The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.

● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal "SEP 14" local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Bartholomew Horn

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

Hello,
I'm contacting you as a supporter of the community grid. I think it is the best option for our community.
I am a business owner in Syracuse and member of Center State CEO, recently I received a letter from the Save 81 Members. This group had obtained a list of the Center State CEO membership and sent a letter in support of their sky bridge option. There was no return address or any person to contact from their group other than to say send your comments to the I81 opportunities email. Which I think is cowardly.
Their Skyway bridge plan is all flash and not realistic. As a lifelong resident of Syracuse it looks to me like another scheme by Destiny Mall to get their way in the guise of acting for the community. They pretty much act for themselves. Please do not take their ideas seriously.

If the roundabout needs to stay at the present location how about building a new school for the Dr King kids be part of the funding.

We have been talking about this for years. We do not need any more extensions.
Let's build the grid!!!

Terry Horst, President RLA

Comments, for whatever option is chosen:

-The solution must be transformative in scale. Do not build a solution that does not improve aesthetics, economy, or environmental quality.

- The solution must include significant tree planting and gateway plantings.

- Regions who pay attention to plantings and excellent landscape design profit from them.

- Our region is known to be severely lacking in landscape design and aesthetics. It must be improved.

- Do not denigrate the urban design character of the places that will be modified.

- Do not make suburban spaces un-crossable.

- Do not diminish the economic value of the Downtown/University core. Please enhance your economic analysis with more detail.

- I support the relocation of the ramp system from Court St to Bear Street, but take extreme care to preserve the planned walkability and dense, urban scale desired for the lakefront area.

- Consider buildout of the lakefront area local road network as mitigation for the I81 impacts.

- Incorporate a detailed maintenance schedule and funding mechanism for the entire right-of-way that includes those elements outside of the asphalt surface.

● Conduct a community health needs assessment.

● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal "SEP 14" local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Jared Howe

Subject: Tear Down the Structural Racism of I-81

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

ATTENTION: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

Please consider the needs and concerns of ALL the citizens of the region. It seems to me that the motivation of some is so that Syracuse “looks progressive” without regard for the actual effects of the GRID on the population.

I have heard comments of people who state that the GRID plan will reduce the noise, emissions and traffic going through Syracuse. This is ridiculous. The emissions and noise that were elevated away from the population will now all be right down where people live. Pedestrians trying to cross streets will be a nightmare. The traffic will make it difficult for people driving to work, for the busses transporting people to work and for emergency vehicles to get to the sites of accidents and the injured.

The current GRID plan does not address the concerns of businesses that will be negatively effected by the plan nor the through traffic of trucks.

Please consider an alternative plan, perhaps the bridge option, so that the needs and concerns of ALL the region’s citizens are met.

Mark Frechette, P.E.
Project Director
New York State Department of Transportation, Region 3
333 East Washington Street
Syracuse, NY 13202

Rick Marquis
Division Administrator
Federal Highway Administration
Leo W. O'Brien Federal Building
11A Clinton Avenue, Suite 719
Albany, NY 12207

Dear Mark and Rick:

I am writing to express my concerns with the announcement of the Community Grid as the Department of Transportations preferred option. I am currently employed at the Homewood Suites by Hilton Syracuse-Liverpool, which is located directly off I-81 at exit 25.

I am worried that re-routing I-81 to the current 481 will cause my employer to lose business or close. My schedule and hours are always made based on hotel needs and availability. If the hotel isn't busy enough I could lose hours, ultimately affecting my income.

Everyday our hotel sells anywhere from 5-30 or more additional rooms on the day of arrival. This means guests who did not have a reservation for a particular date, make their reservation on the day they plan to arrive. Some people walk-in to the hotel without a reservation and book a room to stay. Please do not assume that "today's travelers" have planned ahead and know where and when they are staying because of the advancements we've seen in technology. Yes, technology has helped people have unlimited booking options; however, plans change and some people travel alone and cannot safety utilize the technology to make room reservations for themselves while driving. The assumption being made that same day reservations and walk-ins no longer happen in this industry is not based on fact and can have a detrimental effect on my job and income. It is clear and obvious that whomever believes this assumption did not consult with anyone in the hotel industry, especially the hotels located off I-81 in the Town of Salina. Walk-in hotel business and same day reservations (typically made based on location alone) are certainly not a thing of the past and continue to happen daily at hotels all across America. If my hotel were to lose these 5-30 reservations per day because we are no longer located of I-81 it could cost me my job or the jobs of my co-workers. Additionally, it is important to note a large majority of our reservations – in advance or same day of arrival bookings – are made based on our easily accessible location. Most hotels are built next to freeways and Interstate highways for a reason... people want easy access to their travel routes regardless of traveling for business, leisure, passerby, etc.

I implore you conduct more fact based research on how much revenue would be lost from the travel based industry businesses located off I-81, including hotels, gas stations, restaurants and fast food establishments. The Draft Environmental Impact Statement suggests it would only be 1% decline in business. As a person dealing directly with the guests who choose to stay at our hotel because we're right off I-81, I can assure you it's not merely 1%!

Thank you in advance for your consideration.

Sincerely,

Melissa Hughes

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.

● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal "SEP 14" local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Jayne Humbert

Subject: The Future of I-81

CAUTION: This email originated from outside of the Department of Transportation (DOT). Do not click on links or open attachments unless you recognize the sender and know the content is safe.

Thank you Mr. Buttigieg for coming to Syracuse and having a look for yourself. It was sad to see folks standing around holding up signs such as "81 is public health crisis."

