The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.

● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Jessica Maxwell

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Kevin McAleer

Sharon Millhouse

Subject: Tear Down the Structural Racism of I-81

Dear

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal "SEP 14" local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Thomas McFarland

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. To: dot.sm.mo.I81Opportunities <dot.sm.mo.I81Opportunities@dot.ny.gov>

ATTENTION: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

To Whom It May concern:

We respectfully take this opportunity for public comment to register our objection to the Draft Design Report (DDR) and related documents regarding the replacement of the I81 viaduct through Syracuse with a “Community Grid” alternative:

* The present I81 viaduct through downtown Syracuse has been in place for more than 50 years. Over this time the inhabitants of the city and the surrounding communities have adjusted and adapted to the present convenient and practical highway and in fact have built and maintained infrastructure, businesses and other venues around the current design. Radically changing this at this point in time will lead to major inconvenience as well as unnecessary and expensive readjustment.

*The community grid option takes Syracuse back to traffic standards of the 1950’s where vehicles inched inefficiently through urban areas. The whole concept violates the very premise on which the interstate highway system was originally built: to speed the flow of traffic (and thus commerce) between and through urban areas in a safe and efficient manner.

* Diverting I81 traffic to I481 will put an undue burden on the eastern suburbs (there is NO by-pass to the west creating a loop as in many other large metropolitan areas). This will create a potentially dangerous mix of high-speed local and long distance traffic as well as increased noise and other environmental concerns for the residents of the eastern communities. The community grid will also take away a practical diversionary alternative in the event of an accident or other event shutting down I481.

*Western towns and villages will likely experience an increase in traffic (especially large trash hauling trucks) who seek to avoid the long bypass to the east on I81.

*Although we are not traffic engineers, we expect that the traffic circle as proposed in the DDR will be a bottleneck leading to frustrating traffic backups and fender benders as we have experienced in similar traffic circles.

*Finally, it appears that very little thought has been given to pedestrian safety with traffic diverted from an elevated highway to street level--we would invite you to try crossing Erie Boulevard at rush hour.

In conclusion it is our humble opinion that the very best alternative to replacing the I81 viaduct is to simply rebuild it in its present form making the necessary adjustments to provide for current safety and efficiency standards.

Respectably submitted,
William and Pamela McGarry
6956 Woodchuck Hill Road
Fayetteville, NY 13066

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.

● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal "SEP 14" local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Ralph McGrew

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Peter McKnight

● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Kerry McNamara

Hannah Brazil

Subject: Tear Down the Structural Racism of I-81

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. To Whom It May Concern,

I live along the Rt 57 corridor and regularly utilize RT 81 through the city of Syracuse. Be it know that I fully support the rebuilding of Rt. 81 at street level, recognizing the benefits to the city of Syracuse, the heart of our community. I look forward to a transformed city to be proud of, and see no bothersome inconvenience by the intended traffic pattern over such a relative short distance. This is a roadway being built for the future, a future quickly approaching in which traffic and traffic management systems will communicate as one, clearing paths for emergency vehicles, eliminating accidents, and assuring efficient transit. I for one am so pleased that the most prudent option has prevailed. Thank you for your efforts, Brian J. Meany, Liverpool NY

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that still persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. However, the plan ignores the history and the current needs of the environmental justice community that lives adjacent to the viaduct that will be demolished.

It doesn't have to be this way. The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should reflect the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use
● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Conduct a new analysis of land use that adequately considers the trends of the environmental justice community that lives adjacent to the raised viaduct.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth
● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction.
● Create a Community Restoration Fund.

● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity
● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent to Black and Brown Syracuse residents.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children
● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, defined as one used by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Brandon Meenan

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also

provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.

● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal "SEP 14" local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Suzette Melendez

Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.

● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal "SEP 14" local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Kaitlyn Menegio-Stahl

● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal "SEP 14" local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

JoAnne Metzler

Tear Down the Structural Racism of I-81

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.

● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal "SEP 14" local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

Rout 81 DEIS Comments.docx;

ATTENTION: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

Attached are my comments concerning the DEIS for the I81 project.

David Michel
315-575-1935

Rout 81 DEIS Comments

My name is David Michel. I now live in the outer Comstock neighborhood in Syracuse after living in the Berkley tract east of Syracuse University for 49 years. I was Syracuse Commissioner of Community Development from 1970 to 2003 and Director of Economic Development from 2004 to 2009. I join many current and former Syracuse elected and appointed officials to support the Community Grid proposal.

The Community Grid will facilitate the reconnection of City neighborhoods, particularly downtown and the University Hill area and eliminate the negative impacts of the current Rt 81 on the City's more distressed neighborhoods. The community grid has limited impact on traffic indices and often the impact is positive compared to the restoration of the viaduct. Finally, the major negative impacts of extensive property acquisition, loss of tax revenue and businesses, if a new viaduct is built are avoided. Only four properties are proposed for acquisition as opposed to 24 for the viaduct alternative.

I recognize some businesses are concerned about the impact of rerouting through traffic to the current 481. It should be recognized that Syracuse is the only City that Rt 81 currently goes through. 81 goes around cities like Watertown, Binghamton, Scranton, and Harrisburg. I think this attitude does not take into account the use of direction devices such as GPS and Smart phones. Customers can easily follow directions to these establishments.

Finally, I encourage the State and Federal government not to delay further the decision making process. The State Department of Transportation has done an excellent job of encouraging citizen input. All parties have had ample time to present their arguments about the various alternatives.

