concrete area on East Water St to clean up diesel which flowed from bridge.

Contacted Dan at T&D Transport who was to call back to discuss responsibilty of T & D further. USDOT 244254

DEC REMARKS:

4/7/2016 - GZA installing borings in floor of interior of building when bored into unknown UST with unidentified petroleum product in it. Per GZA, geoprobe did not advance through bottom of tank so no release to environment. Advised GZA to remove product / water form UST, obtain City Fire Marshal permits for tank closure, expose top of tank sufficient for cleaning activities, clean tank, fill in place, and advance borings on either side of tank to tank base, analyze for 8260, 8270, and report results to DEC. UST is most likely a federally regulated UST which will have to be registered then closed. 1953 Sanborn Map consulted shows structure was formerly a parking garage, and second similar tank in structure and directed GZA to secure an EDR report to evaluate need to search for and close second tank. Also noted multiple gas tanks at NE corner of property along shoulder of South Crouse Ave. KCKemp

Date Spill Closed: 12/24/2014

"Date Spill Closed" means the date the spill case was closed by the case manager in the Department of Environmental Conservation (the Department). The spill case was closed because either; a) the records and data submitted indicate that the necessary cleanup and removal actions have been completed and no further remedial activities are necessary, or b) the case was closed for administrative reasons (e.g., multiple reports of a single spill consolidated into a single spill number). The Department however reserves the right to require additional remedial work in relation to the spill, if in the future it determines that further action is necessary.

If you have questions about this reported incident, please contact the Regional Office where the incident occurred.

Site Description

Location: The Oil City/Carousel Center – Site 8 is located in an urban area of Onondaga County at 300 Bear Street West. The site occupies an area of approximately 6.5 acres in the southeast portion of the lands generally referred to as Oil City, south of Hiawatha Boulevard. Site 8 is located between the NYS Barge Canal and Solar St. and is bounded to the southeast by Bear Street and to the northeast by BCP Site 6 (C734134). Site 8 is located within the overall boundaries of the Destiny Project Area which and is generally bounded by: Interstate 81 to the north and northeast; Hiawatha

Street to the north and northwest; and the NYS Barge Canal to the west and southwest, and Bear Street to the south and southeast. The Destiny Project Area consists of eight additional contiguous BCP sites. Site Features: The site originally consisted of a large vegetated, contaminated soil stockpile and associated stormwater protection structures (swales and detention basins). Approximately 88,000 cubic yards of contaminated soil excavated from the Destiny USA mall expansion (NYSDEC BCP Site No. C734104) were stockpiled on Site 8. In April 2014, Destiny agreed not to pursue BCP tax credit for removal of this soil from the site. Portions of the NYS Barge Canal Lands and Solar Street (0.9 acres total) are also included in this site. Current Zoning/Use: The site is currently inactive and is zoned for industrial use. Land uses surrounding the site generally consist of business districts and mixed residential property located approximately 1/2 mile to the northeast. Historical Uses: The majority of the property was used as an oil storage tank farm for Mobil Oil. Prior uses that appear to have led to site contamination include; oil storage in above ground storage tanks and below ground pipelines. On July 18, 2011, the Department signed the Brownfield Cleanup Agreement for the site, the effective date of which is June 28, 2005. The Applicant has submitted a Remedial Investigation Work Plan. This document is available for public review in the document repository for this Site. These documents relate to the activities described above. Site Geology: Surface deposits at Site 8 consist of imported fill materials composed of silt, sand, and clay, intermixed with foundry slag. Underlying the fill are the truly "native" soil or unconsolidated deposits that were present at and beneath the ground surface prior to development of the area. These included salt marsh deposits, including marl, shells, and peat (often referred to in boring logs as "organic"); Deltaic sand and gravel; Lacustrine (Lake) silt and clay deposits that can vary from approximately 40 to almost 200 feet in thickness; glacial outwash deposits that vary from less than 20 feet to more than 130 feet; and a relatively thin (< 30 feet) glacial till deposit consisting of a heterogeneous mixture of silt, sand, gravel, and cobbles. Bedrock, consisting of weathered shale, is found at depths greater than 100 feet. Groundwater beneath the sites flows in a southwesterly direction towards the NYS Barge Canal. The Barge Canal flows into Onondaga Lake approximately 900 feet downgradient. Depth to groundwater across the site is fairly shallow, ranging in depth from approximately 0.5 to 8 feet below ground surface.

Site Environmental Assessment

Analytical results from the Remedial Investigation are currently under review. Results will be made available once the Remedial Investigation report is submitted and approved.

Site Health Assessment

The NYSDOH will evaluate the potential for impacts to public health from exposure to site-related contaminants once sufficient information from the investigation of the site becomes available for review.

Technical Memorandum

To: Parsons Corporation
301 Plainfield Road Suite 350
Syracuse, NY 13212

From: Lisa Connors, Environmental Scientist
Watts Architecture & Engineering

Date: May 17, 2021

Subject: NYSDOT I-81 Viaduct Project
City of Syracuse, Onondaga County
Watts Job #13092
Phase I Environmental Site Assessment for Proposed Noise Walls 16 A/B

Civil Engineering
Transportation Engineering
Structural Engineering
Environmental Engineering

HVAC Engineering
Plumbing and Fire Protection Engineering
Electrical Engineering
Architecture

This memorandum reports the results of a Phase I Environmental Site Assessment (ESA) screening assessment of the area proposed for the construction of noise walls 16A/B being evaluated as part of the NYSDOT I-81 Viaduct project. The proposed noise walls are located within the Town of Salina, Onondaga County, New York. The project location map can be found in Attachment A at the end of this memorandum.