The fact is all of our local Hospitals were built around the quick access to ambulate patients in need from all the surrounding suburbs. Removing the highway and opting for the community grid is only going to ensure folks won't be getting the emergency care they need on a timely basis.

The hospitals have grown to what they are now because of our I-81 highway.

Right now most of the folks that oppose the highway are within a very short drive on surface streets to get to those hospitals, so they will never know the pain of being in crisis when the distant hospital is the only thing that can save them. Folks outside the city will likely lose their battle due to delays in getting care. All because downtown residents want to blame their hardships on something in the public's eye.

How are we to be shuttled to all the hospitals right next to I-81 when seconds count, if the highway no longer exists?

Nobody thus far has wanted to address this problem. I sincerely hope you will bring it up on a public basis so many others like me can jump onboard.

The attached photo will show you those Two emergency rooms and their close proximity to our lifeline - Interstate 81. There is yet a third emergency room just out of view on the northside of Syracuse at St. Joseph's Hospital(once again, close to the lifeline Interstate 81)

Thank you for all you do. Best wishes moving forward Mr. Secretary.

Concerned Suburb Resident,

Craig Humes

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

I am in favor of the community grid, especially for social long overdue justice. But I am concerned as a resident of Dewitt about I481. It must keep and advance the pedestrian & cycling progress where 481 crosses rte5 & 92. We need traffic lights, noise mitigation, more lanes on 481. Thank you. Linda Imboden, MD

Subject: Tear Down the Structural Racism of I-81

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Sophia Infranco

Subject: Tear Down the Structural Racism of I-81

Dear

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Emily Iqbal

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.

● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal "SEP 14" local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Megan Jacobs

Hannah Brazil

Hi,

As a resident of Dewittshire, I ask that you please upgrade / rebuild rt 481 / 81 with the following in mind: the Interchange should include pedestrian, bicycling, family and human-friendly, and protected infrastructure (covered walkways, traffic lights, signage, over and underpass access). Thank you,

Emily Jakubiak

Subject: Tear Down the Structural Racism of I-81

Dear

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Martha James

August 11, 2021

Mark Frechette, P.E.
Project Director
New York State Department of Transportation, Region 3
333 East Washington Street
Syracuse, NY 13202

Rick Marquis
Division Administrator
Federal Highway Administration
Leo W. O'Brien Federal Building
11A Clinton Avenue, Suite 719
Albany, NY 12207

Dear Mark and Rick:

I am writing to express my concerns with the announcement of the Community Grid as the Department of Transportations preferred option. I am currently employed at the Homewood Suites by Hilton Syracuse-Liverpool, which is located directly off I-81 at exit 25.

I am worried that re-routing I-81 to the current 481 will cause my employer to lose business or close. My schedule and hours are always made based on hotel needs and availability. If the hotel isn't busy enough I could lose hours, ultimately affecting my income.

Everyday our hotel sells anywhere from 5-30 or more additional rooms on the day of arrival. This means guests who did not have a reservation for a particular date, make their reservation on the day they plan to arrive. Some people walk-in to the hotel without a reservation and book a room to stay. Please do not assume that "today's travelers" have planned ahead and know where and when they are staying because of the advancements we've seen in technology. Yes, technology has helped people have unlimited booking options; however, plans change and some people travel alone and cannot safety utilize the technology to make room reservations for themselves while driving. The assumption being made that same day reservations and walk-ins no longer happen in this industry is not based on fact and can have a detrimental effect on my job and income. It is clear and obvious that whomever believes this assumption did not consult with anyone in the hotel industry, especially the hotels located off I-81 in the Town of Salina. Walk-in hotel business and same day reservations (typically made based on location alone) are certainly not a thing of the past and continue to happen daily at hotels all across America. If my hotel were to lose these 5-30 reservations per day because we are no longer located of I-81 it could cost me my job or the jobs of my co-workers. Additionally, it is important to note a large majority of our reservations – in advance or same day of arrival bookings – are made based on our easily accessible location. Most hotels are built next to freeways and Interstate highways for a reason... people want easy access to their travel routes regardless of traveling for business, leisure, passerby, etc.

I implore you conduct more fact based research on how much revenue would be lost from the travel based industry businesses located off I-81, including hotels, gas stations, restaurants and fast food establishments. The Draft Environmental Impact Statement suggests it would only be 1% decline in business. As a person dealing directly with the guests who choose to stay at our hotel because we're right off I-81, I can assure you it's not merely 1%!

Thank you in advance for your consideration.

Sincerely,

Annicia Jamison
Housekeeper
Homewood Suites Syracuse Liverpool

In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.

● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal "SEP 14" local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Astrid Jarvis

Subject: Tear Down the Structural Racism of I-81

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.

● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal "SEP 14" local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Alisa Jimenez

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.

● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

David Johnson

Sharon Millhouse

Subject: Tear Down the Structural Racism of I-81

Dear

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

ATTENTION: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

The value of I81in Syracuse is that it allows a high volume of traffic to move quickly and efficiently. I realize that the condition of the elevated portions of I81 have deteriorated and need to be rebuilt. The community grid proposal to replace I81 in Syracuse will not allow I81 to function in the manner which is needed. Please rebuild I81 in an elevated design that will allow it to function properly.

● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Sarah Johnson

Subject: Tear Down the Structural Racism of I-81

Dear

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, staff, and students at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Meghan Jones

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.

● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal "SEP 14" local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Deborah Kahkejian

Sharon Millhouse

Subject: Tear Down the Structural Racism of I-81

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Mark Frechette, P.E.
Project Director
New York State Department of Transportation, Region 3
333 East Washington Street
Syracuse, NY 13202

Rick Marquis
Division Administrator
Federal Highway Administration
Leo W. O'Brien Federal Building
11A Clinton Avenue, Suite 719
Albany, NY 12207

Dear Mark and Rick:

I am writing to express my concerns with the announcement of the Community Grid as the Department of Transportations preferred option. I am currently employed at the Homewood Suites by Hilton Syracuse-Liverpool, which is located directly off I-81 at exit 25.

I am worried that re-routing I-81 to the current 481 will cause my employer to lose business or close. My schedule and hours are always made based on hotel needs and availability. If the hotel isn't busy enough I could lose hours, ultimately affecting my income.

Everyday our hotel sells anywhere from 5-30 or more additional rooms on the day of arrival. This means guests who did not have a reservation for a particular date, make their reservation on the day they plan to arrive. Some people walk-in to the hotel without a reservation and book a room to stay. Please do not assume that "today's travelers" have planned ahead and know where and when they are staying because of the advancements we've seen in technology. Yes, technology has helped people have unlimited booking options; however, plans change and some people travel alone and cannot safety utilize the technology to make room reservations for themselves while driving. The assumption being made that same day reservations and walk-ins no longer happen in this industry is not based on fact and can have a detrimental effect on my job and income. It is clear and obvious that whomever believes this assumption did not consult with anyone in the hotel industry, especially the hotels located off I-81 in the Town of Salina. Walk-in hotel business and same day reservations (typically made based on location alone) are certainly not a thing of the past and continue to happen daily at hotels all across America. If my hotel were to lose these 5-30 reservations per day because we are no longer located of I-81 it could cost me my job or the jobs of my co-workers. Additionally, it is important to note a large majority of our reservations – in advance or same day of arrival bookings – are made based on our easily accessible location. Most hotels are built next to freeways and Interstate highways for a reason... people want easy access to their travel routes regardless of traveling for business, leisure, passerby, etc.

I implore you conduct more fact based research on how much revenue would be lost from the travel based industry businesses located off I-81, including hotels, gas stations, restaurants and fast food establishments. The Draft Environmental Impact Statement suggests it would only be 1% decline in business. As a person dealing directly with the guests who choose to stay at our hotel because we're right off I-81, I can assure you it's not merely 1%!

Thank you in advance for your consideration.

Sincerely,

Gary Kaljeskie
Houseperson
Homewood Suites Syracuse Liverpool

In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Scott Kallstrom

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

In addition to all of the issues noted below, it is vitally important to:

1. Keep public housing public. There is no reason to turn over publicly owned and publicly controlled resources to private developers. There are many ways to think about mixed-income development. They are not all successful. Evidence and research on renewal efforts are mixed.
2. This is an opportunity to be a model for the rest of the country if done correctly. It requires original thinking, responding to the needs of the community, constructing a sustainable and resource-efficient plan. It requires talent and design and doing what has not been done before.

Protect Land Use

- A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
- Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
- Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

- Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
- Conduct a community health needs assessment.
- Do not use Wilson Park as a staging site for construction or construction materials.
- Create a Community Restoration Fund.
- Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for

people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that still persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. However, the plan ignores the history and the current needs of the environmental justice community that lives adjacent to the viaduct that will be demolished.

It doesn't have to be this way. The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should reflect the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use
- A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81.
- Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
- Conduct a new analysis of land use that adequately considers the trends of the environmental justice community that lives adjacent to the raised viaduct.
- Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth
- Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
- Conduct a community health needs assessment.
- Do not use Wilson Park as a staging site for construction.
- Create a Community Restoration Fund.
- Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
- Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity
- Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent to Black and Brown Syracuse residents.
- Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
- Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children
- Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
- Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
- Conduct a study to determine if the community grid will remain a major roadway, defined as one used by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

michele kaplan

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.

● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Marion Kaselle

Subject: Tear Down the Structural Racism of I-81

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring

requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.

● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Robert Kavee

Subject: Tear Down the Structural Racism of I-81

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that still persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. However, the plan ignores the history and the current needs of the environmental justice community that lives adjacent to the viaduct that will be demolished.

It doesn't have to be this way. The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should reflect the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use
- A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81.
- Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
- Conduct a new analysis of land use that adequately considers the trends of the environmental justice community that lives adjacent to the raised viaduct.
- Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth
- Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
- Conduct a community health needs assessment.
- Do not use Wilson Park as a staging site for construction.
- Create a Community Restoration Fund.

● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity
● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent to Black and Brown Syracuse residents.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children
● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, defined as one used by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also

provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Sheila Kelley

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also

provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

William Kennedy

Subject: Tear Down the Structural Racism of I-81

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

ATTENTION: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

Dear Mark Frechette (NYS DOT) and Rick Marquis (FHA):

Have you or anyone in authority contacted the Florida DOT about the Ultimate I4 project which is a 21 mile reconstruction of the existing interstate with 4 express toll lanes added in the median?
The reason I am asking is that I4 bisects downtown Orlando, and no one in Orlando complains about I4 dividing the city like Syracusans say I81 divides Syracuse.
Please consider contacting the Florida DOT and asking them why an expansion of I4 helps Orlando and the surrounding communities, and why I4 running down the middle of Orlando does not divide their city. Syracuse Mayor Ben Walsh could talk to Orlando Mayor Buddy Dyer, and Onondaga County Executive Ryan McMahon could talk to his counterpart in Florida, Orange County Mayor Jerry Demings. The community grid option and rerouting I81 to the east replacing I481 seems a step backward and not a step forward into the future.

