To: David Smith <i81opportunities@dot.ny.gov>

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Andrew Abate

REVISED COMMENT

TO: Mark Frechette, NYS DOT Region 3
Rick Marquis, FHWA Administrator, Albany, NY

Onondaga County Executive, Ryan McMahon

Syracuse Mayor, Ben Walsh
NYS US Congressman John Katko
NYS US Senator Chuck Schumer
NYS US Senator Kristen Gillibrand
NYS Assembly Member Pamela Hunter
NYS Senator John W. Mannion
Town Supervisor Edward Michalenko
RE: I-81

I have been attending the I-81 Project meetings from the beginning of the public forums. I have written many comment sheets, but I have never received any feedback. I'm again going to write my thoughts. The hybrid plan preserves the vital high speed route through the CENTER OF THE REGION as well as simultaneously allowing the community grid for passage and activities.

Some of the many reasons for choosing the hybrid plan are:
1. The I-81 expressway connects ALL areas in all directions.

2. Eliminating 1.5 miles of the direct north-south corridor
   A. Will discourage business from and with the city

B. It will make commuter nightmares for area residents

C. It will NOT help the south side areas "connect" with other areas; i.e. the environmental justice issues will not be resolved because it will not change the lives or living conditions of the south side residents nor the disenfranchised.

D. The western side of the city will have NO connection with I-81 N or S

3. The 1.5 miles of the community grid (without the I-81 expressway) would be like creating an Erie Boulevard through the city; the result would be

A. Increased congestion on city and neighborhood streets that were never meant to handle heavy traffic

B. 8,000+ employees will be jammed onto the "Grid" that will be like an Erie Boulevard

C. It would negatively impact the local economy, small businesses and jobs throughout the region because it would divert business traffic around the city

D. The slow traffic (stop and go traffic) in a community grid would increase the hydrocarbons and slow down any EMS & 1st responders' efforts as well as commuter time

E. The community grid alone is NOT efficient.

F. Postal carriers, delivery services, repair services, medical services, students, IT and maintenance workers, vendors and suppliers need the I-81 North- South connection.

G. Rt. 690 will also be affected negatively. Rt.690 will end putting traffic onto Genesee and West Street as well as Crouse & Irving

H. The community grid by itself will create GRID LOCK!

4. Rt. 481 is already at full capacity.

5. Using Rt. 481 will take business away from the city.

6. I-81 is part of the Federal Highway system. It services out of state citizens, local citizens, NY state citizens, as well as international citizens like Canadians.

I-81 serves as our national defense, trade and interstate shipping & commerce

7. I-81 can be compared to other Federal Highways like I-95 through Richmond, VA; like I-95 through Jacksonville, FL; like I-75 through Atlanta,

GA; like I-75 through Macon, GA; like I-5 through Seattle; like I-83 through Harrisburg, PA; like I-95 through Philadelphia; like I-75 through Detroit, MI; like I-25 through Denver, CO; like I-95 and I-83 through Baltimore, MD. Examples are seen nationwide.

At this point, I'm not only disappointed but discouraged with the path that has been "pushed" from the beginning of this project. It appears to the average resident that all the meetings, surveys and publications were "smoke and mirrors". The "powers that be" have always leaned toward the 1.5 mile community grid and eliminate I-81.

The "powers that be" have NOT listened listened to the Town Supervisors, to the local communities/cities/villages in all directions, to Police, Fire & 1st responders, to the residents of Syracuse city. PLEASE stop the charade cloaked in these public meetings.

It's time to make a better, more sensible decision.
*Go with the Hybrid model.
*Rebuild I-81 with the Community Grid below I-81
***Keep the important I-81 North-South connection corridor and create the Community Grid under the I-81 expressway**

ADDITIONALLY...The area of housing west of I-81 and south of Colvin Street needs to be revitalized with better and more affordable housing for the disenfranchised.

A Concerned Resident,
Linda Adsitt

Sent from my iPad

I have been attending the I-81 Project meetings from the beginning of the public forums. I have written many comment sheets, but I have never received any feedback. I'm again going to write my thoughts.

The hybrid plan preserves the vital high speed route through the CENTER OF THE REGION as well as simultaneously allowing the community grid for passage and activities.

Some of the many reasons for choosing the hybrid plan are:

1. **The I-81 expressway connects ALL areas in all directions.**
2. **Eliminating 1.5 miles of the direct north-south corridor**
   - **A. Will discourage business from and with the city**
   - **B. It will make commuter nightmares for area residents**
   - **C. It will NOT help the south side areas "connect" with other areas; i.e. the environmental justice issues will not be resolved because it will not change the lives or living conditions of the south side residents nor the disenfranchised.**
   - **D. The western side of the city will have NO connection with I-81 N or S**
3. **The 1.5 miles of the community grid (without the I-81 expressway) would be like creating an Erie Boulevard through the city; the result would be**
   - **A. Increased congestion on city and neighborhood streets that were never meant to handle heavy traffic**
   - **B. 8,000+ employees will be jammed onto the "Grid" that will be like an Erie Boulevard**
   - **C. It would negatively impact the local economy, small businesses and jobs throughout the region because it would divert business traffic around the city**
   - **D. The slow traffic (stop and go traffic) in a community grid would increase the hydrocarbons and slow down any EMS & 1st responders' efforts as well as commuter time**
   - **E. The community grid alone is NOT efficient.**
   - **F. Postal carriers, delivery services, repair services, medical services, students, IT and maintenance workers, vendors and suppliers need the I-81 North-South connection.**
   - **G. Rt. 690 will also be affected negatively. 690 will end putting traffic onto Genesee and West Street as well as Crouse & Irving**
   - **H. The community grid by itself will create GRID LOCK!**
4. **Rt. 481 is already at full capacity.**
5. **Using Rt. 481 will take business away from the city.**

6. **I-81 is part of the Federal Highway system. It services out of state citizens, local citizens, NY state citizens, as well as international citizens like Canadians.**
   I-81 serves as our national defense, trade and interstate shipping & commerce
7. **I-81 can be compared to other Federal Highways like I-95 through Richmond, VA; like I-95 through Jacksonville, FL; like I-75 through Atlanta, GA; like I-75 through Macon, GA; like I-5 through Seattle; like I-83 through Harrisburg, PA; like I-95 through Philadelphia; like I-75 through Detroit, MI; like I-25 through Denver, CO; like I-95 and I-83 through Baltimore, MD. Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.

● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal "SEP 14" local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Jean Agni

ATTENTION: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

I support removing the viaduct through downtown Syracuse. I frequently drive between Syracuse and Maryland and at no other place does the highway go through the center city.

My concerns:
The roundabout near M.L. King School should be moved away from the school. The roundabout is an excellent way to slow down traffic.

Traffic in the DeWitt-Lyndon Corners area. Extending I690 as a two-lane limited access road to at least North Burdick St and ideally to NYS290 at Manlius Center with an interchange at North Burdick should move some of the traffic going to Fayetteville and east out the NYS5-92 corridor.

Large trucks coming from the south and going west from Syracuse. Extend the present NYS5 that ends at West Genesee St around the south and west sides of the city. I understand the concern that truckers have about going around the east side of the city to then go west but the trucks are too big to be passing through many of the communities between Cortland and Auburn especially where turns are involved.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Jennifer Alberghini

Joni Steigerwald

Subject: Tear Down the Structural Racism of I-81

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Linda Allen

However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Gabino Alvarez

Subject: Tear Down the Structural Racism of I-81

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. Albany, NY 12207

Dear Mark and Rick:

I am writing to express my concerns with the announcement of the Community Grid as the Department of Transportations preferred option. I am currently employed at the Super 8, which is located directly off I-81 at exit 25.

I am worried that re-routing I-81 to the current 481 will cause my employer to lose business or close. My schedule and hours are always made based on hotel needs and availability. If the hotel isn't busy enough I could lose hours, ultimately affecting my income.

Everyday our hotel sells anywhere from 5-30 or more additional rooms on the day of arrival. This means guests who did not have a reservation for a particular date, make their reservation on the day they plan to arrive. Some people walk-in to the hotel without a reservation and book a room to stay. Please do not assume that "today's travelers" have planned ahead and know where and when they are staying because of the advancements we've seen in technology. Yes, technology has helped people have unlimited booking options; however, plans change and some people travel alone and cannot safety utilize the technology to make room reservations for themselves while driving. The assumption being made that same day reservations and walk-ins no longer happen in this industry is not based on fact and can have a detrimental effect on my job and income. It is clear and obvious that whomever believes this assumption did not consult with anyone in the hotel industry, especially the hotels located off I-81 in the Town of Salina. Walk-in hotel business and same day reservations (typically made based on location alone) are certainly not a thing of the past and continue to happen daily at hotels all across America. If my hotel were to lose these 5-30 reservations per day because we are no longer located of I-81 it could cost me my job or the jobs of my co-workers. Additionally, it is important to note a large majority of our reservations – in advance or same day of arrival bookings – are made based on our easily accessible location. Most hotels are built next to freeways and Interstate highways for a reason... people want easy access to their travel routes regardless of traveling for business, leisure, passerby, etc.

I implore you conduct more fact based research on how much revenue would be lost from the travel based industry businesses located off I-81, including hotels, gas stations, restaurants and fast food establishments. The Draft Environmental Impact Statement suggests it would only be 1% decline in business. As a person dealing directly with the guests who choose to stay at our hotel because we're right off I-81, I can assure you it's not merely 1%!

Thank you in advance for your consideration.

Sincerely,

Name Vanessa Alvarez, House Keeper

Dear Mark and Rick:

I am writing to express my concerns with the announcement of the Community Grid as the Department of Transportations preferred option. I am currently employed at the Super 8, which is located directly off I-81 at exit 25.

I am worried that the community grid option will add to my commute time and expenses. I do not live right in Liverpool and use I-81 to get to work daily as do many of my coworkers.

Adding time to my commute will result in less time I am able to spend at home with my family.

Additionally, longer commute times will cost more in gasoline and automobile care as well as childcare expenses.

Please consider the economic impact this will have on my co-workers and me.

Thank you in advance for your consideration.

Sincerely,

Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.

● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal "SEP 14" local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Kirsten Andersen

To: dot.sm.mo.I81Opportunities <dot.sm.mo.I81Opportunities@dot.ny.gov>

ATTENTION: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

Good afternoon,

As a Landscape Architecture undergraduate student at SUNY College of Environmental Science and Forestry, and neighbor and steward to Oakwood Cemetery, I would like to advocate for restoring access to Oakwood Cemetery's main entrance gate, currently severed from the city by Interstate 81. A redesign of I-81 to a slower, lower-volume road, would minimize noise and visual pollution in Oakwood Cemetery generated by the highway. However, the current community-grid design alternative has the potential to increase noise pollution in the cemetery as trucks and cars brake upon approach to the proposed traffic circle. To mitigate this, extending Almond Street's traffic calming beyond where it is currently proposed to either Colvin or Brighton Avenue, would be beneficial and inclusive of Oakwood Cemetery. If a non-community grid alternative is chosen, it is our hope that access and environmental and cultural impacts to this federally and locally protected site be considered and addressed.

Oakwood Cemetery is a major resource; historically, culturally, locality wise, as well as vital public green space. It is used daily by students and faculty from both Syracuse University and SUNY ESF, as well as residents of the east-side adjacent neighborhoods. A connection to the southside and downtown through the historic main entrance gate provides an unmatched opportunity to reconnect the city through a pedestrian safe and serene park-like setting, as it was originally designed and utilized for decades. It is an opportunity to right the environmental injustice that occurred through the original construction of I-81 which devasted and inequitably separated the southside community from the rest of the city.

This connection would also provide new activity leading to renewal and revitalization in the most historic sections of the cemetery which, is in itself a major asset to the city of Syracuse. Currently these sections are out of sight to most, having been left to demolition by neglect, vandalism, and considered dangerous.

It is important to note that Oakwood Cemetery's current administration (non-for profit) does not have an interest in restoring access to Oakwood's historic main entrance gate. However, our ask is that I-81 be designed so that future administrations could if they chose. This is a once in a lifetime opportunity to holistically address circulation, environmental justice, reweaving the urban fabric, and so much more in Historic Syracuse, while celebrating the creativity of the rural cemetery movement of the 19th century.

I urge you to consider righting this wrong and restoring access to Oakwood Cemetery's historic main entrance gate. As it's been said, this is a once in a lifetime opportunity.

Thank you for your time and consideration.

Respectfully,

Vera M. Angelina

To whom it may concern

Comments to proposed 81 plan

1 The report is way too technical for the masses and most won't read it much less understand it.. It should be "dummied down".
2 Wasn't 81 essentially built to accommodate efficient travel from the top of the state to the bottom and beyond? And eliminate urban hold up in traffic?
3 Populations to the West (route 5 and 690) were never included in an efficient access to Rt 81 North nor populations to the North were never included in an efficient access to Rt 690 West. As far as I can tell, the current proposal does not include any improvement to this situation, particularly for those coming from the west. With 81 moved significantly to the east, travel is extended considerably for travelers wishing to utilize 81 N/S.