I. Purpose & Scope

The purpose of this Phase I ESA is to identify sites of potential environmental concern where hazardous waste or contaminated materials may be excavated during construction or found within the existing and/or proposed right-of-way (ROW) and to recommend additional investigations or construction advisories, if needed.

For this assessment, Watts Architecture & Engineering (Watts) reviewed the physical setting, area land uses and history, and government record databases regarding the release or storage of hazardous, toxic, or petroleum-based substances. Aerial photographs and Sanborn maps were reviewed for historic land use information.

II. Site Location

The proposed noise wall location is proposed along I-81 from just south of the I-90 interchange to Exit 26 (Mattydale Route 11) in the Town of Salina, Onondaga County, New York.

III. Government Records Search

Radius Search

A government records search was ordered from Environmental Data Resources, Inc. (EDR), an independent record search firm, using ASTM-specified databases and seach radii. Federal databases that were reviewed included: United States Environmental Protection Agency (USEPA); National Priority List (NPL); Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS); Resource Conservation and Recovery Information System (RCRIS); and Emergency Response Notification System (ERNS). The search also covered New York State Department of Environmental Conservation (NYSDEC) inactive hazardous waste sites, NYSDEC Solid Waste Landfills (SWL), Petroleum Bulk Storage database (PBS), Chemical Bulk Storage database (CBS), Major Oil Storage Facility database (MOSF), and New York Spills information (Spills These databases are geocoded and identify known or suspected inactive and other hazardous waste sites; registered petroleum and chemical bulk storage tank sites; reported spills, including leaking underground storage tanks; hazardous waste generators; and treatment, storage, and disposal facilities within a specified search distances of the project site.

The findings of the database searches are presented below and the EDR Report can be found in Attachment B.

National Priority List (NPL)

One (1) NPL site was identified within 1.0 mile of the project site:

- Onondaga Lake

Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS)

Two (2) CERCLIS sites were identified within 1.0 mile of the project site:

- Onondaga Lake
- Old Salina Landfill Route 11 and Wolf St

CORRACTS

Three (3) CORRACTS sites were identified within 1.0 mile of the project site:

- Cooper Crouse-Hinds – 1201 Wolf St
- Solvents & Petroleum – 1405 Brewerton Rd
- Safety-Kleen Corp – Factory Rd & Mitchell

Brownfields

One (1) Brownfield site wase identified within 0.5 mile of the project site:

- Syracuse Label Co Inc. – 110 Luther Ave

RCRA Generator (RCRA GEN)
Three (3) RCRA GEN sites were identified within approximately 0.25 mile of the project site. This database identified sites that generate, transport, treat, store, or disposes of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA).

- Kmart Corporation #4 – 2803 Brewerton Rd
- Parsons Commercial – 301 Plainfield Rd
- Aspen Dental – 124 Northern Lights

RCRA Non-Generator (NON GEN)

Five (5) RCRA NON GEN sites was identified within approximately 0.25 mile of the project site. This database identified sites that no longer generate, transport, treat, store, or disposes of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA).

- Penske Auto Center – 2803 Brewerton Rd
- Hancock Sub – E M Olly Rd
- Sand Rd Substation – Sand Rd
- Mobil Oil Corp Ss #8 – 2801 Brewerton Rd (2 records)
- Convenient Family Health Care – 2804 Brewerton Rd

Institutional and Engineering Controls (IC/EC)
Two (2) IC/EC sites were identified within 0.5 mile of the project site:

- Onondaga Lake
- Syracuse Label Co Inc. – 110 Luther Ave

Delisted SHWS
One (1) DEL SHWS site was identified within 1.0 mile of the project site:

- Solvents and Petroleum Service Inc – 1405 Brewerton Rd

Solid Waste Facilities/Landfill Sites (SWF)
One (1) SWF site was identified within 0.5 mile of the project site:

- Ocrra Ley Creek Transfer Station – 5158 Ley Creek Dr

NYSDEC Bulk Storage Database (UST/AST)
Nine (9) UST/AST sites were identified within 0.25 mile of the project site. This database identifies sites that have or had chemical, petroleum or major oil storage (aboveground or underground) registered tanks.

Historic Auto Database

Two (2) Historic Auto sites were identified within 0125 mile of the project site:

- Gauvin Wallace – 2807 Brewerton Rd
- Northern Lights Mobil – 2723 Brewerton Rd

Historic Drycleaner Database

One (1) Historic Drycleaner site was identified within 0125 mile of the project site:

- K-Mart Laundry & Dry – 2803 Brewerton Rd

In-House Environmental Database Searches

Watts performed an in-house environmental database search, which consisted of reviewing the NYSDEC Division of Environmental Remediation Databases on the NYSDEC website. Information is stored in the following three databases on the website:

- Spill Incidents – This database contains records of both chemical and petroleum spill incidents.
- Environmental Site Remediation – This database contains records of sites that have been addressed under the State Superfund, Brownfield Cleanup, Environmental Restoration, or Voluntary Cleanup. It also includes the Registry of Inactive Hazardous Waste Disposal Sites and information on Institutional and Engineering Controls in New York State.
- Bulk Storage – This database contains records of facilities that are or have been regulated under Petroleum Bulk Storage, Chemical Bulk Storage or Major Oil Storage Facility programs.

No additional sites were found within approximately 0.25 mile of the project site.