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal "SEP 14" local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and

staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Carley Kiernan

Re: I-81

Dear Mr. Frechette:

My name is Steve Kimatian. I am a resident of the city of Syracuse. Over the years of I-81 discussion, I've spoken to literally hundreds of city residents on the issue of elevated or grid. I can tell you unequivocally that the great majority of city residents who listen to the benefits of a grid or elevated do not want a grid. That includes the minority community.

So, you might ask, where does the grid support come from? Apparently, some elected officials are using the negative impact 50 years ago of the decision to build an elevated I-81 through the 15th Ward as justification to say the decision should be a grid now. Going with a grid now will "reverse the racial injustice," they say. Even if elevated was the wrong decision over 50 years ago does not make going with a grid now the right decision. This is totally illogical. This is a different time and place with different conditions. And whether elevated or grid

is the decision, the needs of the minority community should be addressed either way.

DOT says they want input from the public. Yet, when they receive the input, they refuse to follow it. A referendum would prove it. We know our community, DOT does not know it as we do; we live in it; we drive the streets, use the highways and we have decades of cumulative knowledge; we know what will grow the economy; we know what creates a better environment, a safer and more livable city. DOT should be on the side of everyday citizens. There is also an obvious reason why this discussion has gone on for over ten years; because the public is being asked to agree to a project they know is wrong, so it is resisted, and better options are proposed.

Most believe a city of the future should emphasize pedestrians, bicycles, the economy, less air pollution, and less congestion of vehicles. The grid adds to traffic congestion, the idling of tens of thousands more vehicles creates more pollution and pedestrians and bicycles face increased danger from more vehicles at even faster speeds. Where is the merit for a grid here? This is jamming the opinion of DOT and a few elected officials down the throats of the citizens of Syracuse and Onondaga County. For economic growth, transportation arteries that allow for speed and cost effectiveness make the region most attractive. We have one of the most elegant highway intersections with the crossroads of I-81 and I-90. To remove a chunk of I-81 roadway from the smooth flow of traffic creates a clunky configuration unnecessarily disruptive to traffic.

Some say the grid will encourage more people to live in the city, particularly millennials. There is minimal justification to believe that having a grid or not will encourage people to live in the city. We have apartments and condos going up at a rapid pace with seemingly no roadblock to their continuing, and that is with an elevated I-81. Further, for those coming to the city from the surrounding county, there will be tens of thousands of additional cars crowded onto city streets.

Mayor Walsh's administration is perhaps the best argument as to why a grid is not a requisite to improve the economy. Syracuse has brought in citywide 5G, been designated a Smart Cities Microsoft Hub, grown the Tech Garden and created job growth with JMA Wireless, attracted companies like Amazon, offices of global banks and increased healthcare providers. All this has been done with an elevated I-81. Some say a grid option would offer more land to develop, yet the DOT Viaduct charts show there would only be a minimal number of small lots commercially insignificant.

Bottomline, the argument for a grid option is built on faulty reasoning. The grid has been rejected for over ten years. A debacle by any other name is still a debacle. Not many cities have a chance to get two 50-year decisions wrong, but Syracuse is on the verge of another 50-year mistake.

Respectfully submitted,

Steve Kimatian

Mark, you & Rita expressed interest about George Kessler's 'boulevard system' plans for Syracuse.

Could you pass this on for Rita, and anyone else interested?

Thanks and best, Peter King. Phone = 315-560-3019

Hi Mark and Rita,

I said I would send on some links about the famous Landscape Park planner George Kessler's 'Park Boulevard System' plan for Syracuse.

Note, I am also submitting all this content in my complete comments later this month.

Peter King, Phone = 315-560-3019

Kessler is well-known for planning these 'boulevards' for other US cities including Kansas City MO, Dallas, Indianapolis, Cincinnati, and others. Here are some overviews...

* Wikipedia has an overview = https://en.wikipedia.org/wiki/George_Kessler

* Kessler website from the 'Kessler Society Of Kansas City' = http://georgekessler.org/

* Kessler's boulevards in Kansas city, Missouri, become an inspiration & basis for a regional walking / bicycling greenway planning initiative in Missouri, called 'MetroGreen'. = https://www.marc.org/Environment/MetroGreen-Parks/About/History

Kessler's 'Park Boulevard System' for Syracuse.

Syracuse historian and author Paul Pfanz alerted me about an Kessler 'trivia' point for Syracuse = THe City had initially hired Kessler for designing the City park system, and linking all main Syracuse parks by a tree-lined scenic 'boulevard'. Paul also mentioned, Kessler's plans were lost, maybe somewhere in City Hall.
I did find a complete description of Kessler's 'Park Boulevard System' in the City's first Comprehensive Plan, dated 1919.

* Landing page about Syracuse Comprehensive plans on 'Syracuse Then and Now' >> http://syracusethenandnow.org/ComprehensivePlan.htm

* 1919 plan, direct document link > http://syracusethenandnow.org/CompPlan/Syracuse1919ComprehensivePlan.pdf
Kessler's 'Park Boulevard System' (pages 17-18 of 64 in the PDF) ... also included an early 'Loop the Lake' concept.

This is preceded by details on Kessler's 'Onondaga Creek Parkway', which was the only part of Kessler's boulevard which the City finally implemented. (pp.13-17 of 64 in the PDF)

Kessler proposed linked the South Side and the University Area with a boulevard along Kennedy Street, and up through Oakwood.