As a town of salina resident, i believe that the northern suburbs and destiny mall are not being thought when it comes to the economic impact it will have in the area. A suspension bridge is less intrusive than the current bridge and you could still build the area around it. I also support the tunnel. You can not allow just a community grid and hope that emergency vehicles comung from the northern suburbs won't have delayed drive time to hospitals..thank you

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

x o

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.

● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

ATTENTION: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

To Whom it may Concern:

In the 1950's I was a student at SU and remember well the days before I-81 was operational. We had a student flying club based at a tiny grass landing strip near Nedrow, where route 11a diverges from route 11. A drive from my northside Syracuse home to Nedrow Air Park would take me about 45 minutes, and more than one hour if traffic was heavy. Route 11 through the city was an obstacle course of traffic lights and stop signs.

Today I can drive from my Liverpool home to my son's home in the hills SW of Lafayette via I 81 in about 35 minutes- a much longer distance in a lot less time. If I81 were gone, the same trip via I481 makes a 31 mile trip from the usual 23 miles, and ads about 15 minutes time. In the proposed Community Grid BL81 (let's be frank) moves through a part of the city that can be dangerous at times, especially at night, and many drivers will avoid this route in the interest of their own safety. The present I81 carries us over and away from these dangers, and is now a much safer way in terms of both accidents and personal safety to drive through Syracuse than the community grid would be.

I have attended several of the I-81 informational meetings held by the Department Of Transportation locally. In speaking with several of the representatives, it is apparent that the Community Grid option is the preferred choice. Comments and ideas on other alternatives are put down or dismissed. Options other than the grid are overlooked or ignored. I get the distinct impression that the Community Grid has already been selected- it's already “cut and dried.” It seems that the real purpose of these meetings was not so much to present all possibilities to us, but to convince us that tearing down the elevated portion of I-81 through Syracuse is the best option to “make right the wrongs of the past.”

Also, it is mentioned that only about 12-15 percent of daily traffic proceeds through the city via I81, and that most drivers exit 81 in the city. I doubt whether these figures will hold up during morning and afternoon “rush hours” when commuters are driving to work or returning home in the afternoon. Traffic on 81 is quite heavy during these hours, and “dumping” these commuters into the Community Grid would most likely create chaos.

A recent letter to the Syracuse Post-Standard contains numerous good reasons why an elevated I-81 should remain through the city of Syracuse. It even suggested a north-south bridge be built to carry traffic high above the “grid” if the elevated portion of 81 were to be removed. It is very obvious to those of us who live and work here that the Community Grid option would return the city of Syracuse to the “Grid Lock” of the 1950's when North-South traffic along Route 11 through the city moved at a snail's pace?

Sincerely,

Donald W. Argus
4754 Royal Meadow Drive
Liverpool, NY 13088

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.

● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal "SEP 14" local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

John Arnold

Dear Mark and Rick:

I am writing to express my concerns with the announcement of the Community Grid as the Department of Transportations preferred option. I am currently employed at the Super 8, which is located directly off I-81 at exit 25.

I am worried that re-routing I-81 to the current 481 will cause my employer to lose business or close. My schedule and hours are always made based on hotel needs and availability. If the hotel isn't busy enough I could lose hours, ultimately affecting my income.

Everyday our hotel sells anywhere from 5-30 or more additional rooms on the day of arrival. This means guests who did not have a reservation for a particular date, make their reservation on the day they plan to arrive. Some people walk-in to the hotel without a reservation and book a room to stay. Please do not assume that "today's travelers" have planned ahead and know where and when they are staying because of the advancements we've seen in technology. Yes, technology has helped people have unlimited booking options; however, plans change and some people travel alone and cannot safety utilize the technology to make room reservations for themselves while driving. The assumption being made that same day reservations and walk-ins no longer happen in this industry is not based on fact and can have a detrimental effect on my job and income. It is clear and obvious that whomever believes this assumption did not consult with anyone in the hotel industry, especially the hotels located off I-81 in the Town of Salina. Walk-in hotel business and same day reservations (typically made based on location alone) are certainly not a thing of the past and continue to happen daily at hotels all across America. If my hotel were to lose these 5-30 reservations per day because we are no longer located of I-81 it could cost me my job or the jobs of my co-workers. Additionally, it is important to note a large majority of our reservations – in advance or same day of arrival bookings – are made based on our easily accessible location. Most hotels are built next to freeways and Interstate highways for a reason... people want easy access to their travel routes regardless of traveling for business, leisure, passerby, etc.

I implore you conduct more fact based research on how much revenue would be lost from the travel based industry businesses located off I-81, including hotels, gas stations, restaurants and fast food establishments. The Draft Environmental Impact Statement suggests it would only be 1% decline in business. As a person dealing directly with the guests who choose to stay at our hotel because we're right off I-81, I can assure you it's not merely 1%!

Thank you in advance for your consideration.

Sincerely,

Dear Mark and Rick:

I am writing to express my concerns with the announcement of the Community Grid as the Department of Transportations preferred option. I am currently employed at the Super 8, which is located directly off I-81 at exit 25.

I am worried that the community grid option will add to my commute time and expenses. I do not live right in Liverpool and use I-81 to get to work daily as do many of my coworkers.

Adding time to my commute will result in less time I am able to spend at home with my family.

Additionally, longer commute times will cost more in gasoline and automobile care as well as childcare expenses.

Please consider the economic impact this will have on my co-workers and me.

Thank you in advance for your consideration.

To: dot.sm.mo.I81Opportunities <dot.sm.mo.I81Opportunities@dot.ny.gov>

ATTENTION: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

To the NYSDOT:

I'm a longtime resident of the Town of DeWitt, NY, and I'm a strong supporter of the DOT's community grid option for the reconstruction of Interstate 81 in Syracuse. I believe that the community grid is an important step in the campaign for greater racial, economic, and environmental justice in Central New York. However, I also believe that several upgrades can be made to the plan that appears in the DOT's July 2021 DDR/DEIS.

My primary concerns involve the stretch of highway to be relabeled BL 81 between the current Interchange 16A and I-690. Specifically, the DOT's current plan fails to meet its own stated goal to "enhance the livability, visual quality, sustainability, and economic vitality of greater Syracuse."

It's well-documented that the original construction of I-81 in the 1960s came at tremendous cost to residents of the community in the highway's path, a majority of whom were persons of color. Any actions seeking to improve the area's "livability" and "economic vitality" in the 2020s must be based on deliberate and direct attempts to undo these past wrongs.

The DOT's current plan would designate BL 81 as a Qualifying Highway, with this stretch consisting of an elevated viaduct between Interchange 16A and Martin Luther King, Jr. East, and a grade-level boulevard between MLK, Jr. East and I-690. I don't see how the particulars of either of these sections serve the best interests of the community as a whole, for several reasons:

1) The plan continues to limit access between BL-81 and most of Syracuse's South Side, reducing chances for economic growth in neighborhoods that are in need of locally controlled, sustainable development;

2) The plan also continues to cut the South Side off from its historical connection to the cultural resources and green spaces of Oakwood Cemetery;

3) The building of a roundabout in the immediate vicinity of Dr. King Elementary School endangers the health and safety of large numbers of students, staff, and residents;

4) As part of a Qualifying Highway, the planned grade-level boulevard will feature wider lanes and faster speed limits than needed on a city street -- and therefore reduce safety for drivers, cyclists, and pedestrians;

5) The Qualifying Highway status will encourage unnecessary traffic by commercial trucks and other large vehicles, which will limit attempted reductions in both airborne and noise pollution;

6) Both the length of the retained viaduct and the width of the boulevard reduce the amount of surplus land that will become available for new use after the reconstruction.

I believe that all of these concerns could be addressed by lowering the new BL 81 to grade significantly further to the south, perhaps at East Brighton Avenue. I've yet to hear any reasons why this wouldn't be feasible from an engineering standpoint.

Again, I want to emphasize that the reconstruction of I-81 can only be done properly with an understanding of the need for social and environmental justice in Central New York. While such a perspective is beyond the purview of the NYSDOT, working with local political leaders and representatives of the directly impacted community who seek such goals is not.

As I briefly referenced above, one chance to practically implement this vision will be the formation of the "land use working group" that the DOT has promised. I strongly encourage that this group include a large number of residents from the neighborhoods directly impacted by the highway's reconstruction. The DOT should further commit to returning as much of the freed-up land as possible to community control, likely in the form of a land trust.

Furthermore, a significant proportion of the employment opportunities created by the reconstruction should be made available to businesses that represent the impacted community. There are plenty of disadvantaged

business enterprises in Central New York that have the training, certification, and capacity to be part of the I-81 workforce. This includes not only firms in construction, but also those providing support services.

It's also essential that the health concerns of individuals who'll be living, working, and learning in the immediate vicinity of the construction for several years be addressed. Numerous reports have detailed the long-term hazards of exposure to toxins produced by highways and highway construction. The claims by the DOT that no one will require relocation seem naïve and potentially irresponsible.

I appreciate the DOT's willingness to engage the public over the many years in which the I-81 reconstruction project has evolved. Many people have shown a sincere commitment toward an improved vision of the project, and better ways to achieve that vision. As the project approaches its final stage of planning and turns toward implementation, I hope there is continued room for improvement.

Thank you,

Kevin Atwater

● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also

provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Lauren Austin

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. ● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

I personally support the grid only if they add the Harriet Tubman bridge. Traffic has to move, not be slowed down. Let's face it, I don't want to be stopped at every traffic light, especially at night time, in the dark. The grid only will add to pollution.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Bernice Baeumler

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.

● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Paul Banks

Hannah Brazil

Subject: Tear Down the Structural Racism of I-81

Dear

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.

● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.

● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Ann Barnett

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.

● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

Thanks for allowing for our thoughts on this project. I'll keep my comments simple. I live in Clay, NY , near Cicero. I use interstates 81, 481, 690 & 90 nearly everyday. While I'm not a fan of the community grid, I am accepting of it as long as the current elevated highway is replaced in some fashion. A more elevated highway or suspension bridge, as proposed by some, are a couple of ideas that must be considered. While the grid is considered by some to be an important service to the city of Syracuse, not replacing the current elevated portion of rte 81 would be a great disservice to many local towns & villages as well as the city. The intersection of interstates 81 & 90 must be retained from all directions, but, especially from rte 81 northbound from south of town for those who need to go west. I realize they can make that connection from current interstate 481, but, that's counter productive as it takes them away from the direction they want to eventually go.
Those are my thoughts & ideas. I hope they help you make intelligent & productive choices. Again, thanks for allowing us to provide our feedback and ideas.

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal "SEP 14" local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Rachel Bass

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.

● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal "SEP 14" local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. ● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal "SEP 14" local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Linda Beardi

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. ● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Subject: Tear Down the Structural Racism of I-81

Dear

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.

ATTENTION: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

As a longtime resident of Syracuse, I feel obligated to beg the City, State, and Federal governments not to detour I 81 around the city. Using the false analysis of the problem as dividing the east from the west sides of town amazed me. One can drive under the viaduct at every existing street!
The best solution I've heard is the sky bridge, creating a beautiful floating form which echoes the hills on either side of the city. It would also save homes and businesses both within the city as well as the surrounding suburbs. Consider also the amount of time it took to do the small reconstruction At the Teal Ave. exist of 690, and the fact that people can enter and exit the Post Office from only the lane Heading north. Users have to either head onto the 690 entrance heading South and exit a mile or so away at Midler, or turn south on Burnett and find a place to turn around and find a way to turn southbound on Teal.
Please, I beg you, do not make this decision based on mistaken ideas of social justice for a mistake made 70 years ago. The descendants of those harmed then will not be helped and current residents will not benefit by possible street level traffic dangers.

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.

● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal "SEP 14" local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Lauren Bell

Subject: Tear Down the Structural Racism of I-81

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

To: dot.sm.mo.I81Opportunities <dot.sm.mo.I81Opportunities@dot.ny.gov>

ATTENTION: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

I live on the North Side of Syracuse (near Butternut St./Grant Blvd. After attending many public meetings, looking at maps, asking questions, I still have no adequate answers. I live 10-15 minutes from any entrance/exit to I-81 or I-690. I believe the North Side of the City will receive an enormous amount of neighborhood traffic – and many people have told me that's exactly what they would do. Neighborhood streets aren't built for heavy traffic and many children live in these neighborhoods. Several elected officials have also told me that is what they would do coming into the City.