NYSDEC Environmental Facilities Navigator

Watts reviewed the NYSDEC Environmental Facilities Navigator Map via the NYSDECwebsite. The mapped databases include Water Discharge Sites, Toxic Release Inventory (TRI) Sites, Superfund Sites, Active Solid Waste Facilities, Article X Sites, Air Emissions Sources, DEC Regional Offices, Airports, Civic Sites, and Hospitals. No additional sites were found within approximately

0.25 mile of the project site.

USEPA EnviroMapper

Watts reviewed the USEPA EnviroMapper Map via the USEPA website. The mapped databases include Water Discharge Sites, Toxic Release Sites, Superfund Sites, Hazardous Waste Sites (RCRA), and Air Emissions Sources. No additional sites were found within approximately 0.25 mile of the project site.

IV. Review of Historical Data

Aerial Photographs

Review of the aerial photographs indicates that the land around the project site has been developed for residential purposes to the east and used primarily as agricultural land to the west since at least the late 1930s. I-81 is depicted on the 1959 aerial photo constructed in what had previously been agricultural land. Beginning in 1959, the amount of agricultural land decreases and is replaced by residential and commercial developments. A large school is depicted east of the site on the 1959 photo. No environmental concerns were identified in the aerial photos.

Historic Sanborn Maps

Review of the historic Sanborn maps conducted using online resources indicates that the land around the project area has been developed for residential purposes since at least 1910. The 1950 and 1953 Sanborn Maps depict an auto repair shop at the rear of a residential property located at 434 Garden City Drive. No additional environmental concerns were identified in the Sanborn Maps.

USGS Topographic Maps

Watts reviewed the Syracuse, NY USGS 15-minute (dated 1895 and 1898) and the Syracuse West, NY USGS 7.5-minute (dated 1939, 1947, 1958, 1973, 1978 and 2013) historic topographic maps to identify features of importance, prominent landforms, and to look for long-term development changes in the project area.

The project area is located at approximately 405 feet above sea level (ASL). Topography is relatively flat and slopes gently toward the east, towards Beartrap Creek which is located immediately east of I-81. Development patterns appear consistent with those indicated in review of the aerial photos and Sanborn maps.

The maps show open land west of the project site up until I-81 was constructed in the 1950s. Commerical developments are depicted at the northern end of the project area starting on the 1958 map. This development density increases over time.

Historic City Directories

Watts reviewed historic city directories for properties along Brewerton Road in Syracuse, New York. The city directories review included searching the directories for businesses with a potential for environmental concern for the project area.

Properties along Brewerton Road have historically been used for commerical and residential purposes. Commercial usage of nearby properties increased over time. Several commercial properties that may be an environmental concern were identified near the project area including the following:

- 2723 Brewerton Road – Northern Lights Auto: Years 2000 - 2017
- 2801 Brewerton Road – Goodyear Auto Service Center: 1992-2017
- 2803 Brewerton Road – K-Mart: 1995-2017

V. Field Inspection Findings

An on-site field inspection was not performed for this review. A virtual field inspection was conducted by Watts on May 11, 2021 using Google Street View and Microsoft Bing Streetside photographs. The Google and Microsoft photographs allowed for visual assessment of the frontage of the properties at the time that the photographs were taken (generally 2013-2019). The inspection was performed to identify the presence of industrial/commercial businesses; chemical/petroleum/bulk storage; and signs of stained soil, distressed vegetation, or other visual indications of recognized environmental conditions.

The project area is located in a suburban neighborhood with residential properties beyond the Bear Trap Creek Bikeway, which runs along the east side of Interstate 81 from 7th St North to the Mattydale Shopping center. The northern end of the project area contains numerous commercial properties along Brewerton Road. The commercial busineses include numerous auto related companies including Dunn Tire, Goodyear Auto Servce, and Speedway Gas Station.

VI. Recommendations

There are two (2) sites identified in this Phase I Environmental Site Assessment that may pose an environmental concern for the Noise Walls 16 A/B Project.

Site A - Residential Property - 434 Garden Center Drive: Historical research has shown that this site contained an auto repair shop in the garage at the rear of the property in the 1950s. No tank records or spills are associated with this site. The site is located approximately 120 feet southeast of the proposed Noise Wall along the I-90 exit cloverleaf.