In searching old Syracuse news, I found from ~1905 through ~1920 many Syracusans seemed keen on implementing Kessler's boulevards. I also found a 'back story' on Kessler's being hired, in a 1991 document prepared for establishing areas in Syracuse on the 'National Register for Historic Places. Here is that link =>
* The Historic Designed Landscapes of Syracuse, New York
https://npgallery.nps.gov/NRHP/GetAsset/NRHP/64500453_text
So in the late 1800s, Charles Mulford Robinson was a pundit from Rochester sometimes credited with coining and writing about the term 'City Beautiful'. Apparently, some Syracuse 'City Beautiful' advocates asked Robinson for suggestions on how the city could improve. In a series of articles, Robinson lambasted the City for not doing decent planning, and just letting developers put whatever, wherever, however. For curing this problem, Robinson suggested creating a City Parks Commission, and hiring a Landscape Planner draft a system plan, linking the parks by scenic 'parkways' aka 'boulevards'. The City formed a Park Commission, hired George Kessler, who completed this plan in 1907. Note, most of the parks seemed already in place, and so then Kessler contributed his organizing expertise. But however much support this plan had, Kessler's boulevard was

eventually cancelled, maybe for tax reasons. (the above condensed from pp.109-112)
There is a similar narrative posted on the Kansas City Kessler Site I link on above.

* Home Specific Projects Miscellaneous New York—Syracuse—Lower Onondaga Park

http://georgekessler.org/index.php?option=com_content&view=article&id=221

For years SUNY-ESF Landscape Architect professor Emanuel Carter suggested similar ideas. Now I know one likely source for his inspiration!

Also worth noting a more recent data point for supporting bicycle / ped linkage within the DEIS.
In May 1998, the ~4k attendees at the 1st 'FOCUS Greater Syracuse' Visioning Fair voted for one clear winning idea,

"Build bicycle paths, hiking trails and walkers' paths throughout the county."

(Post-Standard, Syracuse, NY. May 6, 1998. 'AND THE FOCUS WINNER IS ... MORE BICYCLE PATHS VISION FAIR VISITORS CHOSE THEIR TOP 15 WAYS TO IMPROVE THE COMMUNITY'. Author/Byline: RICK MORIARTY The Post-Standard Edition: Metro Section: Local News Page: B1)

Subject: Tear Down the Structural Racism of I-81

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Douglas Kinney

In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Douglas Kinney

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

- A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
- Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
- Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

- Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
- Conduct a community health needs assessment.

● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal "SEP 14" local hiring pilot program, and limit the hiring requirements to Syracuse residents. Dear Mark Frechette,

Thank you for the opportunity to add to the conversation concerning the re-routing of Interstate 81 and the creation of a community grid system in the city of Syracuse.

I do not believe that all the necessary changes are being addressed in the widening of the current Interstate 481. My concerns are:

- **Both on-ramps at the Jamesville Road interchange are too short to allow heavy truck traffic to merge without major disruptions and accidents happening.**

  Our company is one of several who have fleets of heavy vehicles using the same exit/on ramps as Hanson Aggregates, Barrett Paving Materials, and B&B Lumber to name a others. A typical summer day sees **700-800 trucks** using the Jamesville interchange. Traffic at this interchange will obviously grow significantly and become more crowded as more traffic shifts to what will be route 81.

  As it stands, the interchange is ill-constructed given the number of construction and heavy vehicles that use those on-ramps. As a business owner of a fleet of dump trucks who has many additional customers hauling products to and from our quarry location off Jamesville Road, I can say with confidence that the on-ramps both heading north and south on the interstate merge into traffic far too abruptly, hardly allowing trucks to get up to highway speeds. Despite a safety record we are proud of, this location is the foremost site where several car drivers register complaints about too-short merging and truck speeds slowing the free flow of traffic.

  My suggestions are:

  1. 481 southbound on ramp at Jamesville Road should be extended to the railroad bridge to allow heavy trucks to get up to speed and merge more fluently.
  2. 481 northbound on ramp be extended to the Fayetteville East bound exit making this lane an on ramp/exit only lane. This too will allow heavy trucks to get up to speed and merge more fluently and allow cars to exit 3E easier.

I appreciate that this project is one of the largest highway projects in central New York in decades, and hope that these considerations will be included in plans so that the adjusted I-81 can function well for many decades for individuals and businesses alike.

I would be glad to share more specifics based on our company's experience should you think that it might prove useful in trying to accommodate the needs of so many highway users. Please feel free to contact me.

Sincerely,

Thomas Kinsella

Att: Mark Frechette, P.E., Project Director
New York State Department of Transportation, Region 3
333 E. Washington Street
Syracuse, NY 13202

As a senior citizen and long time resident of Syracuse, I travelled from Syracuse to Chicago, IL on Route 20 before the Interstate Road System was constructed. There were numerous villages and small towns along the route which added considerably to the travel time. President Eisenhower was a proponent of the Interstate Road System which featured 4 lanes, limited access, and direct routing where possible. There is a tendency for progressive systems, such as the Interstate Highways, to be subverted to serve other causes. For example, take a trip on I-481 from Syracuse to Oswego, NY. The first part of the trip is on a typical limited access Interstate Highway to the southern edge of Fulton, NY. The trip through Fulton is on a basic, two lane road reminiscent of an earlier day. The reason for not continuing the construction of I-481 along County Route 6, instead of into Fulton, is unknown to me.

Recently, I have read of a plan to convert I-481 into a section of I-81 east of Syracuse. This will amount to making that section of I-81 a detour of the former direct section of I-81 in the city.
Such a detour is not in agreement with the original design of Interstate Highways ?

In the original construction of the Interstate Road System, I'm sure there were a great many farmers who were unhappy to see some of their acres converted into an Interstate Roadway. However, the roads were built and serves the greater good of the country.