I use the Butternut St. Bridge a lot to get to the West and South sides, especially Community Hospital and other parts of Onondaga Hill. When I explained to several different DOT engineers how I drive to these places, I was told that it's not used much and would be eliminated. I'm not sure when this survey was done, but there is always 4 lanes of vehicle traffic and pedestrian traffic using this. I am told the alternate would be a 2 lane Butternut St. Bridge at Ganet Ave but it won't really be connected to anything that could get me to the places I need to go to. I was told if I needed to get to West St., I could go to W. Genesee St. which would connect with West St. That's a very convoluted route for me to get to West Genesee (and takes much longer) and still would not get me where I want to go. Or I could drive right down Salina St. to Seneca Turnpike for Community (which is where I have Oncology) and Onondaga Hill. I would say with all the traffic lights reportedly going in it would probably take me 45-60 minutes vs. the 10-15 it now takes.

My next question is how would I access I-81 South. I normally drive 12 minutes to get on 690 at Teall Ave. and then get on I-81 South. I was told I could just take 481. That would require me getting on I-81 North to 481. To get to the same point on I-81 South that I could gain from my original route would take at least an additional 20-30 minutes, maybe more.

I understand there will no longer be entrance/exits from I-81 to 690. For us on the North and East sides of the City that presents a real problem. I do believe the trucking companies when they say that truck traffic going around on the revised 481 will be substantial. All of this means I will be driving City streets more to get to places. And no one has said what happens to the elevated parts of 690. I believe that with no entrance/exit between I-81 and 690, this will negatively effect those living on the North side and will take us twice as long to get anywhere and at my age, that isn't something I want to have to do. I have lived on the North side all of my life so I know all the 'quick' ways to get places in the City. But this I-81 idea will make things very much harder…..

I just don’t think the Community Grid, as proposed is the answer.

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.

● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal "SEP 14" local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Joanna Berg

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.

● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal "SEP 14" local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Judy Bernstein

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. ATTENTION: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

I support the Community Grid option and the removal of the elevated portion of Route 81 through downtown Syracuse.

As a automobile driver from the western suburbs, I am concerned about congestion in the design of the 690 E exit to W. Genesee St. and West St. That entire interchange is likely to be backed up during rush hours.

Also, the current road has a difficult weave with people entering 690 EB at Geddes St. and crossing with those exiting for W. Genesee & West St. How will that be mitigated in the new design?

During the long construction period, can there be an app or website or interface with navigation apps (or all three) that help people find alternate routes?

There should be an easy-to-use website that keeps the public informed of the construction plans and road closures, etc. during construction.

I submitted this idea before, but could there be some mechanism to incent northbound large truck drivers heading west to stay on I-81 until they get to the Thruway at Exit 34A and then head west? One idea is to have a reverse toll accruing to the individual truck driver as well as the truck owner, so that it rewards desired behavior rather than punish undesired behavior. The drivers and truck owners could be asked what would work for them.

Can the electronic signs along the highways occasionally display encouraging messages about the project progress? Something with humor.

Thanks for all your hard work on these plans and preparations. I look forward (and hope I'm still alive and driving) to the completion of this project!

Albany, NY 12207

Dear Mark and Rick:

I am writing to express my concerns with the announcement of the Community Grid as the Department of Transportations preferred option. I am currently employed at the Super 8, which is located directly off I-81 at exit 25.

I am worried that re-routing I-81 to the current 481 will cause my employer to lose business or close. My schedule and hours are always made based on hotel needs and availability. If the hotel isn't busy enough I could lose hours, ultimately affecting my income.

Everyday our hotel sells anywhere from 5-30 or more additional rooms on the day of arrival. This means guests who did not have a reservation for a particular date, make their reservation on the day they plan to arrive. Some people walk-in to the hotel without a reservation and book a room to stay. Please do not assume that "today's travelers" have planned ahead and know where and when they are staying because of the advancements we've seen in technology. Yes, technology has helped people have unlimited booking options; however, plans change and some people travel alone and cannot safety utilize the technology to make room reservations for themselves while driving. The assumption being made that same day reservations and walk-ins no longer happen in this industry is not based on fact and can have a detrimental effect on my job and income. It is clear and obvious that whomever believes this assumption did not consult with anyone in the hotel industry, especially the hotels located off I-81 in the Town of Salina. Walk-in hotel business and same day reservations (typically made based on location alone) are certainly not a thing of the past and continue to happen daily at hotels all across America. If my hotel were to lose these 5-30 reservations per day because we are no longer located of I-81 it could cost me my job or the jobs of my co-workers. Additionally, it is important to note a large majority of our reservations – in advance or same day of arrival bookings – are made based on our easily accessible location. Most hotels are built next to freeways and Interstate highways for a reason... people want easy access to their travel routes regardless of traveling for business, leisure, passerby, etc.

I implore you conduct more fact based research on how much revenue would be lost from the travel based industry businesses located off I-81, including hotels, gas stations, restaurants and fast food establishments. The Draft Environmental Impact Statement suggests it would only be 1% decline in business. As a person dealing directly with the guests who choose to stay at our hotel because we're right off I-81, I can assure you it's not merely 1%!

Thank you in advance for your consideration.

Sincerely,

Dear Mark and Rick:

I am writing to express my concerns with the announcement of the Community Grid as the Department of Transportations preferred option. I am currently employed at the Super 8, which is located directly off I-81 at exit 25.

I am worried that the community grid option will add to my commute time and expenses. I do not live right in Liverpool and use I-81 to get to work daily as do many of my coworkers.

Adding time to my commute will result in less time I am able to spend at home with my family.

Additionally, longer commute times will cost more in gasoline and automobile care as well as childcare expenses.

Please consider the economic impact this will have on my co-workers and me.

Thank you in advance for your consideration.

Sincerely,

SB

ATTENTION: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.

● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal "SEP 14" local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Eric Blasenheim

ATTENTION: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also

provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Russell Blount

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.

● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal "SEP 14" local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Dear Officials—
Please just GET IT DONE. Although I live just outside the city, in the town of DeWitt, I completely support the community grid. It's long overdue, and the alternatives have been studied to death. I am SO TIRED of the delays and of suburban business owners and Destiny trying to wield inordinate influence over what should be a call made by those most directly affected--city residents themselves—and not by commuters and business entities more interested in moving car traffic through the city than spending time in it.

I have lived in Syracuse since 1980 and have seen how small-minded, provincial thinking has held us back time and again in ways that have stymied our growth and helped depress downtown economic activity. We could have had a downtown baseball stadium, but no—the northside power brokers nixed that in favor of keeping it in their own outer neighborhood. I remember the hue and cry that attended Syracuse University's initiative to create a "Connective Corridor," linking the campus with downtown and west to Armory Square. God forbid we make University Avenue TWO WAYS. It'll be a disaster. The corridor will be a joke. All for naught. University Avenue functions just fine as a two-way street, and the corridor provides a nice bike path from the hill downtown. I don't know what it is about change, but we don't handle it very well up here.

Build the community grid. Reroute thru traffic to 481. Get it done already. Enough's enough.
Best,
Carol Boll

I-81 Viaduct Project

Margaret Bombard <bombs4822@gmail.com>

Sun 9/5/2021 2:27 PM

To: dot.sm.mo.I81Opportunities <dot.sm.mo.I81Opportunities@dot.ny.gov>

ATTENTION: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

My name is Margaret Bombard. I am a long time resident of the Syracuse area. I grew up in the suburbs, then moved into the city and have worked at our downtown hospitals for the last 22 years. During that time I have found the level of income inequality between white county residents and inner city minorities in our city to be quite shocking, and am writing to demand that the $2 billion I-81 project be used to help remedy, rather than exacerbate, this situation.

Having friends in the trade unions, I have always been aware that city residents, who represent the greatest concentration of our minorities, are very underrepresented. However, the Urban Jobs Task Force/ Legal Services of CNY 2019 report (https:/www.ujtf.org/reis) reveals that the problem is bigger than many of us imagined. Therefore, I am in strong favor of using PLAa with Community Workforce Provisions. This should also be coupled with a commitment to use apprentices as a greater percentage of the workforce, as I understand many other cities do for their projects. A goal of 20%, apprentice use, while keeping the journeyperson to apprentice ratio intact, does not seem unreasonable. I understand the reinstatement of the SEP-14 program will make CWA-PLAs much easier to construct, and so I expect this apprenticeship provision to be made an important goal.

While there are many other ways the 81 project planning can impact our community, I see finally including diverse, disadvantaged city residents in the trades as a way to effect a change in the income disparities that will last long after the I-81 project is over. The work needed to affect this change is something we owe the many inner city residents that were displaced and marginalized by the original poor design of this highway project, and I urge the NYSDOT to fully support these important measures as a partial remedy.

Margaret Bombard

I81 Project

Margaret Bombard <bombs4822@gmail.com>

Mon 9/13/2021 5:56 PM

To: dot.sm.mo.I81Opportunities <dot.sm.mo.I81Opportunities@dot.ny.gov>

ATTENTION: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

My name is Margaret Bombard. I am a long time resident of the Syracuse area. I grew up in the suburbs, then moved into the city and have worked at both Upstate and Crouse for the pediatric cardiology department for the last 22 years. This has allowed me a first hand look at the health disparities between our inner city, mostly minority refugee children and their white, suburban counterparts.
I am quite sure, as many studies have shown, that a good part of the disadvantage that our city children experience stems from community environmental conditions, such as lead in their soil and exhaust fumes and sediment in their air.

Therefore I am writing to urge the DOT to put the environmental impact that the $2 billion I-81 project will have on these children front and center. This project should be used to help remedy this long standing pollution situation.

Mitigation of harm from the lead that will most definitely be released from the shifting of huge amounts of soil during the preparation and demolition of an area that sits close to children's homes must be taken seriously. And the proposal for a pollution generating round about next to an elementary school is unacceptable to anyone who has an understanding of public health. The asthma rates related to the existing poorly planned viaduct are shocking and should be used to guide better decisions making as this project is finalized.

I would hope that the health of these vulnerable children, the future of the city we claim to be improving, will not be just a side note but the focus of intense study as this project moves forward.

Margaret Bombard

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Deborah Boomhower

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

My name is Andy Boucounis and I own and operate Andy’s at the corner of 101 west court st and genant drive in Syracuse. We have 4 driveways 2 for retail and 2 for wholesale and receiving. One of the driveways on genant is how tractor trailers back in to get unloaded and are paramount to our operational survival! There’s also a utility pole there that makes it tough for them to back in as it’s been struck and replaced many times over 27 years we’ve been here. I would appreciate someone coming to walk the property with me soon to explain in detail what needs to be addressed. I can be reached at +13154470612. Thanks

The Community Grid = Gridlock for the Community

Kathleen Boudreau <kboudreau116@outlook.com>

Wed 10/13/2021 6:33 PM

To: dot.sm.mo.I81Opportunities <dot.sm.mo.I81Opportunities@dot.ny.gov>

ATTENTION: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

Please do not move forward with the Community Grid.

1. It will slow, may even prevent getting to the area hospitals in a timely manner. Can the politicians in favor of the grid live with that? News reporters are waiting to report ALL the deaths due to not being able to access the hospitals in a timely manner due to grid lock from The Grid! The legacy of the politicians that are in favor will be tarnished with every death.
2. It will increase traffic on local streets when traffic is slow moving during peek times (hospital rush hour, normal rush hour, Syracuse games, Dome events) and traffic must find alternative local routes to keep moving.
3. The reduced lanes on Erie Blvd was ill timed with more traffic anticipated during the 81 construction and after The Grid is completed. Who's idea was it to minimize local street passage ways before a major roadway construction project on 81? This will add to the tarnished legacies. Plus, I have never seen a bicycle use the pathway, but I see lots of people walking in the street, especially during the winter with snow preventing passage out of the street. Sidewalks the entire length of Erie Blvd were and are more critical and needed than a bike trail.
4. The 2-lanes of Rt 481 simply won't be able to handle an increase of traffic when it is currently heavily used during peek times. Increase 481 with a 3rd lane first, before anything else.
5. Aren't we suppose to be concerned with car emissions and global warming instead of increasing mileage to get to the airport by anyone south of the city. It clearly doesn't make sense to go to the 81 exit off 481 and head south to reach the airport. Adding to increase fuel consumption and emissions.
6. The truck stops at 7-North Street are the first for truckers from the Canadian border to the north and Binghamton to the south. What and where are they to go to fuel up if they must bypass on Rt 481? Since there isn't anything that can accommodate them easily, they will clog up The Grid so they can still fuel up at an exit they can access easily.
7. Areas outside the City of Syracuse that come in for events at the Civic Center, Syracuse Stage, Landmark, will be less likely to attend without the efficient way they currently enjoy of getting out of the city on 81, and perhaps 690 (east or west) to head home. The city venues will be hurt by reduced traffic from the suburbs.
8. When someone uses the argument, "Rochester removed their interstate for a grid" proves they never lived in Rochester. Rochester did NOT remove the fast moving interstate along the city. They removed what was called the "Inner Loop" and a road with such a tight radius that it was dangerous and difficult to navigate. Look at all the cities that realize to keep their inner city thriving they must maintain the interstate to provide quick access to the city. Seattle is on good example, and their viaduct is larger, higher, and necessary.
9. Consider the Harriet Tubman bridge instead. It would put Syracuse on the map! It would make Syracuse memorable, rather than stuck in gridlock while trying to pass through.