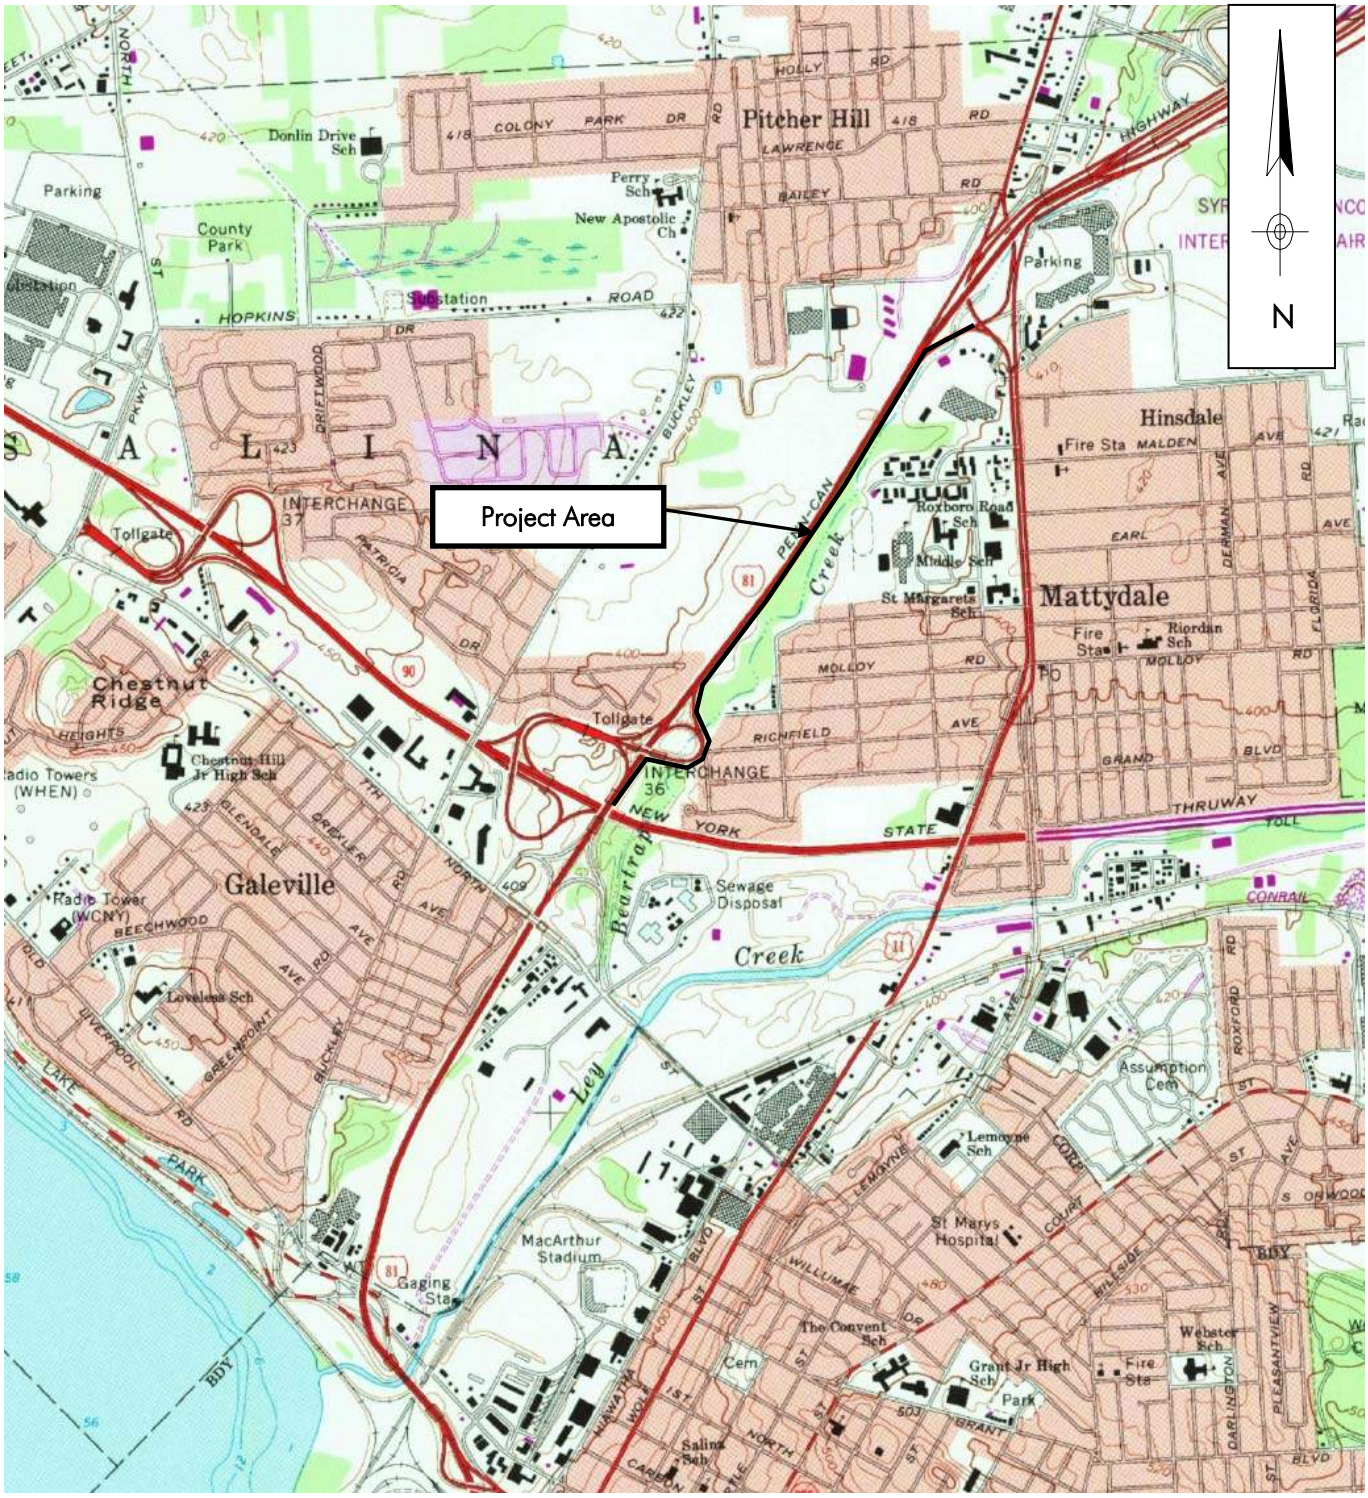

Site B - Mattydale Shopping Plaza - 2803 Brewerton Rd: This site is a shopping plaza that has a history of automotive related businsesses including Penske Auto Center (in K-Mart) and Dunn Tire. However, these sites are not located directely adjacent to the project area. As a result of their distance from the proposed work it is unlikely that they would have any direct impact to the project, however, they are identified in the event that changes to the noise wall alignment are considered.