Other points which don't seem to be receiving attention include 1) I-690 on it's elevated roadbed divides the city into north and south sections, however. only the east west division by the present I-81 seems objectional ?, 2) Three large medical facilities benefit from rapid access from north and south from I-81 and they have created suitable parking facilities. These medical facilities are the largest employers in the city and a rebuild of I-81 should be of high priority. 3) Small improvements in access to the medical facilities would be helpful and also improvement in appearance such as concrete facades.

The Interstate Highways are a marvelous contribution to the welfare of our country and I hope they can be maintained and further improved.

George M. Kirkpatrick, P.E.

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.

● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Timothy Kirk

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Florian Klein

Sharon Millhouse

To: dot.sm.mo.I81Opportunities <dot.sm.mo.I81Opportunities@dot.ny.gov>

ATTENTION: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

Good morning,

After reviewing your plans for the i81 revamp into this new grid system I have a few concerns. The biggest are what this will do the flow of traffic and the amount of time it will navigate through the city. I81 is the busiest roadway in our area. I cannot even begin to estimate the Mount of traffic that passes through in each day. To reduce the speed by 20mph and incorporate regular traffic lights/circle you will be creating a traffic nightmare. I am envisioning cars backed up for hours at each intersection. The amount of time this will add to our daily commute will be astronomical.

I do not understand turning the highway into a regular city street. We already have hundreds of those. We need a highway that can quickly move us through the city and onto our destination. For those who want a more scenic route there are already plenty of options.

Best Regards,
Shannon Klonowski

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.

● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Pete Klosterman

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Shaun Knutsen

In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Stacey Koff

Subject: Tear Down the Structural Racism of I-81

Dear

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.

● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Sharon Kollar

Hi - I live in the Valley section of Syracuse with convenient I-81 access. I'd like to voice my support for the community grid option. I feel the business and suburban officials have incorrect and overblown concerns about the removal of the viaduct. The transportation engineers are capable of designing an efficient system. Fear of change and something different drives the opponents. Everyone will adapt. The viaduct is an eyesore and will be way too big to be redone safely.
Thank you, Dean Kolts

Subject: Tear Down the Structural Racism of I-81

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Roy Koshy

Subject: Tear Down the Structural Racism of I-81

Dear

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

James M Kozlik

Sharon Millhouse

Subject: Tear Down the Structural Racism of I-81

Dear

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. Subject: Tear Down the Structural Racism of I-81

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Pamela Krimsky

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Arthur Kunhardt

However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also

provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Claire Laborde

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal "SEP 14" local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and

staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Michael Lane

● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Eric Larson

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Patricia Lawrence

Subject: Tear Down the Structural Racism of I-81

Dear

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.

● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Robert Lee

Subject: Tear Down the Structural Racism of I-81

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.

● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Ernest Lehrer

Route 81 Project - A Request

Elizabeth Leich <e.leich.dc@gmail.com>

Fri 9/3/2021 1:28 PM

To: dot.sm.mo.I81Opportunities <dot.sm.mo.I81Opportunities@dot.ny.gov>

ATTENTION: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

My name is Elizabeth Leich I live at 326 Kirsch Drive Mattydale, NY. I'm in agreement with the proposed Route 81 plan, and I know that a lot of time and thought has gone into the planning.

I would like to add a request, on behalf of all the people living in the area in which I live. I'm requesting that a sound barrier wall be placed along the border of the Roxboro Middle school campus ground which borders Route 81 North heading toward the Mattydale exit. This is the land that borders the back of Roxboro Middle school from the end of Kirsch Drive to the swimming pool area at the Orchard Estates Apartment complex.

The reason for my request is that the noise level has been steadily increasing over the years and the grounds of Roxboro school serve as an echo chamber causing the noise to go right into the homes of the people who live on the north side of Kirsch Drive as well as the people living at the very end of Kirsch Drive in the 400 block, in Mattydale. I strongly suspect too that the highway sound level has a negative effect on the school children at Roxboro Middle school.

I ask that representatives from the New York State Dot visit the field/ grounds behind Roxboro Middle school to evaluate the continual sound level and the effects on nearby residents and on the school. The noise of the traffic is 24/7, and depending on the type of vehicles will increase, this affects the sleep of residents. I extend an open invitation to you to visit my home at any time at 326 Kirsch Drive and go to my backyard and evaluate the sound level. I would let your representatives stand inside my home to evaluate the sound level.

Please consider this to be a serious quality of life / healthy life issue for those families living on the north side of Kirsch Drive along the border of Roxboro field.

Sincerely,
Elizabeth Leich

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Acknowledge Onondaga Nation's Concerns

● The vast majority of the I-81 project is located on the treaty-protected lands of the Onondaga Nation.
● Areas of the project intersect with areas of known cultural significance to the Onondaga

Nation and have a high probability of containing cultural artifacts or ancestral remains.
● The Onondaga Nation repeatedly requested in the official correspondence included in this EIS that proper respect and protocols be used to ensure that ancestral remains are not disturbed in the construction of the project.
● I ask that NYSDOT and SHPO adopt the recommendations of the Onondaga Nation, including but not limited to:
- Hiring multiple Cultural Resource Monitors from and trained by the Onondaga Nation to be present at all ground disturbing activities
- Using the proper terms to refer to the Onondaga Nation and its people.
- To stop work and notify the Onondaga Nation promptly upon the discovery of any human remains. This practice ensures that, if the remains are Haudenosaunee, proper protocols are followed throughout the investigation process.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.

My desire is for a broad comprehensive replacement solution for I-81 that takes into consideration our entire community's needs, for both city and suburban residents, raging from commerce, commutation, public safety and quality of life.