It a mistake to correct a wrong from years ago, and it will only make the City of Syracuse a gridlock mess.

I81 Syracuse

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.

● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

John Bowers

To our decision makers:

Please just build a better bridge. This is an opportunity to rebuild the bridge correctly, with all the new technology and engineering opportunities to correct what is there now. There could be better off ramps directly to the hospitals for emergency care and ambulance patients. On ramps could totally be reengineered to better suit the traffic leaving and entering the downtown business district. You can still have a park, bike trail ect under a newly developed bridge. What's going to happen to all the existing business's along 81 north of the city. Put the money that's going to go into 481 into other infrastructure back into 81. Nobody has to tell you 481 is a bypass not an interstate. Use some common sense and keep it that way.

Thank You
William Bowhall

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

Interstate 81 Community Grid Plan - western impact

Mary Bradly <mbradly@verizon.net>

Sun 9/12/2021 11:00 PM

To: dot.sm.mo.I81Opportunities <dot.sm.mo.I81Opportunities@dot.ny.gov>

ATTENTION: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

To Whom It May Concern:

If the Community Grid is adopted, **it is imperative that the NYSDOT uses its authority to adopt regulations or a concrete incentive plan to keep long-haul freight and garbage trucks on the Interstate!** Even with the current I-81 route travelling straight north through Syracuse, hundreds of these oversized trucks daily take short cuts through dozens of Finger Lakes communities to the west of I-81. These trucks are not going to swing east, then back west to go to destinations on the west side of the Interstate. The Finger Lakes towns and villages are not designed or equipped to handle the current truck traffic, let alone the increased volume of truck traffic that the proposed design and construction of the community grid will create. Auburn, Skaneateles, Aurora, Ithaca, etc. are already overwhelmed by the truck traffic.

The trucks also endanger the Skaneateles Lake water. This is a concern for the local Skaneateles residents AND those of Syracuse, 200,000 of whom depend on the lake as the primary drinking water source. We take the stewardship of our lake very seriously and the truck traffic on Routes 41 and 41A poses a constant potential threat of spills that would compromise the quality of our lake water.

In addition to the obvious pollution from these trucks, the noise adversely affects the quality of life for those of us who live and work along these rural routes. The trucks thunder up and down Route 41 at all hours, generally travelling at speeds in excess of the posted limits. Route 41 is a hilly and winding road with very narrow verges along the edges - it's not designed for trucks that should be travelling along the Interstate.

You have a responsibility to incorporate the needs and concerns of communities to the west of I-81 into the plan. The NYSDOT seems very concerned about and solicitous of eastern neighborhoods and communities (most of the meetings have been focused there), but the negative impact is likely to be greater to the west.

Sincerely,
Mary Bradly

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Pamela Brandt

Subject: Tear Down the Structural Racism of I-81

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.

To whom it may concern,

I think it's unfair that the Town of Salina was not included in the 81 upgrade. The Northern intersection is so very horrible. So many people have tried to hit us. No one looks or pays attention while there. Nor do they drive safely. Something needs to be done there before more accidents or even death occur. I always dread going to the mall since that is the way we have to go to get there. A day before my 18th birthday someone almost hit us + we would have went over the side rails. I saw my life flash before me. Please do something to help the area become a safer enviroment. I want my daughter to be excited that we are going to the mall or ~~ext~~ other events in Syracuse not scared that someone is going to hit us. Thank you for listening. My name is Ashley Bethel. I am

I was so scared.

a Assistant manager for Bruegers Bagels. I have worked there 1 1/2 years now. I have been a Salina Resident for 33 years now. I moved here when I was 1. I have a 12 yea old daughter. Hope you will take my comments into consideration. Thank you for your time.

Sincerely,

Ashley Bethel

I can not find any info on this area. It pass through my neighborhood. Now with a 4 lane highway with the noise wall falling down in places. Very un kept, with noise not being muffled as it should. Proposal making it 8 lanes. Will there be a larger wall that stays erect, placed in that area. Could not find any renderings in the report.

Subject: Tear Down the Structural Racism of I-81

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Gabrielle Broder

To: dot.sm.mo.I81Opportunities <dot.sm.mo.I81Opportunities@dot.ny.gov>

ATTENTION: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

Mr. Frechette,

A letter providing comments regarding I-81 is attached. I have also copied the text of the letter below for your convenience:

Ashley McGraw Architects, DPC, is writing to express support for the Community Grid option to replace the I-81 viaducts in downtown Syracuse. As a longtime member of the downtown Syracuse business community, we have seen the value that a resurging downtown brings to Central New York. The Community Grid is the necessary next step to support that continued growth, whereas reinstating an interstate highway through downtown would steer our city in the wrong direction.

As employers in downtown Syracuse with a staff of approximately 40 people, we rely on the vibrancy of downtown Syracuse to attract and retain talent. We are a specialized business which must often recruit and relocate talented employees from other regions, and we know that the Community Grid's positive impact on the City of Syracuse will continue to improve our success at retaining valuable talent here in Central New York. For that reason, the Community Grid is a critical component to the continued growth and long-term success of our business. It's no coincidence that Ashley McGraw's team is almost entirely composed of people who value a healthy urban environment and prioritize that quality when they choose a place to live.

We have been reviewing the most recent round of project documents, specifically through a lens stemming from our professional capacity as architects and our geographic presence downtown. We are excited by the design improvements that have been made up to this point, and we strongly encourage the NYS DOT to continue to refine the I-81 Project in ways that will make the new Community Grid an even greater asset. We offer these suggestions:

A narrower Almond Street right-of-way
To the greatest extent possible, the project team should work to narrow the Almond Street right-of-way to achieve a more human-scaled, urban street. The currently planned 197 foot wide right-of-way undermines its potential as comfortable and valued urban space, and we are confident based on other cities' experience that the project goals can be met with a right-of-way that is closer to 120 feet wide. This narrower, "right-sized" street will ensure it does not feel like an inhospitable environment for those outside of vehicles, and therefore does not reinstate a perceived barrier between neighborhoods.

Return underutilized land to the community
Returning land to the community for new development is a critical factor in the success of downtown. We cannot replace an elevated barrier with a new, inactive space that is uninviting to pedestrians. Rather than the vast open spaces that NYS DOT shows occupying the former highway footprints on the east, north, and west edges of downtown, we ask that the land be returned to the city or county so that they can facilitate new development. A narrower Almond Street right-of-way establishes an even greater area of developable land. This will both increase tax base and enable future vitality within our city. Providing an opportunity for buildings along these corridors to create new "street walls" will be a key factor in the success of the project and strengthening the adjacent neighborhoods.

Although our primary stake in the project revolves around the downtown location of our business, we are encouraged by the efforts and direction of the project as a whole to begin to heal some of our community's physical, economic, and social scars through this incredible opportunity.

Thank you for the hard work your team has done. We once again express our firm support for the Community Grid, and look forward to the continued design improvements your team is working on as the project progresses.

● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Olivia Brooks

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that still persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. However, the plan ignores the history and the current needs of the environmental justice community that lives adjacent to the viaduct that will be demolished.

It doesn't have to be this way. The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should reflect the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use
● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Conduct a new analysis of land use that adequately considers the trends of the environmental justice community that lives adjacent to the raised viaduct.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth
● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction.
● Create a Community Restoration Fund.

● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity
● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent to Black and Brown Syracuse residents.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children
● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, defined as one used by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Megan Brophy

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.

● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal "SEP 14" local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

Dear Mr. Frechette, Project Director

I am taking a minute to send you my thoughts regarding the Community Grid Plan. As I viewed it, it did not looked like there is curbing with two lanes on both sides separated by a median with grass and bicycle paths. I did not see any "shoulders" on either side where cars could pull over in the event of a breakdown, or accident. With a great deal of traffic using this boulevard, it is inevitable that there will be accidents and car breakdowns. If there is nowhere for these cars to pull over, it will cause a severe gridlock. If both lanes are blocked, transportation will stop completely and how will Police and tow trucks get to the problem site to clear it? If it "only" blocks one lane, it will still cause a dangerous problem of commuters trying to merge into one lane of traffic.

Another related issue is plowing the road in Winter. As you know, we get regular snow and several heavy snowstorms during winter. There has to be somewhere for the snow banks or else the road will be reduced to one lane due to plowed snow on both sides of the road! This will cause traffic jams and more accidents.

In summary, please widen the road and have an extra lane for emergency vehicles as well as other regular issues mentioned above.

Sincerely,
John P. Brown

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also

provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.

● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

William Brown

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600-1000 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.

● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600-1000 feet from STEAM at Dr. King Elementary School. Essentially, make the "round-about" that was proposed "near" Dr. King Elementary School further to the South so that it does NOT have that significant amount of traffic and terminus near the Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Subject: Comments on I81 Project

ATTENTION: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

As a lifelong resident of Central New York, I can say with absolute certainty that I81 is the most important infrastructure in the region. It is more important than the airport, railways, buses, public buildings, other roads, and highways because it is the artery through which virtually all commerce and human activity flows. I690 and I481 are branches that extend from the trunk that is I81. Downtown Syracuse is fed by I81 and to cut it off is unconscionable and would do irreputable harm to the city and the region. We live in LaFayette and I have not only commuted daily into downtown via I81 for work at Niagara Mohawk, Pyramid's Clinton Exchange, and Franklin Square for over 30 years, but my wife and I use I81 for almost every excursion. If we are headed to a Pop Warner game in Camillus, we take I81 to I690W, the fairgrounds, I81 to I690W, a Syracuse game its I81 to Adams Street, any business in Dewitt its I81 to I690E, Destiny USA, I81 to Park Street, Onondaga Lake Park, I81 to 370, the airport, I81 to Mattydale, Burdick in Cicero, I81 to I481. Whether its shopping, recreation, dining, visiting family or doctors' appointments, I81 facilitates the trip. Cutting off the flow of thousands of vehicles into Syracuse and throughout the region is illogical to say the least.

Forcing traffic onto city streets, lined with homes, small businesses and schools not only slows commutes but destroys neighborhoods and creates unnecessary safety issues for residents. It is not just stop and go traffic congestion, angry drivers attempting to take a left from a residential side street, but the constant noise that will disturb the peace and quiet that every resident is entitled to. Also, air pollution and roadside trash. Property values along the proposed route are already low, what will they be worth when thousands of vehicles rumble by all day, every day? Next to nothing!

Routing traffic around the city on what is now I481 is incredibly inefficient. The shortest distance between two points is a straight line, not a wide loop. Would we continue to frequent businesses downtown, in the city north of downtown, in Liverpool, Clay, North Syracuse, and Erie Blvd East from downtown to Thompson Road if it required looping around the city then doubling back via I690W, or connecting with I81 at I481 in Cicero and doubling back south? Not likely! Syracuse is referred to as the 20-minute city, but more appropriately the 20-minute designation should be applied to Onondaga County, not just the city. The speed of travel and the ease of commutes is a huge, positive feature of this area. Instead of sitting in traffic, which is unproductive and diminishes lifestyle, we in Central New York enjoy a more relaxed and productive lifestyle than just about any other metropolitan region in the country. Why eliminate this benefit?

Why is the question, who is it that wants to tear down I81? No one I have ever talked to. I have a good friend that lives along the proposed Community Grid on the southside. She has no interest in visiting anyone on the other side of I81, and even if she did, she would just drive a couple of blocks. She also does not want more traffic on State or Salina Streets; nobody she knows is in favor of this project. I cannot imagine anyone who lives outside the city limits favoring the demolition of I81. Of the approximately 500,000 people who live in the county, how many want I81 gone? I assume it is next to none! That is not to mention the people that live in Oswego and Cortland counties that

consider Syracuse as their hub.

In reviewing the impressive, glossy brochure I received from the DOT titled Major Features of the Community Grid Alternative it is clear that somebody in state government is pushing this approach. I wonder if they live in Central New York. But in any case, the first comment I have is that the other alternatives are not included, which would lead one to believe that this is a fait accompli, which I hope is a misconception, why else have all these presentations, meetings, and drawn-out comment periods. Second, the renderings are a fantasy, pristine streets, beautiful landscaping, pedestrians strolling leisurely along the boulevard and bicyclists. This is the City of Syracuse, replete with cold and snow. Compare the drawings to the reality that is North Salina Street or Erie Boulevard East. Third, the proposed features for the most part include things that appear to not require the removal of I81. For example, adding a basketball court to Wilson Park, improving West Street, North Clinton Street, Hiawatha Boulevard, and the Onondaga Creek Walk, plus establishing the "Canal District". These projects have nothing to do with I81 other than funding and an attempt to placate negatively impacted residents. If these improvements are indeed worthwhile, they should be undertaken and independently funded. The emphasis on bicycle paths is ridiculous, biking around the lake or along the canal is great, we do both, but no one uses the "Connective Corridor" or the new path down the middle of Erie Blvd East. Improving the view of the Tully Valley; that tops all. This is not the best use of taxpayer money!