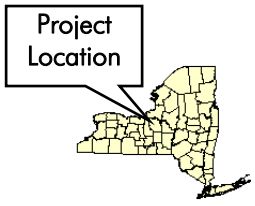

Automotive related businesses often exhibit contamination as result of the release of fuels, oils, solvent cleaning solutions and other chemicals. These materials may be released from ASTs, USTs, cleaning stations, hydraulic lifts, floor drains, oil/water separators and as a result of intentional dumping. The presence of contamination is more common with older business operated prior to the onset of environmental regulations requiring tank registration and testing and proper waste disposal. Newer businesses established after approximately 1980 are less likely to have handled materials in a manner that would have contributed to contamination of the environment. These sites pre-date 1980.

Site A is located directly adjacent to the propose Noise Wall location. If construction and property acquisition is anticipated near this site, we recommend that a HW/CM Detailed Site Investigation (DSI) be considered at this site. If a DSI is performed, it should be preceded by preparation of a Field Sampling Plan (FSP) to document the intent and parameters of the DSI. Such an investigation should include the areas near the site of potential environmental concern that would be affected by construction for the proposed project. If the results of the DSI indicate that large areas of contamination would be encountered, a Soil Management Plan may be necessary. No actions are recommended for the properties associated with site B at this time.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 12/30/2020 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

Federal CERCLIS list

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 12/30/2020 has revealed that there are 2

SEMS sites within approximately 0.5 miles of the target property.

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 12/14/2020 has revealed that there are 3 CORRACTS sites within approximately 1 mile of the target property.

Federal RCRA generators list

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/14/2020 has revealed that there is 1 RCRA-SQG site within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 12/14/2020 has revealed that there are 2 RCRA-VSQG sites within approximately 0.25 miles of the target property.

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/14/2020 has revealed that there are 6 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 2 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there is 1 EDR Hist Cleaner site within approximately 0.125 miles of the target property.

Summary Details:

Conditions at Proposal May 10, 1993): The Onondaga Lake site is located in the City of Syracuse and in the Towns of Salina, Geddes, and Camillus, Onondaga County, New York. Onondaga Lake is approximately 4.5 miles long and averages 1 mile in width. Seven major tributaries flow into the lake; water exits the lake via a barge canal at its northwest end and flows into the Seneca River. The land immediately adjacent to the lake consists primarily of industrial properties and county parks.The site is composed of the lake itself, its tributaries and the upland ha ardous waste sites which have contributed or are contributing contamination to the lake sub-sites). A ban was placed on public fishing from the lake in 1970 due to high concentrations of mercury in several species of fish. The lake was re-opened to fishing in 1986 on a catch and release basis only. Population and industrial growth in the areas surrounding Onondaga Lake has resulted in extensive biological, chemical, and physical degradation of its waters. In addition to mercury contamination in the lake, analyses of sediment samples detected barium, cadmium, chromium, cobalt, lead, ben ene, chloroben ene, total xylenes, various polycyclic aromatic hydrocarbons, pesticides, and PCBs. Historical information indicates that the lake received surface water discharges from various industrial processes and municipal waste water treatment plants. Initially, the Environmental Protection Agency EPA)has evaluated only operations of Allied Signal, Inc. AS) and/or its predecessors, and Linden Chemicals and Plastics, Inc. LCP), now owned by the Hanlin Group. EPA is attempting to identify additional potentially responsible parties. The ASfacilities manufactured numerous organic and inorganic chemicals. AS s Willis Avenue plant and LCP s Bridge Street plant located west of the Main Plant complex), used a mercury cell process to produce chlorine, sodium hydroxide, and potassium hydroxide. Each plant discharged aqueous waste streams containing mercury as part of normal operations. Other waste sources include AS s Solvay Waste Beds containing by-products generated from soda ash production and Semet Residue Ponds containing wastes generated from acid washing of light oil. Several consent orders have been signed in recent years between AS and the New York State Department of Environmental Conservation NYSDEC) related to the Solvay Waste Beds, the Semet Residue Pondsand ground-water contamination at the location of the Willis Avenue Plant. In early 1992, AS and the NYSDEC signed a consent decree to perform a Remedial Investigation/Feasibility Study RI/FS) to determine the type and extent of contamination at Onondaga Lake and to identify alternatives for remedial action. NYSDEC has also filed an action against the Hanlin Group under Subtitle C of the Resource Conservation and Recovery Act RCRA). The Hanlin Group commenced bankruptcy proceedings onJuly 10, 1991. Status December 1994): Presently, AS is performing the Onondaga Lake RI/FS and RI/FSs for the Solvay Waste Beds, Semet Residue Ponds, and Willis Avenue Plant. EPA has entered into a cooperative agreement with NYSDEC to provide funds so that NYSDEC can coordinate, manage, and oversee the ongoing work at the subsites and prepare a comprehensive RI/FS for the Onondaga Lake NPL site. NYSDEC, together with EPA, has started mailing information request letters to companies located in the Onondaga Lake watershed in an attempt to identify other potentially responsible parties. The description of the site release) is based on information available at the time the site was scored. The description may change as additional information is gathered on the sources and extent of contamination. See 56 FR 5600, February 11, 1991, or subsequent FR notices.)