I support a hybrid solution in whatever form that would combine a community grid with a thoroughfare that keeps the north-south traffic flowing and interstate traffic off the streets of the city. A community grid-only option would hurt a significant business sector that has developed around the current viaduct as well as create additional and unnecessary traffic congestion due to rerouting of roadways.

● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Mary Lester

Subject: Tear Down the Structural Racism of I-81

Dear

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Susan Levy

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also

provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Marva Lilly

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.

● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal "SEP 14" local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Mitchell J. Liquori
305 Twin Elms Lane
North Syracuse, NY 13212

Mark Frechette
Project Director
NYS Department of Transportation, Region 3

Dear Mr. Frechette,

We are reaching out in regards to the "Community Grid" plans for Interstate 81, and the fact that they exclude the Town of Salina's needs. I am an employee of the Town of Salina, for more than ten years now performing Maintenance Services for PDM Estates. I try my best to be an active member of the community, and stay up to date on current events within the area as I am commuting here five out of seven days a week.

In my opinion, "The Grid" is going to undesirably impact the Town of Salina, and the community as the road improvements are happening all around us, yet overlooking necessary improvements at the Northern most trafficked intersection of I-81 in the Town of Salina. The interchange here is ugly, unwieldly, obstructs the view of the Onondaga Lake, and not to mention is a danger to the pedestrian traffic in the area. As the years have gone by, this intersection has only gotten worse, and it would be wonderful to see some developments in the near future.

As an employee in the Town of Salina, I am asking New York State to consider improvements near the Parkway, in hopes that they will spur economic activity, make the entrance to the town more attractive, and by removing the divisions, make the area more pedestrian friendly.

I hope that you seriously take these requests into consideration, not just for myself, but for all of the residents and employees in the Town of Salina.

Sincerely,

Mitchell J. Liquori

● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Cynthia Liss

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.

● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

ATTENTION: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

Many thanks for the numerous opportunities you've provided for local citizens to give input on changes to Route 81 in Syracuse.

I have read as much as I can about plans to replace I81 in our area and have attended several meetings and community forums. What I learned has led me to strongly support the community grid plan. I hope you will not be deterred by the narrow commercial interests that lobby to replace the I81 viaduct along its current footprint. I believe the community grid will provide better transportation options, greater health benefits and more opportunities for our city and its residents.

I have been concerned about the proposed round-about being so close to King School and know alternatives are being explored. Please follow through on job training so local residents can benefit from the work opportunities this massive project will provide. Health and safety of those who live near the highway and drivers, pedestrians and bicyclists who use the community grid should be of paramount importance. The design should help us to improve bus transport including rapid bus transit lanes that have been successful in other cities.

Thank you for the opportunity to comment.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Elaine Livingston

Sharon Millhouse

the point of the letter. This anonymous intimidation tactic is designed to deflect from the fact that the many alternatives to the Community Grid have all been evaluated and scrutinized extensively. What the 28,000-page Draft Environmental Impact Statement (DEIS) affirms is that all of these alternatives would result in vastly more property seizures, more demolition of existing buildings and increased health and socio-economic harm to our community, including the fact that greater traffic from a high-speed highway through the city's poorest neighborhoods means higher asthma rates for their kids.

The decision to build I-81 in its current location back in 1960 was about race, class and privilege. Fortunately, in 2021 we know better than to build, or rebuild, a highway through the heart of our city.

To: David Smith <i81opportunities@dot.ny.gov>

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Rev John Long

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Ericka Lopez

Sharon Millhouse

ATTENTION: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

Sirs:

Can you please explain to me why you have scheduled additional public hearings in places like Salina, Cicero and Camillus where the loud mouths on the payroll of Destiny Mall are concentrated but will not be affected in the slightest by the proposed changes, but not one single session in the town of Dewitt, the town the new traffic pattern will be most affect?

You are giving far too much time to a very small group of well funded opponents of the community grid, and no time at all to supporters of the community grid who need to know what will be done about Exit 3 E/W, Lyndon Corners and Genesee Street in front of Wegmans.

Yes, can you explain this?

Thank you.

Peter Lotto

● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Erin Lowe

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.

● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

Leahann Lynagh
925 7th North Street, OFC
Liverpool, NY 13088

Mark Frechette
Project Director
NYS Department of Transportation, Region 3

Dear Mr. Frechette,

I am reaching out in regards to the "Community Grid" plans for Interstate 81, and the fact that they exclude the Town of Salina's needs. My place of employment, PDM Estates, is located on 7th North Street in the Town of Salina. I have worked as an Accountant and Office Manager for over six years for Pascarella Development, being an active member of the community, and staying up to date on current events within the area and neighboring areas as well.

I feel that "The Grid" is going to negatively impact the Town of Salina, and the community as the road improvements are happening all around us, yet overlooking necessary improvements at the Northern most trafficked intersection of I-81 in the Town of Salina. The interchange here is ugly, cumbersome, obstructs the view of the Onondaga Lake, and not to mention is a danger to the pedestrian traffic in the area.

As an employee in the Town of Salina, who commutes from outside the city limits five out of seven days a week, I felt it was necessary to voice my opinion. We are asking New York State to consider improvements near the Parkway, in hopes that they will spur economic activity, make the entrance to the town more attractive, and by removing the divisions, make the area more pedestrian friendly.

I hope that you take these requests into consideration, not just for myself, but for all of the residents and employees in the Town of Salina.

Thank you for your time.

Sincerely,

Leahann Lynagh, Office Manager

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also

provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Davona Lynch

Sharon Millhouse

● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.

● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal "SEP 14" local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Mike M.