Finally, this whole alternative and the justification for tearing down I81 is to "reconnect communities and neighborhoods". In looking at the map, I see very little in the way of neighborhoods to reconnect. I see homes on one side of I81 and a cemetery, student housing, parking lots, medical buildings, etc. on the other side. Along the southside you would have to cross the busy new boulevard, walk up a very steep hill and cross a railroad track to visit a non-existent neighborhood. I will acknowledge that Pioneer Homes is bisected by I81, but demolishing I81 cannot be justified on that basis, there has to be more reasonable alternatives. As far as University Hill, if students want to frequent downtown, which does not appear to be the case, they certainly will not trek down and back up Adams Street and walk all the way over to Salina and Armory Square. If anything, a shuttle service would make more sense. In either case the viaduct is not an impediment, in fact crossing a busy boulevard would be most inconvenient.

I81 through downtown was undertaken simultaneously with urban renewal which resulted in many homes being demolished and people displaced. Those homes have been replaced by not only I81, but also dozens of buildings, including many government and medical buildings. Removing the viaduct will not result in new homes being built in that footprint and it will not remedy the alleged injustices suffered by the displaced residents. Urban renewal took place in the 1950s and 1960s, nothing we do today will benefit those living in the 15th Ward 60 or 70 years ago.

The bottom line is that I strongly oppose the elimination of the I81 corridor through Syracuse for the numerous reasons cited above. The rational and depictions used to justify tearing down the highway are bogus. I do think that the "Onondaga Interchange" needs to be dramatically reengineered and if a new viaduct is necessary, and I assume it is, I suggest that changes to the connections between I690 and I81, as well as the proximate ramps be made. The appearance of the existing old, deteriorated viaduct is certainly an eyesore, but in the reengineering process that can be remedied. There are many examples of attractive structures that designers can emulate. As far as a tunnel system, that would be far too costly and disruptive, and should not even be considered. There is only one justifiable alternative and that is to reengineer and rebuild along the existing viaduct footprint in accordance with current safety standards.

Dear

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

mary buchwald

481 Issues

Jeff Buckley <jbuckley@jbuckleygroup.com>

ATTENTION: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

Other than I think the project is a mistake and will not provide the desired benefits to the people who live in the affected area of Syracuse while increasing the commute times for all in the community; I have two main issues:

1. Add 3 lanes to the **entire** stretch of 481 between where it currently connects south and north of the city. This road currently is congested for most of the day, once you add the additional traffic this plan will cause, it will be a mess.

2. How does one think that forcing drivers exiting from 481S at Dewitt to wait at an added light and cross Genesee Street to head east is going to help traffic flow on either 481 or Genesee? The current off ramp for cars heading east on Genesee should not be eliminated but rather an extra lane needs to be added to both the bridge and the current off ramp to allow for the increased traffic flow and prevent congestion on 481S.. Look at what currently exists on the other side of the bridge for traffic heading east on Genesee, getting onto 481N, it has two lanes, and they are busy most of the day. That needs to be provided on the other side of the bridge for traffic heading east towards Fayetteville.

Thank you for your consideration.

Best Regards,

Jeff

My Support for Community Grid Alternative in Syracuse

Mary Buckley <midlifemama@msn.com>

Tue 9/14/2021 4:47 PM

To: dot.sm.mo.I81Opportunities <dot.sm.mo.I81Opportunities@dot.ny.gov>

ATTENTION: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

I support the Community Grid Alternative as the replacement for the I-81 viaduct in Syracuse. I believe that the Community Grid Alternative will provide the most benefits to the city and the areas around it. The opening of land in the city's center to connect the city's now-separated sections and the provision of more sidewalks and walking and biking paths will enhance the city's quality of life and offer more needed opportunities for walking and biking. With I-481 as the new I-81, traffic through the region will avoid the city's center.

Many thanks to the New York State Department of Transportation and the Federal Highway Administration for all their hard work on this major project.

Mary F. Buckley
Resident, Town of Clay

I-81 Public Comment

Public Comment on Community Grid Option – I-81

Resident: Andrea Buckvold
Contact Info: andreabuckvold@gmail.com
108 Victoria Place
Syracuse, NY 13210

I am writing this comment as a Syracuse resident of the Westcott neighborhood for the past 14 years and as a teacher at STEAM at Dr. King Elementary.

I am in favor of the Community Grid option for the removal/replacement of I-81. Syracuse City has long needed to address the issue of how the highways have divided the community and the racial legacy of segregation. Syracuse is not unique in having to own up to this dark history of city planning, but it does have a unique opportunity to offer reparations to the community that still resides in the shadow of I-81.

The current Community Grid option does not fulfill this duty. The current plan as I understand it, allows high speed traffic to continue into the downtown area of the city until the round-about placed at STEAM at Dr. King. While I understand the purpose of a Business I-81 is to allow highway traffic to enter the downtown efficiently, this proposal effectively continues the segregation and isolation of the South Side community from the rest of the city.

The current position of the round-about is for practical purposes at the northern most residential area, which would mean that south of that round-about traffic would be continuing at high speeds and not allow pedestrian or bicycle crossings. Because of that decision, further development of the land bordering that section, or home improvement incentives, would also not be possible or likely. This would essentially create a no-go zone that would hold the current segregation line. I ask the planners to take another look at this section of the proposal, which seems to not been as considered as needed. Without this section being passable or connected to the rest of the city, this isn't a Community Grid, it is a Business Grid.

Many comments have already focused on the health and safety issues concerning the round-about at STEAM at Dr. King. As a teacher at this Elementary School, I echo those concerns. Specifically, I wanted to comment on how the round-about still continues the history of inaccessibility of the school and community to the University, the Hospitals, and economic opportunity.

To illustrate my point, I would like to make a comparison. My own children attended Ed Smith Elementary at the corner of Broad and Lancaster in Syracuse. As 1st graders, both of them took a walking field trip to the Crouse Hospital School of Nursing. They spent time in the morning walking through residential neighborhoods, had a picnic lunch on Syracuse University Campus, and then

continued to the corner of Waverly and Irving for the field trip event. That is a 1.5 mile walk for 1st graders. To take the 1st graders at STEAM at Dr. King (and mind you, they do not go on this same field trip for the very reasons I will detail), they would have to cross MLK Blvd where there is no crossing point, walk up Renwick Ave where there is minimal if any sidewalk, loads of trash, and often fast moving traffic, pass utility facilities, parking lots, and other non-pedestrian friendly areas for the distance of 1 mile. This is one of the legacies of I-81, some families enjoy the benefits of stable home ownership, access to the University (including aspirational), and opportunity, while other families in the city are directly and indirectly told they are separate, less than, and not welcome. Many of the students at STEAM at Dr. King have never stepped on the campus of Syracuse University. Many of them are not even aware of its existence or its proximity because of this historic segregation. How can we as teachers inculcate ambition for higher learning when the students have never seen it for themselves?

The current Community Grid plan focuses on the needs and interests of the University, the hospitals and downtown businesses. This is a not only a missed opportunity to right the historical wrong that I-81 represents, but it also does not consider the economic and employment benefits that might come from integrating the South Side community with the rest of the city. Many families near STEAM at Dr. King, and further south, do not own cars or not reliable ones. They rely on city transportation or pedestrian walkways. By offering safe ways to access the University, hospitals and other interests, the South Side community could access many more of the available work opportunities at those institutions. This would also allow students, both at the University and the Medical school, to access volunteer opportunities on the South Side and enjoy the great cultural diversity and entrepreneur businesses being started there.

My personal preference is for the round-about at STEAM at Dr. King to be moved to a further south position. However, I also understand there may be geographical barriers to doing so. With that in mind, I would like to suggest re-evaluating the plan with an eye towards creating pedestrian and bicycle bridges that would cross the business loop at key points. Many cities are developing stunning examples of such crossings, which could really enhance the look of the city and bring us closer to the goal of a unified Syracuse.

We all have one goal as I see it, to make this city a livable, healthy place that can move into the future with determination, innovation, and community. While every need cannot be met or nor every idea included, it is time to prioritize the South Side with this project and not the many who already have so much.

Thank you for your consideration. Best of luck to you.

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also

provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Beverly Bullock

Albany, NY 12207

Dear Mark and Rick:

I am writing to express my concerns with the announcement of the Community Grid as the Department of Transportations preferred option. I am currently employed at the Super 8, which is located directly off I-81 at exit 25.

I am worried that re-routing I-81 to the current 481 will cause my employer to lose business or close. My schedule and hours are always made based on hotel needs and availability. If the hotel isn't busy enough I could lose hours, ultimately affecting my income.

Everyday our hotel sells anywhere from 5-30 or more additional rooms on the day of arrival. This means guests who did not have a reservation for a particular date, make their reservation on the day they plan to arrive. Some people walk-in to the hotel without a reservation and book a room to stay. Please do not assume that "today's travelers" have planned ahead and know where and when they are staying because of the advancements we've seen in technology. Yes, technology has helped people have unlimited booking options; however, plans change and some people travel alone and cannot safety utilize the technology to make room reservations for themselves while driving. The assumption being made that same day reservations and walk-ins no longer happen in this industry is not based on fact and can have a detrimental effect on my job and income. It is clear and obvious that whomever believes this assumption did not consult with anyone in the hotel industry, especially the hotels located off I-81 in the Town of Salina. Walk-in hotel business and same day reservations (typically made based on location alone) are certainly not a thing of the past and continue to happen daily at hotels all across America. If my hotel were to lose these 5-30 reservations per day because we are no longer located of I-81 it could cost me my job or the jobs of my co-workers. Additionally, it is important to note a large majority of our reservations – in advance or same day of arrival bookings – are made based on our easily accessible location. Most hotels are built next to freeways and Interstate highways for a reason... people want easy access to their travel routes regardless of traveling for business, leisure, passerby, etc.

I implore you conduct more fact based research on how much revenue would be lost from the travel based industry businesses located off I-81, including hotels, gas stations, restaurants and fast food establishments. The Draft Environmental Impact Statement suggests it would only be 1% decline in business. As a person dealing directly with the guests who choose to stay at our hotel because we're right off I-81, I can assure you it's not merely 1%!

Thank you in advance for your consideration.

Sincerely,

Name Shaday Burgos

Dear Mark and Rick:

I am writing to express my concerns with the announcement of the Community Grid as the Department of Transportations preferred option. I am currently employed at the Super 8, which is located directly off I-81 at exit 25.

I am worried that the community grid option will add to my commute time and expenses. I do not live right in Liverpool and use I-81 to get to work daily as do many of my coworkers.

Adding time to my commute will result in less time I am able to spend at home with my family.

Additionally, longer commute times will cost more in gasoline and automobile care as well as childcare expenses.

Please consider the economic impact this will have on my co-workers and me.

Thank you in advance for your consideration.

Sincerely,

Mark Frechette
Project Director
NYS Department of Transportation, Region 3

Dear Mr. Frechette,

I am reaching out in regards to "Community Grid" plans for Interstate 81, and the fact that they exclude the Town of Salina's needs. My place of employment, PDM Estates, is located on 7th North Street in the Town of Salina. I have worked here as a Property Manager for over three years at this point, being an active member of the community, participating in the voting system, attending town meetings, and staying up to date on current events within the area and neighboring areas as well.

I believe that "The Grid" is going to negatively impact the Town of Salina, and the community as the road improvements are happening all around us, yet overlooking necessary improvements at the Northern most trafficked intersection of I-81 in the Town of Salina. The interchange here is ugly, cumbersome, obstructs the view of the Onondaga Lake, and not to mention is a danger to the pedestrian traffic in the area.

As a Property Manager in the Town of Salina, I felt it was my duty to speak up on the matter and represent the needs of the Residents who reside here. We are asking New York State to consider improvements near the Parkway, in hopes that they will spur economic activity, make the entrance to the town more attractive, and by removing the divisions, make the area more pedestrian friendly.

I hope that you take these requests into consideration, not just for myself, but for all of the residents in the Town of Salina. As John Lennon once said, "The people have the power. All we have to do is awaken the power in the people."

Thank you for your time.

Sincerely,

Bri Burrows, Property Manager

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

David Bushman

Tall bridge is the best option.
Others have major drawbacks: grid would create traffic jams, ambulances would not be able to reach hospitals om time to save lives; tunnel would be a trap if accident happens, etc. Tall bridge is the best choice.

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also

provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

ATTENTION: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

Gentlemen,

I would like to make a few comments regarding the proposed ."Community Grid"

1, Why stop traffic on SB 481 to EB Rt 5 exit ramp. Existing merging works well most of the time. A traffic light is unnecessary.

2. Merging traffic from Rt. 5 EB to 481 N will have a very difficult time merging across three lanes of traffic to 690 WB . Existing two lanes are very difficult to merge across now..