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:	"Arrived onsite at 1400 hours. Doug Swiech and Eric Barker with Swiech Electric were onsite working on the dispenser. The area around the dispenser had already been cleaned up. There were two small piles of gasoline-impacted snow stationed on the pad. It did not appear as if gasoline had gone beyond the dispenser pad. GES arrived onsite shortly after I did. While onsite, I contacted station owner, Terry Young, regarding incident. He indicated that his plowing subcontractor hit the pump around 4:30 hours. The attendant on duty at the time called Terry and indicated that no gas was leaking. Terry indicated to me that the pumps were not shut down at that time. His daughter, Kim Foster, runs the station with Terry. She received a call from the attendant around 6:30 hours indicating that gas was leaking from the damaged dispenser. She instructed the attendent to turn off the main power to all the pumps. Kim contacted Swiech Electric around 6:50 hours. Kim arrived onsite around 7:00 hours. She

EXXONMOBIL (Continued) **S107488836**

turned pumps back on and gas sprayed from the bottom of the affected dispenser. She indicated that the gas was leaking from the special line. She immediately turned the pumps off again and called 911. Fire Department responded. No call was placed to DEC hotline by any party at this time. Sweich Electric arrived onsite around 8:45 hours. Sweich indicted to me that all three lines were sheared due to the impact, that the shut-off valve on the super line was partially open when they arrived, but the shutoff valve on the special and regular lines appeared to be properly closed. I contacted Terry and asked him if he could provide us with the inventories for the three tanks, and he indicated that he could have them for me on Monday morning. GES checked two monitoring wells immediately downgradient of dispenser and there was no product in them. 12-5-05 I arrived onsite at 8:30 hours. Terry and Kim were there. The inventory showed a 400 gallon loss from the special tank. I contacted Veeder-Root and spoke to Corey McMillan, 336-315-2837. He indicated that they received a call from IPT (Mobile's dispatching company)at 7:30 hours. According to Veeder-Root's records, a Low Level Product alarm came in at 6:24 hours followed by a Sudden Loss alarm at 6:26 hours. Both alarms were on the special tank. Corey indicated that the only way the submersible pump in the tank can remain on for an extended period of time is if the lever below the nozzle on the dispenser is in the up position (triggers a magnetic switch which sends an electrical signal to the pump). We surmised that the impact may have caused the switch to activate so it is possible that the pump may have been on during the two hour period from the time of the impact to the time the pumps were shut off. "

Remarks: "Car struck gasoline dispenser, causing over 2 gallons of gas to spill. Not cleaned up as of yet. Groundwater Environmental will be en route to investigate."

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Site Description:	"Location: The site is located at 110 Luther Avenue in Liverpool, Onondaga County. The Site is located in a commercial/industrial area just east of Interstate 81 and is bordered by Albion Avenue to the west, Knapp Avenue to the north, Luther Avenue to the east and an open lot and maintenance garage to the south. Site Features: This site is approximately 1.4 acres in size. The majority of the Site consists of a one story building that contains offices, light manufacturing and warehouse operations. The remainder of the Site consists of paved areas. Current Zoning/Uses: The current owner/operator, Syracuse Label Co., Inc. has manufactured labels and related products at 110 Luther Ave. for approximately 35 years. The Site itself is zoned industrial/commercial as well as the neighboring properties. Historical Uses: The site has a history of industrial/commercial use dating back at least to the 1920s. Since that time a number of industrial/commercial facilities have operated at the site including All-State Stamping Corp., Tuff Cote, Syracuse Bumper Plating, Inc., Raynor Overhead Door and Prince Tool and Die. A

SYRACUSE LABEL CO INC (Continued) **1000145076**

December 2007 Phase II investigation identified elevated levels of PCE and its degradation products (TCE, DCE and vinyl chloride) in several groundwater monitoring wells. Previous actions at the site include removal of discrete sources of contamination including underground storage tanks and grossly impacted soils from several locations around the Site which were overseen by NYSDEC Spills Management Program during the mid 1990's. Geology/Hydro-Geology The natural soil in the area of the Site consist of low permeability silt and clay overlying a layer of very low permeability glaciolacustrine clay, overlying this natural soil is fill placed during construction of the Site buildings and parking lot. Groundwater elevation is observed approximately 2-3 feet below grade surface dependent upon seasonal fluctuations. Groundwater flow direction is generally from north-west to the south-east. 12/22/11-The Department signed the Certificate of Completion for this site. "

Env Problem: " Post Remediation: Remediation at the Site is complete. Prior to remediation the primary contaminants of concern were VOC s including acetones, toluene, xylene (total), methylene chloride, PCE, TCE, and DCE and vinyl chloride in the groundwater and soil vapor. Remedial Actions at the Site consisted of: application of in-site chemical reduction (ISCR), by injecting a carbon and zero valent iron slurry into subsurface soils through a series of direct push soil borings in which these injections destroy groundwater contaminants. Although soil vapor concentrations of these compounds in the soil vapor were relatively low, a subsurface depressurization system (SSDS) has been installed to address and minimize potential indoor air contamination of VOCs compounds associated with the site Execution and recording of an Environmental Easement to restrict land use and prevent future exposure to any contamination remaining at the site. Groundwater uses restrictions at the site, unless it is treated prior to use and written consent is granted by the Department and NYS Department of Health. Development and implementation of a Site Management Plan (SMP) for long term management of remaining contamination as required by the Environmental Easement, which includes Institutional and Engineering Controls, monitoring , operational and maintenance, and reporting Periodic certification of institutional and engineering controls listed above. "