Subject: Tear Down the Structural Racism of I-81

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring

requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. August 11, 2021

Mark Frechette, P.E.
Project Director
New York State Department of Transportation, Region 3
333 East Washington Street
Syracuse, NY 13202

Rick Marquis
Division Administrator
Federal Highway Administration
Leo W. O'Brien Federal Building
11A Clinton Avenue, Suite 719
Albany, NY 12207

Dear Mark and Rick:

I am writing to express my concerns with the announcement of the Community Grid as the Department of Transportations preferred option. I am currently employed at the Homewood Suites by Hilton Syracuse-Liverpool, which is located directly off I-81 at exit 25.

I am worried that re-routing I-81 to the current 481 will cause my employer to lose business or close. My schedule and hours are always made based on hotel needs and availability. If the hotel isn't busy enough I could lose hours, ultimately affecting my income.

Everyday our hotel sells anywhere from 5-30 or more additional rooms on the day of arrival. This means guests who did not have a reservation for a particular date, make their reservation on the day they plan to arrive. Some people walk-in to the hotel without a reservation and book a room to stay. Please do not assume that "today's travelers" have planned ahead and know where and when they are staying because of the advancements we've seen in technology. Yes, technology has helped people have unlimited booking options; however, plans change and some people travel alone and cannot safety utilize the technology to make room reservations for themselves while driving. The assumption being made that same day reservations and walk-ins no longer happen in this industry is not based on fact and can have a detrimental effect on my job and income. It is clear and obvious that whomever believes this assumption did not consult with anyone in the hotel industry, especially the hotels located off I-81 in the Town of Salina. Walk-in hotel business and same day reservations (typically made based on location alone) are certainly not a thing of the past and continue to happen daily at hotels all across America. If my hotel were to lose these 5-30 reservations per day because we are no longer located of I-81 it could cost me my job or the jobs of my co-workers. Additionally, it is important to note a large majority of our reservations – in advance or same day of arrival bookings – are made based on our easily accessible location. Most hotels are built next to freeways and Interstate highways for a reason... people want easy access to their travel routes regardless of traveling for business, leisure, passerby, etc.

I implore you conduct more fact based research on how much revenue would be lost from the travel based industry businesses located off I-81, including hotels, gas stations, restaurants and fast food establishments. The Draft Environmental Impact Statement suggests it would only be 1% decline in business. As a person dealing directly with the guests who choose to stay at our hotel because we're right off I-81, I can assure you it's not merely 1%!

Thank you in advance for your consideration.

Sincerely,

BJ Mack

Reply-To: Scott Mackin <smackin001@verizon.net>

ATTENTION: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

I support the rebuild of I-81 but the removal of the main highway through the city makes another issue worse. Please consider a regulation to limit cross state truck traffic on secondary roads through the Finger Lakes. The main focus is the garbage haulers from downstate to Seneca Meadows. Maybe some relief on Thruway tolls will help. This has to be the reason the trucks choose to shift and climb through the narrow roads, hamlets and villages along the way.

Thank you for your consideration,
Scott Mackin

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.

● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal "SEP 14" local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Benjamin MacKrell

● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Edward Madory

Subject: Tear Down the Structural Racism of I-81

Dear

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

V. James Magnarelli
Deputy Supervisor
Town of Salina

To Our NYS Representatives:
I am writing over my concern of the selection of the Grid Option to replace the I81 viaduct. The decision to remove the viaduct and reroute thru traffic to 481 from Clay to Nedrow is being made with little to no consideration of the impacts this will have on Northern Towns. Many businesses (hotels, restaurants, truck stops) have grown in proximity to the I81 and I90 ramps taking advantage of the traffic patterns in that locale. The Seventh North Street corridor, which is in my home District, has 11 hotels 4 filling stations and multiple eating places (McDonalds, Tully's, Burger King, Denny's, Subway, Dunkin Donuts, KFC, Little Ceasars) all within a mile and a quarter stretch.
Studies performed by these businesses all show that the rerouting of traffic around the City of Syracuse would cause approximately a 30% decrease to revenues. The only option business owners have to could mitigate this loss is by reducing staff and laying off workers.
To date I have heard of no State Representative who has reached out to these business owners with a workable solution to this loss of commerce.
The reduction of property assessments to these businesses due to revenue loss will have to be picked up by residents in the way of higher tax rates.
I sincerely implore those who are making this critical decision for the residents of Central New York, to delay the final determination until all concerns are weighed equally and those entities which are negatively impacted have a mitigation plan to save businesses and jobs.
Thank you for listening.

Subject: I81 Opinion

To Whom it May Concern,

I think that tearing down the I81 is a wonderful idea. The Community Grid Plan looks good. I hope that Almond Street will not resemble unwelcoming Erie Blvd. I think that would include a 30 mph speed limit and integrating pedestrians into the traffic flow. Pedestrian signals that are a part of the traffic light cycle, not a button to push asking permission to enter the car's domain.

I hope that the money behind Destiny USA will not be given more consideration than the voices of citizens. We should not make any concessions to a failing mall that pays zero taxes. Let's look to the future, not the past.

● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Edmond Malone

Sharon Millhouse

Subject: Tear Down the Structural Racism of I-81

Dear

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Subject: Tear Down the Structural Racism of I-81

Dear

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Jack David Marcus

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.

● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal "SEP 14" local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

CHRISTINE MARQUETTE

Sharon Millhouse

Subject: Tear Down the Structural Racism of I-81

Dear

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

CHRISTINE MARQUETTE

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also

provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Glenn Martin

Subject: Tear Down the Structural Racism of I-81

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Geraldine Maslanka

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Larissa Matthews

Subject: Tear Down the Structural Racism of I-81

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