3. The impact to businesses on the northside of Syracuse and the Town of Salina will be traumatic.

4. Removal of the viaduct will not improve anything. Any damage to the community was done 60 years ago and can not be undone. It was basically a slum neighborhood anyway..

5. A major flaw in the existing and future plans is no ramp from 690EB to 81NB.

Thank you for your attention.

Route 81 through Syracuse

George Cady <gbcady62@gmail.com>

Mon 9/6/2021 4:12 PM

To: dot.sm.mo.I81Opportunities <dot.sm.mo.I81Opportunities@dot.ny.gov>

ATTENTION: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

I would like to express my thoughts and concerns on the new route 81 through Syracuse. The boulevard plan is excellent for the city os Syracuse, but I am concerned about the increased traffic on current rout 481. Now traffic on 481 comes to a crawl for even minor bridge work. I don't understand how more traffic can be added. I have not heard about an option to build a new highway similar to route 481 around the west side of the city. That would remove truck traffic heading west from the city. It also would provide easier access to route 81 N and S for people living on the west of Syracuse. Another benefit would be to provide an alternative when route 81 (currently 481) is backed up .

Thank you

October 1, 2021

Dear Mark Frechette,

My name is Kelsey Caiello, I have been a homeowner and taxpayer in the Town of Salina for the last 8 years in addition to being a resident in this town for most of my life. The reason for my letter today is to discuss my concerns regarding "The Grid" and its impact to the Town of Salina. This project will almost certainly prove to be a detriment to the town and its residents. While we are all forced to accept that reality, it doesn't make it okay that we are constantly being overlooked every step of the way. Billions of construction dollars are being spent all around the area, perhaps what was most disheartening was to see that construction stops at the northern most extents of the project limits, almost intentionally right at the town line. As I travel this route most days in my daily routine, I know all too well how ugly and cumbersome this intersection is. I ask simply that our voices are heard, and we that we be included in the conversation. If tearing barriers and righting the wrongs of the past is a goal of this proposal, then you are missing huge opportunities to do so, and creating further divide. This intersection is one of the main gateways to town of salina, and one of the most impoverished areas of the town. Might I add that there is future construction planned at almost every main artery leading up to this intersection, yet the intersection itself is being overlooked. It is dangerous to pedestrians and vehicles alike. It obstructs our view to the lake and is a terrible introduction to the town. I also see development is taking place nearby. Now is the time to fix it. In closing, I am requesting that you study this intersection and urge to explore a more creative more aesthetic approach to this area. Thank you again for your consideration.

Sincerely,

Kelsey Caiello

Will there be a south bound on / off ramp at Caughdenoy Road on 481 with the 81 project?

Currently there is only a north bound exit / off ramp for Caughdenoy Road.

There will be no easy access back onto 481 if a tractor trailer inadvertently misses 81 north and gets off at Caughdenoy Road?

We desperately need a south bound exit / on ramp at Caughdenoy Road.

Concerned resident.

Thank you!

Sharon Millhouse

Subject: Tear Down the Structural Racism of I-81

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Jenna Cain

Caiazza Comments on I-81 Viaduct Project

I am not going to submit detailed comments because it is obvious that the community grid option is a forgone conclusion despite the detrimental effects to those living on the NW side of the Syracuse area, the irrational rationale that community grid is necessary to correct a decades-long racist decision, and the claim that the community grid will enhance pedestrian and cyclist mobility and safety. I believe that the decision has already been made by virtue-signaling politicians who currently manage Department of Transportation decisions.

I live in Liverpool and do not accept the travel time analyses used to support the community grid decision. Table 8-2 lists travel times for four alternatives from Liverpool to different locations and those results are not credible. There are changes between travel times from Liverpool to Cicero and Baldwinsville using the existing configuration relative to the no build, viaduct and community grid options. There is no rational way that those configurations could affect travel between those locations all miles north of the project. Of most interest to me is the travel time to Lafayette because whenever I head to points south I currently go through the city on the viaduct. From the existing configuration the travel times claimed are one minute faster with the no build option, four minutes faster with the viaduct option and only one minute slower with the community grid. The claim of a one minute difference with the community grid is an insulting response. That is simply not a credible result. As a result I do not trust any of the estimates. Ultimately there will be detrimental effects for those of us who live on the NW side of Syracuse and your analysis failed to properly account for travel time differences that in the case of getting to the hospitals on University Hill may actually be a matter of life and death.

Advocates for the community grid often claim that the location for the existing viaduct and route through Syracuse was deliberately chosen because it was a Black neighborhood. For example, the US edition of the Guardian claimed that I-81 was built through a historically black neighborhood because of racism. I don't believe that argument holds any water simply because of geography. Once the decision was made to build the highway through Syracuse there was no other choice. To the west is Onondaga Lake, the central business district and a steeper gradient to head south. To the east is the campus of Syracuse University, a large cemetery, and another steeper grade. The only logical place was to the east of Onondaga Lake in the north and then to follow the route of the canal and railroad through the northern part of Syracuse, then between downtown and the University parallel to the path of the railroad coming in from the south. It is unfortunate that was a black neighborhood but it was not a racist decision. The arguments that the community grid will not only redress this incorrectly alleged racist decision but will guarantee that the existing problems of the current poor minority neighborhoods will be solved is also a stretch.

The environmental impact statement claims that the community grid will enhance pedestrian and cyclist mobility and safety. All of the figures included illustrate a system in the best case conditions. Unfortunately Syracuse has conditions that are very difficult for pedestrians and cyclists in the winter. The size of the boulevard is an impediment to pedestrian cross traffic in the best of times. It does not appear to me that sufficient space has been left for snow after it is plowed and that means that pedestrian access goes from inconvenient to dangerous. The same can also be said for bicyclists. I made similar comments previously and I rate the reply as unresponsive.

If I thought there was any chance that the decision hasn't already been made in favor of the community grid I would spend time evaluating the air quality modeling. I have done that kind of work before and I know that the emissions from starting and stopping are markedly higher than from flowing traffic. It is also a given that ground level sources have a bigger impact than elevated sources. As a result it is not clear to me how the community grid option could improve air quality.

Mark Frechette, P.E.
Project Director
New York State Department of Transportation, Region 3
333 East Washington Street
Syracuse, NY 13202

Rick Marquis
Division Administrator
Federal Highway Administration
Leo W. O'Brien Federal Building
11A Clinton Avenue, Suite 719
Albany, NY 12207

Dear Mark and Rick:

I am writing to express my concerns with the announcement of the Community Grid as the Department of Transportations preferred option. I am currently employed at the Homewood Suites by Hilton Syracuse-Liverpool, which is located directly off I-81 at exit 25.

I am worried that re-routing I-81 to the current 481 will cause my employer to lose business or close. My schedule and hours are always made based on hotel needs and availability. If the hotel isn't busy enough I could lose hours, ultimately affecting my income.

Everyday our hotel sells anywhere from 5-30 or more additional rooms on the day of arrival. This means guests who did not have a reservation for a particular date, make their reservation on the day they plan to arrive. Some people walk-in to the hotel without a reservation and book a room to stay. Please do not assume that "today's travelers" have planned ahead and know where and when they are staying because of the advancements we've seen in technology. Yes, technology has helped people have unlimited booking options; however, plans change and some people travel alone and cannot safety utilize the technology to make room reservations for themselves while driving. The assumption being made that same day reservations and walk-ins no longer happen in this industry is not based on fact and can have a detrimental effect on my job and income. It is clear and obvious that whomever believes this assumption did not consult with anyone in the hotel industry, especially the hotels located off I-81 in the Town of Salina. Walk-in hotel business and same day reservations (typically made based on location alone) are certainly not a thing of the past and continue to happen daily at hotels all across America. If my hotel were to lose these 5-30 reservations per day because we are no longer located of I-81 it could cost me my job or the jobs of my co-workers. Additionally, it is important to note a large majority of our reservations – in advance or same day of arrival bookings – are made based on our easily accessible location. Most hotels are built next to freeways and Interstate highways for a reason... people want easy access to their travel routes regardless of traveling for business, leisure, passerby, etc.

I implore you conduct more fact based research on how much revenue would be lost from the travel based industry businesses located off I-81, including hotels, gas stations, restaurants and fast food establishments. The Draft Environmental Impact Statement suggests it would only be 1% decline in business. As a person dealing directly with the guests who choose to stay at our hotel because we're right off I-81, I can assure you it's not merely 1%!

Thank you in advance for your consideration.

Sincerely,

Meylin Calderon
Housekeeper
Homewood Suites Syracuse Liverpool

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Salomon Cameo

Mark Frechette, P.E.
Project Director
New York State Department of Transportation, Region 3
333 East Washington Street
Syracuse, NY 13202

Rick Marquis
Division Administrator
Federal Highway Administration
Leo W. O'Brien Federal Building
11A Clinton Avenue, Suite 719
Albany, NY 12207

Dear Mark and Rick:

I am writing to express my concerns with the announcement of the Community Grid as the Department of Transportations preferred option. I am currently employed at the Homewood Suites by Hilton Syracuse-Liverpool, which is located directly off I-81 at exit 25.

I am worried that re-routing I-81 to the current 481 will cause my employer to lose business or close. My schedule and hours are always made based on hotel needs and availability. If the hotel isn't busy enough I could lose hours, ultimately affecting my income.

Everyday our hotel sells anywhere from 5-30 or more additional rooms on the day of arrival. This means guests who did not have a reservation for a particular date, make their reservation on the day they plan to arrive. Some people walk-in to the hotel without a reservation and book a room to stay. Please do not assume that "today's travelers" have planned ahead and know where and when they are staying because of the advancements we've seen in technology. Yes, technology has helped people have unlimited booking options; however, plans change and some people travel alone and cannot safety utilize the technology to make room reservations for themselves while driving. The assumption being made that same day reservations and walk-ins no longer happen in this industry is not based on fact and can have a detrimental effect on my job and income. It is clear and obvious that whomever believes this assumption did not consult with anyone in the hotel industry, especially the hotels located off I-81 in the Town of Salina. Walk-in hotel business and same day reservations (typically made based on location alone) are certainly not a thing of the past and continue to happen daily at hotels all across America. If my hotel were to lose these 5-30 reservations per day because we are no longer located of I-81 it could cost me my job or the jobs of my co-workers. Additionally, it is important to note a large majority of our reservations – in advance or same day of arrival bookings – are made based on our easily accessible location. Most hotels are built next to freeways and Interstate highways for a reason... people want easy access to their travel routes regardless of traveling for business, leisure, passerby, etc.

I implore you conduct more fact based research on how much revenue would be lost from the travel based industry businesses located off I-81, including hotels, gas stations, restaurants and fast food establishments. The Draft Environmental Impact Statement suggests it would only be 1% decline in business. As a person dealing directly with the guests who choose to stay at our hotel because we're right off I-81, I can assure you it's not merely 1%!

Thank you in advance for your consideration.

Sincerely,

Keilly Canales
Housekeeper
Homewood Suites Syracuse Liverpool

● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Elizabeth Carivan

Hannah Brazil

Subject: Tear Down the Structural Racism of I-81

Dear

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.

Town of Salina
OFFICE OF THE TOWN SUPERVISOR

David M. Carnie

4th Ward Councilor

Nancy A. O'Neil
Secretary to the Supervisor

October 6, 2021

To Whom it May Concern:

I am writing this letter in support of the proposed traffic circle where I-81 connects with Onondaga Lake Parkway, Old Liverpool Road, Buckley Road and Park Street/Hiawatha Blvd. As 4th Ward Salina Town Councilor, I am dedicated to public safety in the 4th Ward. The current interchange is a dangerous combination of roads and bridges for vehicular traffic. There will be improved safety with a traffic circle by removing the bridges and signalized intersections. There will be increased awareness by improving the traffic control signal at Onondaga Lake Parkway to limit vehicular traffic and reduce the accidents that exist at the railroad bridge.

At the same time this shall provide an opportunity to create a corridor to allow safe pedestrian and bicycle facilities restoring connectivity between the City of Syracuse, Town of Salina and the available activity centers around them, specifically Onondaga Lake Parkway & Loop the Lake Trail System, Regional Market & Transportation Center, NBT Stadium, Syracuse Inner Harbor, Destiny USA, Old Liverpool Road, and the Village of Liverpool.

If you have any questions, please do not hesitate to contact me by phone (315) 679-7279, or by email councilorcarnie@gmail.com.

Sincerely,

David M. Carnie

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also

provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Nikki Caroli

However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.

● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal "SEP 14" local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Hope Carr

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.

● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal "SEP 14" local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Susan Castelli-Hill

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.

The best function of 81 traveling north should be to move traffic through the city and further west, North, and East . The Iconic bridge seems the best plan as it will serve the mission of interstate traffic the best. Otherwise Skaneateles, Homer, and Auburn will see major traffic increases. It is indeed an enigma wrapped in a puzzle... good luck .

The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

cf REPARATIONS

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.

● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal "SEP 14" local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

ATTENTION: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

Good afternoon,

Below are comments my hotel will be making on the meeting this afternoon.