Health Problem: "People are not drinking contaminated groundwater because the area is served by a public water supply that is not affected by site-related contamination. Potential contact with any residual contaminants in the soil or groundwater is unlikely because the majority of the site is covered with buildings and pavement. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for people to inhale site-related contaminants due to soil vapor intrusion in the on-site building and an off-site building located immediately adjacent (southwest) to the site. The Site is located in a commercial/industrial area just east of Interstate 81 and is bordered by Albion Avenue to the west, Knapp Avenue to the north, Luther Avenue to the east and an open lot and maintenance garage to the south. Site Features: This site is approximately 1.4 acres in size. The majority of the Site consists of a one story building that contains offices, light manufacturing and warehouse operations. The remainder of the Site consists of paved areas. Current Zoning/Uses: The current owner/operator, Syracuse Label Co., Inc. has manufactured labels and related products at 110 Luther Ave. for approximately 35 years. The Site itself is zoned industrial/commercial as well as the neighboring properties. Historical Uses: The site has a history of industrial/commercial use dating back at least to the 1920s. Since that time a number of industrial/commercial facilities have operated at the site including All-State Stamping Corp., Tuff Cote, Syracuse Bumper Plating, Inc., Raynor Overhead Door and Prince Tool and Die. A December 2007 Phase II investigation identified elevated levels of PCE and its degradation products (TCE, DCE and vinyl chloride) in several groundwater monitoring wells. Previous actions at the site include removal of discrete sources of contamination including underground storage tanks and grossly impacted soils from several locations around the Site which were overseen by NYSDEC Spills Management Program during the mid 1990's. Geology/Hydro-Geology The natural soil in the area of the Site consist of low permeability silt and clay overlying a layer of very low permeability glaciolacustrine clay, overlying this natural soil is fill placed during construction of the Site buildings and parking lot. Groundwater elevation is observed approximately 2-3 feet below grade surface dependent upon seasonal fluctuations. Groundwater flow direction is generally from north-west to the south-east. 12/22/11-The Department signed the Certificate of Completion for this site. "
Env Problem: " Post Remediation: Remediation at the Site is complete. Prior to remediation the primary contaminants of concern were VOC s including acetones, toluene, xylene (total), methylene chloride, PCE, TCE, and DCE and vinyl chloride in the groundwater and soil vapor. Remedial

SYRACUSE LABEL CO INC (Continued) **1000145076**

Actions at the Site consisted of: application of in-site chemical reduction (ISCR), by injecting a carbon and zero valent iron slurry into subsurface soils through a series of direct push soil borings in which these injections destroy groundwater contaminants. Although soil vapor concentrations of these compounds in the soil vapor were relatively low, a subsurface depressurization system (SSDS) has been installed to address and minimize potential indoor air contamination of VOCs compounds associated with the site Execution and recording of an Environmental Easement to restrict land use and prevent future exposure to any contamination remaining at the site. Groundwater uses restrictions at the site, unless it is treated prior to use and written consent is granted by the Department and NYS Department of Health. Development and implementation of a Site Management Plan (SMP) for long term management of remaining contamination as required by the Environmental Easement, which includes Institutional and Engineering Controls, monitoring , operational and maintenance, and reporting Periodic certification of institutional and engineering controls listed above. "

Health Problem: "People are not drinking contaminated groundwater because the area is served by a public water supply that is not affected by site-related contamination. Potential contact with any residual contaminants in the soil or groundwater is unlikely because the majority of the site is covered with buildings and pavement. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for people to inhale site-related contaminants due to soil vapor intrusion in the on-site building and an off-site building located immediately adjacent (southwest) to the site. Site Features: This site is approximately 1.4 acres in size. The majority of the Site consists of a one story building that contains offices, light manufacturing and warehouse operations. The remainder of the Site consists of paved areas. Current Zoning/Uses: The current owner/operator, Syracuse Label Co., Inc. has manufactured labels and related products at 110 Luther Ave. for approximately 35 years. The Site itself is zoned industrial/commercial as well as the neighboring properties. Historical Uses: The site has a history of industrial/commercial use dating back at least to the 1920s. Since that time a number of industrial/commercial facilities have operated

at the site including All-State Stamping Corp., Tuff Cote, Syracuse Bumper Plating, Inc., Raynor Overhead Door and Prince Tool and Die. A December 2007 Phase II investigation identified elevated levels of PCE and its degradation products (TCE, DCE and vinyl chloride) in several groundwater monitoring wells. Previous actions at the site include removal of discrete sources of contamination including underground storage tanks and grossly impacted soils from several locations around the Site which were overseen by NYSDEC Spills Management Program during the mid 1990's. Geology/Hydro-Geology The natural soil in the area of the Site consist of low permeability silt and clay overlying a layer of very low permeability glaciolacustrine clay, overlying this natural soil is fill placed during construction of the Site buildings and parking lot. Groundwater elevation is observed approximately 2-3 feet below grade surface dependent upon seasonal fluctuations. Groundwater flow direction is generally from north-west to the south-east. 12/22/11-The Department signed the Certificate of Completion for this site. "

Env Problem: " Post Remediation: Remediation at the Site is complete. Prior to remediation the primary contaminants of concern were VOC s including acetones, toluene, xylene (total), methylene chloride, PCE, TCE, and DCE and vinyl chloride in the groundwater and soil vapor. Remedial Actions at the Site consisted of: application of in-site chemical reduction (ISCR), by injecting a carbon and zero valent iron slurry into subsurface soils through a series of direct push soil borings in which these injections destroy groundwater contaminants. Although soil vapor concentrations of these compounds in the soil vapor were relatively low, a subsurface depressurization system (SSDS) has been installed to address and minimize potential indoor air contamination of VOCs compounds associated with the site Execution and recording of an Environmental Easement to restrict land use and prevent future exposure to any contamination remaining at the site. Groundwater uses restrictions at the site, unless it is treated prior to use and written consent is granted by the Department and NYS Department of Health. Development and implementation of a Site Management Plan (SMP) for long term management of remaining contamination as required by the Environmental Easement, which includes Institutional and Engineering Controls, monitoring , operational and maintenance, and reporting Periodic certification of institutional and engineering controls listed above. "

Health Problem: "People are not drinking contaminated groundwater because the area is served by a public water supply that is not affected by site-related contamination. Potential contact with any residual contaminants in the soil or groundwater is unlikely because the majority of the site is covered with buildings and pavement. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for people to inhale site-related contaminants due to soil vapor intrusion in the on-site building and an off-site building located immediately adjacent (southwest) to the site. Environmental Interest/Information System:

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that

SYRACUSE LABEL CO INC (Continued) **1000145076**

discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
OSHA ESTABLISHMENT
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System:
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants.