Thank you for your consideration.

- Location – Location – Location
- In the hotel industry - Location & Price are the top motivators that drive bookings
- There is a reason people build hotels next to interstates & highways
- Ease of Travel – Convenience – not too far out of the way
  - When it is not convenient to stop – the likelihood they will stop decreases
  - This could mean by-passing Syracuse as whole and making a stop in a more convenient location
- We have worked for years to develop Destiny & the Embassy Suites as a one stop destination easy to get to off the highway and close to downtown. This is part of the allure to book at our hotel.
  - Tour Buses
  - Groups
  - Transient / Leisure travelers
  - Canadian & NYC markets
- We have asked our sales manager & CVB's for years try to sell the city as a destination for city wide events – in competition with other cities
  - Convenience
  - Low Hassle
  - Efficient & well planned events
  - Good Experience for their attendees
- In closing – the revenue impact from moving forward with this project is hard to quantify and it is not clear how the results of this project will affect my business and our city in the long term. However, what is clear, is that it will not provide any benefit to my hotel and it will only provide barriers and inconvenience to our guests which ultimately could drive business elsewhere or to other cities.

ATTENTION: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

We on Ambergate rd in Dewitt can already hear the highway. If 481 is to be expanded or opened up at all to accommodate traffic from 81, then we defiantly would need a sound barrier that is both aesthetically pleasing and functional. I would like to see your plans to mitigate this problem for the neighborhoods adjacent to 481.
Thank you,
Eileen Chappell

To whom it may concern,

If plans for the new 481/81 corridor are to proceed in Dewitt, then we in the Dewittshire Community would need a better sound barrier between us an the highway. We live on Ambergate rd in Dewitt, and the noise is loud as it is….. it will only get louder with more traffic.
Respectfully,
Michael Chappell

Subject: Tear Down the Structural Racism of I-81

Dear

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Mark - you and I have spoken at several earlier meetings on this project. I just want to reaffirm my stance and views.

Removing the interstate thru Syracuse and replacing it with the grid carries many severely negative aspects, especially for truck and other commercial traffic. Re-designating 481 to 81 adds 11 to 14 miles (and corresponding travel time) to the route for traffic continuing north or transitioning westbound from Syracuse. Traffic through the eastern suburbs is already heavy on roads (481 and 690) that without significant improvements can't handle that much increase in traffic. Truck warehouses and service facilities are taken out of the direct routing, especially the ones along the 7th North Street corridor between 690 and the Thruway. From safety, efficiency, and pollution standpoints, trucks do not fare well on surface streets with multiple intersections and traffic lights.

A recent addition to the alternatives is the "iconic bridge," such as the Buffalo Skyway and structures in other cities.

I also speak as a Syracuse resident of the outer university area. Navigating the grid, instead of jumping on or off 81 by Brighton Avenue, is something I'm NOT looking forward to.

The grid isn't going to miraculously fix the "wrongs" done when the original viaduct was built. Interstate 81 needs to be maintained in essentially its same transit through the city of Syracuse, whether with a new improved viaduct or some sort of iconic structure.

Thank you.

ATTENTION: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

With the large numbers of noise walls on this massive project I would like to see consistencies with the design and materials selected throughout the project. I also believe to limit the shadow effects of these tall structures on the affected businesses and neighborhoods that the NYSDOT should consider the use of transparent noise walls as used in the I-81 Binghamton project and the Tappan Zee Bridge project. The transparent noise walls would also help with any security concerns that a solid wall system presents.

Thank you,
Scott Chenet

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Ann Chiaverini

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.

● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal "SEP 14" local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Yvonne Chu

As a city resident I fully support the community grid proposal. The street level boulevard will create a beautiful experience where those of us who bike will feel safe commuting alongside vehicles and pedestrians.

The traffic circle located near Dr. King school does seem to create a more hazardous commute to school especially since many of the students are 'walkers' to that building. It would be better if it could be pushed south to reduce the speed of drivers prior to arriving at that intersection.

Thank you,
Colleen Cicotta

Subject: Tear Down the Structural Racism of I-81

Dear

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Hollyann Clift

● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Peter Coleman

Sharon Millhouse

Subject: Tear Down the Structural Racism of I-81

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.

● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal "SEP 14" local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Douglas Conant

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that still persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. However, the plan ignores the history and the current needs of the environmental justice community that lives adjacent to the viaduct that will be demolished.

It doesn't have to be this way. The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should reflect the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use
● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Conduct a new analysis of land use that adequately considers the trends of the environmental justice community that lives adjacent to the raised viaduct.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth
● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction.
● Create a Community Restoration Fund.

● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity
● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent to Black and Brown Syracuse residents.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children
● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, defined as one used by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Amelia Concepcion

Subject: Tear Down the Structural Racism of I-81

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Herbert Cooper

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Eugene Cornelius

Sharon Millhouse

Subject: Tear Down the Structural Racism of I-81

Dear

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. I think that removing the elevated portion of I-81 and replacing it with a "community grid" boulevard is a terrible idea. All you have to do is look at how the State project on Erie Blvd East between South Beech St and Bridge Street has destroyed that thoroughfare. Bottlenecks have been created at every major intersection with the time required to navigate Erie Blvd East much longer. It is more dangerous going into and out of all the businesses along the corridor because of the reduced lanes. It is dangerous where the number of lanes change from two to areas with a "ghost" third lane and back to two. The bike path that all of this was done for is hardly ever used. That was a 22 million dollar project. I hate to think how badly mobility can be damaged and traffic patterns and drive times can be destroyed with a 2 Billion dollar project. Leave I-81 as it is. Rebuild the viaduct.

Subject: Tear Down the Structural Racism of I-81

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Patricia Coughlin

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Susan Cox

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also

provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Christopher Coyle

August 11, 2021

Mark Frechette, P.E.
Project Director
New York State Department of Transportation, Region 3
333 East Washington Street
Syracuse, NY 13202

Rick Marquis
Division Administrator
Federal Highway Administration
Leo W. O'Brien Federal Building
11A Clinton Avenue, Suite 719
Albany, NY 12207

Dear Mark and Rick:

I am writing to express my concerns with the announcement of the Community Grid as the Department of Transportations preferred option. I am currently employed at the Homewood Suites by Hilton Syracuse-Liverpool, which is located directly off I-81 at exit 25.

I am worried that re-routing I-81 to the current 481 will cause my employer to lose business or close. My schedule and hours are always made based on hotel needs and availability. If the hotel isn't busy enough I could lose hours, ultimately affecting my income.

Everyday our hotel sells anywhere from 5-30 or more additional rooms on the day of arrival. This means guests who did not have a reservation for a particular date, make their reservation on the day they plan to arrive. Some people walk-in to the hotel without a reservation and book a room to stay. Please do not assume that "today's travelers" have planned ahead and know where and when they are staying because of the advancements we've seen in technology. Yes, technology has helped people have unlimited booking options; however, plans change and some people travel alone and cannot safety utilize the technology to make room reservations for themselves while driving. The assumption being made that same day reservations and walk-ins no longer happen in this industry is not based on fact and can have a detrimental effect on my job and income. It is clear and obvious that whomever believes this assumption did not consult with anyone in the hotel industry, especially the hotels located off I-81 in the Town of Salina. Walk-in hotel business and same day reservations (typically made based on location alone) are certainly not a thing of the past and continue to happen daily at hotels all across America. If my hotel were to lose these 5-30 reservations per day because we are no longer located of I-81 it could cost me my job or the jobs of my co-workers. Additionally, it is important to note a large majority of our reservations – in advance or same day of arrival bookings – are made based on our easily accessible location. Most hotels are built next to freeways and Interstate highways for a reason... people want easy access to their travel routes regardless of traveling for business, leisure, passerby, etc.

I implore you conduct more fact based research on how much revenue would be lost from the travel based industry businesses located off I-81, including hotels, gas stations, restaurants and fast food establishments. The Draft Environmental Impact Statement suggests it would only be 1% decline in business. As a person dealing directly with the guests who choose to stay at our hotel because we're right off I-81, I can assure you it's not merely 1%!

Thank you in advance for your consideration.

Sincerely,

Rich Coyne

To: dot.sm.mo.I81Opportunities <dot.sm.mo.I81Opportunities@dot.ny.gov>

ATTENTION: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

To whom it may concern:

I was born and raised in Syracuse and after college and eight years in Seattle, WA I returned with my husband to raise our children.

We lived in DeWitt for 23 years and just last year moved into the City of Syracuse. I do not envy your job and realize this is a huge undertaking - however, I truly feel we as a city have not been given a good choice. Why is it not possible to keep an elevated highway for through traffic only - provide one exit on the north and south sides of the city? That way trucks and business traffic will not be wasting gas using the 481 bypass. We could still have the community grid below - provide better housing, light the streets and make improvements. Lastly, the proposal to eliminate the Fayetteville exit and add more traffic to an already crowded DeWitt exit seems inefficient. It just seems there has to be a better way.

In my view Syracuse has missed several opportunities to improve our city over the years, two most notable for me being: filling in the Erie Canal; not relocating the baseball stadium to either the Inner Harbor or closer to downtown. I feel that we are not fully looking at what we might be able to do. As a side note, it also seems that none of these plans are offering any options for mass transit. Buses are not reliable and convenient - why can't we have a viable option for services (light rail/subway) to the suburbs? And, while I love the notion of bike and pedestrian lanes, this will not solve any traffic issues and realistically with our weather will probably not get a ton of use.

Thanks for your time and I hope there is a reconsideration to improve the project so that everyone wins!

Sincerely,
Mary Anne Cramer

However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.

● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal "SEP 14" local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Emilye Crosby

Dear Mr. Frechette, Mr. Marquis and team:

Thank you for your extensive and thoughtful work on the Draft Environmental Impact Statement (DEIS) for the I-81 Viaduct Project. I very much appreciate the years of anaylsis, project development and stakeholder outreach you have put into this statement. I believe the Community Grid option **is** the best solution for Central New York and it meets the needs for the future of our community. I have been an active participant in CenterState CEO's deliberation on the project for several years. We too looked at a number of alternatives before endorsing the Community Grid as a solution. Further, as you know, we suggested several additonal recommendations which CenterState calls Community Grid Plus. I am pleased you all took those recommendations into serious consideration as you prepared the DEIS. This project will be transformational; for our region's economic growth and environmental stewardship. It can also address the social justice issues created by the orginal building of the viaduct. I ask that you also consider the additional recommendations from CenterState CEO below:

- **Continue to work with the community to consider the relocation of the Roundabout along the path of Business Loop 81 further from the Martin Luther King school, while also making improvements to the school itself.**
- **Reduce the width of Business Loop 81 Right of Way through the city to return as much land as possible for redevelopment.**
- **Work closely with municipalities, residents and businesses adjacent to the highway to logically transfer any land back to the community to facilitate redevelopment. This outstanding opportunity must create more jobs, tax resources and local services where the highway is no longer needed. CEO urges the creation of a community redevelopment commission comprised of these stakeholders to ensure the highest quality, most inclusive redevelopment opportunities.**
- **Do all in its power to maximize opportunity for the work to be done by local businesses and residents.**

Thank you for your consideration of my comments.

Sincerely,

Susan Crossett

Mark Frechette, P.E.
Project Director
New York State Department of Transportation, Region 3
333 East Washington Street
Syracuse, NY 13202

Rick Marquis
Division Administrator
Federal Highway Administration
Leo W. O'Brien Federal Building
11A Clinton Avenue, Suite 719
Albany, NY 12207

Dear Mark and Rick:

I am writing to express my concerns with the announcement of the Community Grid as the Department of Transportations preferred option. I am currently employed at the Homewood Suites by Hilton Syracuse-Liverpool, which is located directly off I-81 at exit 25.

I am worried that re-routing I-81 to the current 481 will cause my employer to lose business or close. My schedule and hours are always made based on hotel needs and availability. If the hotel isn't busy enough I could lose hours, ultimately affecting my income.

Everyday our hotel sells anywhere from 5-30 or more additional rooms on the day of arrival. This means guests who did not have a reservation for a particular date, make their reservation on the day they plan to arrive. Some people walk-in to the hotel without a reservation and book a room to stay. Please do not assume that "today's travelers" have planned ahead and know where and when they are staying because of the advancements we've seen in technology. Yes, technology has helped people have unlimited booking options; however, plans change and some people travel alone and cannot safety utilize the technology to make room reservations for themselves while driving. The assumption being made that same day reservations and walk-ins no longer happen in this industry is not based on fact and can have a detrimental effect on my job and income. It is clear and obvious that whomever believes this assumption did not consult with anyone in the hotel industry, especially the hotels located off I-81 in the Town of Salina. Walk-in hotel business and same day reservations (typically made based on location alone) are certainly not a thing of the past and continue to happen daily at hotels all across America. If my hotel were to lose these 5-30 reservations per day because we are no longer located of I-81 it could cost me my job or the jobs of my co-workers. Additionally, it is important to note a large majority of our reservations – in advance or same day of arrival bookings – are made based on our easily accessible location. Most hotels are built next to freeways and Interstate highways for a reason... people want easy access to their travel routes regardless of traveling for business, leisure, passerby, etc.

I implore you conduct more fact based research on how much revenue would be lost from the travel based industry businesses located off I-81, including hotels, gas stations, restaurants and fast food establishments. The Draft Environmental Impact Statement suggests it would only be 1% decline in business. As a person dealing directly with the guests who choose to stay at our hotel because we're right off I-81, I can assure you it's not merely 1%!

Thank you in advance for your consideration.

Sincerely,

Evelyn Cruz

Subject: Tear Down the Structural Racism of I-81

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Robert Crysler

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.

● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal "SEP 14" local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.**The grid roadway should slow traffic down to 30 miles per hour from Brighton through downtown. Only 11 ft lanes. The roundabout should not be near school children. Sped by school should be twenty miles per hour. All roadways should increase pedestrian friendly, neighborhood friendly atmosphere. No qualified highway. There should be many intersections to siphon off drivers to neighborhood . I agree with all the demands already included in the above letter….actually doing real analysis of environment of takedown before, during and after build to ensure health of residents. Not just a ritual “we got it covered”.this build has a moral and economic mandate to repair and eliminate harm

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

The I81 rebuild - making our metropolitan area better for all

Mary Cunningham <macunnin@hotmail.com>

Fri 9/3/2021 5:21 PM

To: dot.sm.mo.I81Opportunities <dot.sm.mo.I81Opportunities@dot.ny.gov>; Mary Cunningham <macunnin@hotmail.com>

ATTENTION: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

Let me get to the specifics and the end will talk about the justification.

1. There should be no roundabout near the Steam Martin Luther King School. **It will not** adequately slow people down…. Speed should slow down on this road long before the Colvin St exit or entrance, at least at Brighton Ave.
2. We should not be closing the road that leads up the University. This new community grid is meant to open up the Southside to the Eastside of the city not further isolate it as the I-81 HIGHWAY successfully did with great harm to the Southside.
3. The roundabout is too close to the school.
4. The speed past ALL SCHOOLS in the city is and should remain 20 mph. Nottingham High School on the east side is more than 600 feet from the road and all traffic is warned to slow down to **20mph.** This is a school of K-8 with a clinic and large pedestrian traffic. They should not be put in harms way. **All speed throughout streets in the city should be 30 mph, this should not be a qualified highway or business loop**. To enforce this all lanes should be **11' wide not the 12' that encourages faster speeds than 30mph.**
5. Move the roundabout to Brighton Ave or to West St. and E. Fayette St.
6. The roundabout is too confusing for children to "read" and understand how to use or not use it.
7. Local hire according to SEP-14 allows for 30% local hire. Local hire must mean people living in the area that has been harmed by the original I-81, not just county people.
8. **Training must begin to be provided NOW in order for local people to be able to access the jobs.**
9. **Workers must be protected against exposure to lead dust and paint as they work. There must be constant testing of air and soil for lead pollutants. All materials whether iron or soil with lead must be removed with attention to the dangers of lead poisoning which causes permanent damage.**
10. **All neighborhoods in the vicinity of the take down must also be monitored for pollutants as the takedown and rebuild is completed.**

DOT is an arm of our government. As such its job, your job, is not to merely move traffic through as swiftly as possible. As a resident of Fayetteville, I commuted for many years to the city and through the city to the west side. Adding an extra 10 minutes to our travel, if this rebuild even does that, is not too big a price to pay for remembering that we live in a metropolitan area. And when the city does well, the suburbs will do well. We must pay attention and rebuild our city so that we are not one of the most segregated cities in the country with the greatest areas of intense poverty in the country. This is our chance to make the whole metropolitan area healthy again. And DOT has it in its power and purview to contribute to the welfare of all of us, not just commuters. We are rebuilding a neighborhood that must provide jobs, amenities to its residents and pedestrian friendly spaces and walks.

Mary Cunningham, 412 Orchard St. Fayetteville, NY 13066—September 3, 2021

ATTENTION: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

I think it is a bad idea to remove the existing highway in favor of a ground level boulevard. It will divert traffic to 481, which is already busy, compromise what little green space exists on the south side of the city, and negatively impact traffic to a major hospital and university.

It is impossible to drive through Syracuse from south to north at thr present time. Adding traffic and removing the existing thoroughfare is terrible idea.
My parents, mid 70's, and others in the community will attest to the improved traffic flow when 81 opened, despite the obvious ghastly scar on the landscape. But it is there now, the aggrieved people from the 1960s are mostly dead, and DOT should just deal with it by making the needed structural repairs.

It is much easier to reduce speed on the existing I 81 than to deal with the multi year construction process.

NYSDOT,

Looking over the proposed community grid option and it seems great for the City of Syracuse. What about trucks traveling between I-81 and I-690 that use that interchange to go West and South. With the removal of the I-81/I-690 interchange you will have more trucks going either on city streets (BL-81) or increased truck traffic using I-690 to I-481 SB which is out of the way for traffic going to Binghamton and points south.

What about looking at having an interstate loop that goes from Cicero around to Warners towards Camillus and then extend and connect with I-81 near Frontage Road south of Nedrow allowing both passenger and truck traffic to utilize.

Route 173 could be improved to be utilized as a bypass even and connect with the current I-481 and extend around to Cicero as mentioned above to create an Interstate Loop around Syracuse that would help with traffic flow. See Baltimore, MD as an example of an Interstate Loop.

I would like to see the area around Butternut Street be used as on/off ramps for traffic flowing between I-690 and BL-81 to go to the NYS Fairgrounds, and points west and north without having to use Bear Street or other city streets bringing traffic to city speed limits.

Please contact me if you have any questions.

Thanks,
Paul Czajkowski

Subject: Tear Down the Structural Racism of I-81

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Michaela Czerkies

Hannah Brazil

Subject: Tear Down the Structural Racism of I-81

Dear

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Sophie Dahavarian

Sharon Millhouse

Subject: I 81

The lack of a west bound connection when traveling from the south through Syracuse will result in heavy traffic on rural western routes such as routes 20 and 80…Currently the driving time for vehicles traveling from the south is approximately the same to exit in Tully or Lafayette and travel routes 20 or 80 to the Thruway in Weedsport as it is to travel 81 to 690 to NYS thruway .Forcing traffic traveling west to take 481 east around Syracuse will result in truck traffic utilizing routes 20 and 81 instead .

The concept pictures of the proposed downtown viaduct show very little traffic with no trucks and are likely very deceiving as the traffic will surely be bumper to bumper and not conducive to pedestrian or bicycle traffic.

The same effect could be achieved with a much higher raised highway in the current location and relocating several exits , maintaining local traffic and green space below.

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.

● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal "SEP 14" local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Good afternoon. I have been a member of this community for over sixty years. When I have gone to at least three of the meetings about the future of route 81 I have been disappointed with the people there. The people there only seem to believe that taking down the highway is the only way to go. When I ask what real benefits come from this I see a lot of fluff with parks and bike paths. As a person that works on the hill and goes to a lot of events downtown and at the Dome I cannot see any value for myself or anyone that lives in Camillus or areas west of Syracuse. I also have to go down 81 to Cornell and Ithaca on a regular basis. It will be a pain not being able to access 81 south directly from 690 east and coming home is not going to be any better going home. The idea of having to get off of the highway to access another highway does not seem to be in the best interest of our new going Green ideas. It seems that a better solution would be to fix the exit ramp from 690 east to 81 south to better accommodate the traffic getting off on Adams and Harrison St. I realize there would have to take down some buildings but I believe buildings will have to come down for any plan. Lastly I am seeing in the news that we are looking into a Domed soccer and lacrosse facility in Liverpool and an Aquarium in the inner harbor area. Both of these areas will be harder to access for a lot of people coming into the area with out a direct route from the highway. I realize that neither place is directly on 81 but making them harder to access could not be good for a new business and our biggest tax business Destiny would be far harder to access without 81 exits right there. There were may scenarios with drive times being only five or ten minutes longer each way but how many people want to add another fifteen or twenty minutes a day to there commute. I understand that either plan will cause a traffic problem for years but I believe in the long run just making 81 thru Downtown as close as it is should be the way to go. I also hear that 81 as it is divides the city and I think that is very confusing to a lot of people. It makes it sound like 81 keeps people from moving from one side of the city to the other and that is not the

case. Please before we make the wrong decision let people know if there are real benefits that will help the most people that use 81 and not a few people that live in the area or the planners that just think we need something new. I know this type of project might have transformed some cities but I will bet that they were not just like Syracuse with the university and three hospitals and our Downton area and a Convention Center and the War Memorial. Thank you for letting me give my opinion .

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also

provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Erin Darke

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal "SEP 14" local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Stephen Davie

Subject: Tear Down the Structural Racism of I-81

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.

Albany, NY 12207

Dear Mark and Rick:

I am writing to express my concerns with the announcement of the Community Grid as the Department of Transportations preferred option. I am currently employed at the Super 8, which is located directly off I-81 at exit 25.

I am worried that re-routing I-81 to the current 481 will cause my employer to lose business or close. My schedule and hours are always made based on hotel needs and availability. If the hotel isn't busy enough I could lose hours, ultimately affecting my income.

Everyday our hotel sells anywhere from 5-30 or more additional rooms on the day of arrival. This means guests who did not have a reservation for a particular date, make their reservation on the day they plan to arrive. Some people walk-in to the hotel without a reservation and book a room to stay. Please do not assume that "today's travelers" have planned ahead and know where and when they are staying because of the advancements we've seen in technology. Yes, technology has helped people have unlimited booking options; however, plans change and some people travel alone and cannot safety utilize the technology to make room reservations for themselves while driving. The assumption being made that same day reservations and walk-ins no longer happen in this industry is not based on fact and can have a detrimental effect on my job and income. It is clear and obvious that whomever believes this assumption did not consult with anyone in the hotel industry, especially the hotels located off I-81 in the Town of Salina. Walk-in hotel business and same day reservations (typically made based on location alone) are certainly not a thing of the past and continue to happen daily at hotels all across America. If my hotel were to lose these 5-30 reservations per day because we are no longer located of I-81 it could cost me my job or the jobs of my co-workers. Additionally, it is important to note a large majority of our reservations – in advance or same day of arrival bookings – are made based on our easily accessible location. Most hotels are built next to freeways and Interstate highways for a reason... people want easy access to their travel routes regardless of traveling for business, leisure, passerby, etc.

I implore you conduct more fact based research on how much revenue would be lost from the travel based industry businesses located off I-81, including hotels, gas stations, restaurants and fast food establishments. The Draft Environmental Impact Statement suggests it would only be 1% decline in business. As a person dealing directly with the guests who choose to stay at our hotel because we're right off I-81, I can assure you it's not merely 1%!

Thank you in advance for your consideration.

Sincerely,

Kanlianys Davila

Dear Mark and Rick:

I am writing to express my concerns with the announcement of the Community Grid as the Department of Transportations preferred option. I am currently employed at the Super 8, which is located directly off I-81 at exit 26.

I am worried that the community grid option will add to my commute time and expenses. I do not live right in Liverpool and use I-81 to get to work daily as do many of my coworkers.

Adding time to my commute will result in less time I am able to spend at home with my family.

Additionally, longer commute times will cost more in gasoline and automobile care as well as childcare expenses.

Please consider the economic impact this will have on my co-workers and me.

Thank you in advance for your consideration.

Sincerely,

The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Scott Davis

Subject: Tear Down the Structural Racism of I-81

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.

To whom this may concern: I live along the I-81 highway and right near the 481 interchange and the Loretto Facility...I'm really concerned on the impact that this will have on my neighborhood as the traffic coming thru the Loretto pass(this is Lorettos private road that has a bridge over I81) is becoming unbearable with drivers not abiding by stop signs, speeding and the littering is becoming horrible(we have to keep telling Loretto to clean up) or we have to do it ourselves...This summer three accidents have happended and also abusive incidents with drivers.(I have informed Loretto of this and asked for Police drive thrus)Also, you want to direct more traffic thru our streets...the pollution and fumes from 81 is bad enough, and have started to develop breathing issues(I have lived her for 35 years and have noticed the patterns of traffic changing along with drivers disrepect for this area) To this date the traffic noise can be so annoying along with fumes and dust...there are no barriers along this part where our homes are!!!!!.But yet Loretto is requesting a barrier along there area!!! I intend to attend your Aug 18 meeting at the oncenter! I'm just so concerned about my living area...the speeding of cars up and down this street(then pulling in and out of my driveway and ruining the pavement)I live at the top of the hill with no outlet and there is no proper signage(which I have complained about and nothing is done) the littering, and drivers disrepect. We dont want more traffic coming thru this area!!! Tx.Janice Deapo 321 Fillmore Ave Syr 13205

Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use