COOPER CROUSE-HINDS LLC (Continued) **1000427847**

AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.
AIR SYNTHETIC MINOR
AIR EMISSIONS CLASSIFICATION UNKNOWN
COMPLIANCE AND EMISSIONS REPORTING
US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
OSHA ESTABLISHMENT
FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

E DESIGNATION: E DESIGNATION SITE LISTING
The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

HSWDS: Hazardous Substance Waste Disposal Site Inventory
The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

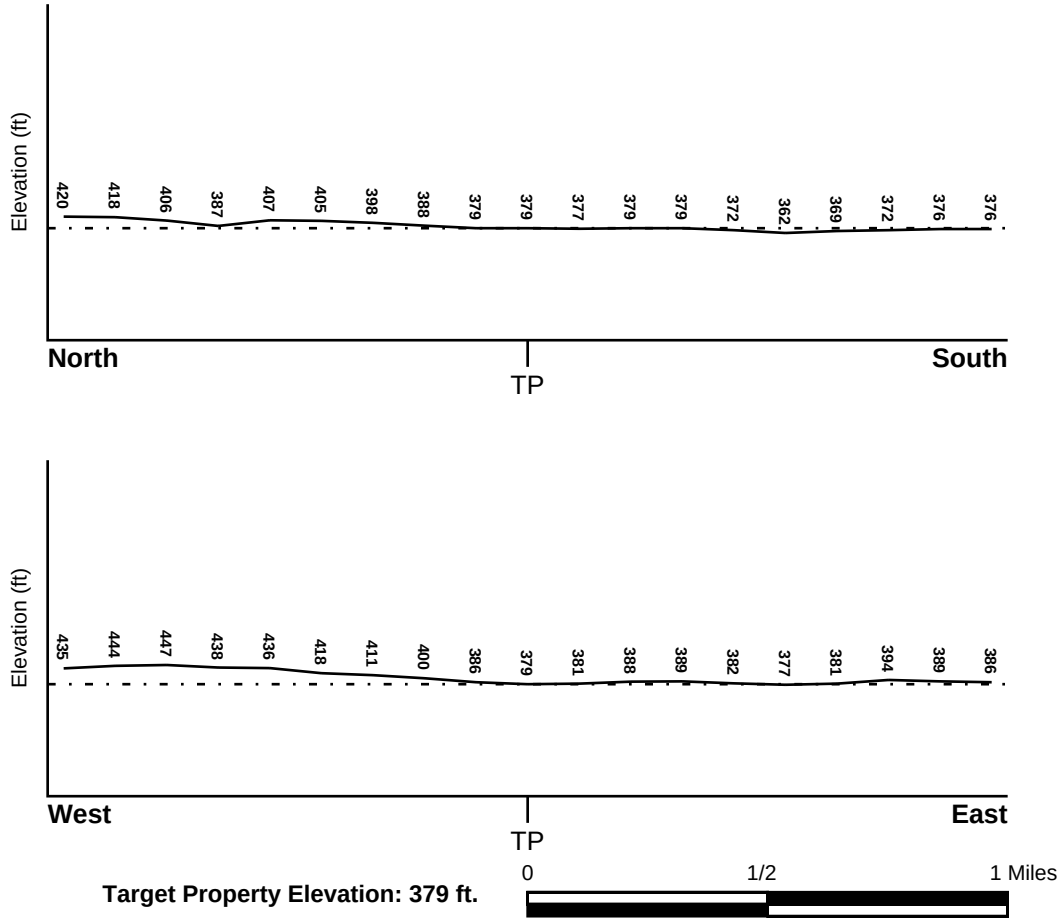

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Target Property Elevation: 379 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Niagara

Soil Surface Texture: silt loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Somewhat poorly drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 31 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	11 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 4 Min: 1.4	Max: 8.4 Min: 6.6
2	11 inches	38 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 4 Min: 1.4	Max: 8.4 Min: 6.6
3	38 inches	59 inches	stratified silt loam to loamy very fine sand	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 4 Min: 1.4	Max: 8.4 Min: 6.6

Soil Map ID: 2

Soil Component Name: Udorthents

Soil Surface Texture: channery loam

Hydrologic Group: Class A/D - Drained/undrained hydrology class of soils that can be drained and are classified.

Soil Drainage Class: Somewhat excessively drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 137 inches

Soil Map ID: 3

Soil Component Name: Fluvaquents

Soil Surface Texture: mucky silt loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Somewhat poorly drained

Hydric Status: All hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Map ID: 4

Soil Component Name: Dunkirk

Soil Surface Texture: silt loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EXECUTIVE SUMMARY

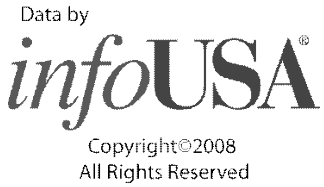

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.