I do have specific comments on some aspects of the proposal:

1) It is critically important that residents of the impacted neighborhoods, particularly more distressed areas, have opportunities to take advantage of the job opportunities resulting from this project. Job training efforts should start now to prepare folks to take advantage of these opportunities. It is encouraging that some of these efforts have begun.

2) There must be an effort to encourage and improve mass transit in the CNY region. Greater use of the bus system will decrease automobile traffic and contribute to the effort to decrease carbon emissions which cause climate change. I recognize several positive steps are planned.

3) There is concern about the location of the "roundabout" near the Martin Luther King Jr. elementary school (the school). While, I feel the issue is more the location of the road than the "roundabout" itself, I recommend that alternatives to mitigate the problems

caused by this situation be explored: I do recognize that currently there are proposed steps to reduce traffic flow through this area: using the current 481 for through traffic and the exit ramp at Colvin.

a) Extending the boulevard portion of BL81 further south; perhaps all the way to Brighton.

b) Perhaps the "roundabout" could be eliminated. A carefully designed long boulevard might achieve the objective to slow down traffic.

c) Could traffic on BL81 through the southside be further reduced by creating an additional exit off lower Brighton Avenue? This step might also address the concerns of businesses on South Salina.

d) At a minimum, the "roundabout" could be mover further south nearer to Colvin if not further. I realize this step could have an impact on the Garfield neighborhood.

e) Finally, the school could be relocated as part of the Blueprint 315 project and Syracuse surge. It already has the highest asthma rated in the City and most agree that it is best not to locate a school near a major highway. Federal community benefit and mitigation funds could be used for this purpose. The school building would not have to be torn down, but could be re-purposed to a use that would not be negatively impact by an adjacent highway. Of course, this concept would have to have buy in from the community and School District.

4) One last comment: The exit to Colvin is a great idea. Additional improvements to Colvin from South Salina to Lancaster may be needed to facilitate the additional traffic flow. The City is already planning improvement to this ROW from Salina to Jamesville Avenue, additional funds would further improve Colvin Street all the way to the SU complex.

Thank you for the opportunity to comment on this critically important project for the future of Syracuse and Central New York

Build Back I-81 to Benefit the Community -utilize conservation corps

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Utilize Local Conservation Corps
● Conservation Corps have been effective in providing valuable job-readiness training and completing project work on federal highway projects across the country utilizing language in MAP21 in the Federal Highway bill. Connecting youth and young adults through conservation corps experiences to the I-81 project and to other workforce development opportunities related to the project will create opportunity and investment in young people in the community hit hardest by racial and environmental inequities. Youth are a powerful voice and should be a big part of the solution for rebuilding the footprint of I-81.

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.

● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal "SEP 14" local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Mark Frachette
Project Director
NYS Department of Transportation, Region 3

Dear Mr. Frachette,

I am reaching out in regards to the "Community Grid" plans for Interstate 81, and the fact that they exclude the Town of Salina's needs. I reside in the Town of Salina with my wife and three children. I do my best to be an active member of the community, and keep up to date on current events within the area and near areas as well.

I feel that "The Grid Project" is going to negatively impact the Town of Salina, and the community as the road improvements are happening all around us, yet overlooking necessary improvements at the Northern most trafficked intersection of I-81 in the Town of Salina. The interchange here is ugly, unwieldly, obstructs the view of the Onondaga Lake, and not to mention is a danger to the pedestrian traffic in the area. I try to avoid this intersection because of how quickly the flow of traffic becomes a mess, especially after work and school hours.

As a resident in the Town of Salina, who has children growing up in the area and this will most likely affect them more than myself even, I felt it was my obligation to reach out to you. We are asking New York State to consider improvements near the Parkway, in hopes that they will spur economic activity, make the entrance to the town more attractive, and by removing the divisions, make the area more pedestrian friendly.

I hope that you seriously take these requests into consideration, not just for myself, but for all of the residents and employees in the Town of Salina.

Thank you for your time.

Sincerely,

Christopher Miller Sr.

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.

● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Dorothy Miller

Sharon Millhouse

Subject: Tear Down the Structural Racism of I-81

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.

Comments on NYSDOT's Interstate 81 Viaduct Project DEIS

submitted by Jacob Miller, 105 Edgemont Dr. Syracuse, NY 13214

While I believe that most of the arguments made by its opponents are valid and have been treated with less than the seriousness or professionalism they deserve by NYSDOT, I reluctantly favor the so-called "Community" Grid alternative. If current engineering technology cannot provide a longer design life for such highway viaduct than fifty years than we shouldn't be (re)building them through the centers of cities. (Though the former assumption was called into question for me at the beginning of 2018 when I observed the Pulaski Skyway carrying Interstate Highway a considerable distance over the New Jersey wetlands west of New York City standing in exactly the same form as I had observed them as a child in the mid 1950s.) Secondly, the grid alternative would take significantly less time to accomplish, with its inevitably very high level of noise in close proximity to both three of Syracuse's hospitals and several major housing developments.

Cost—another potential significant argument—is less clear. Certainly the conversion of the existing street grid beneath and to the west of I-81 would be far far cheaper than the rebuilding of the viaduct. But how the two would compare with all the former's more distant physical improvements designed to ameliorate the greater congestion of the proposed grid both downtown and at the rebuilt interchanges of the new I-81 bypass seems questionable.

The preferred 30 mph BL-81/Almond St "community" grid (about twice the length to which that speed limit would apply to a functional main artery as the current arterial section of Almond) would inevitably result in even greater evening rush hour congestion and slower travel times both around and through downtown Syracuse. And inevitably inbound commuter traffic heading home to the eastern residential parts of the City, diverting from BL-81 to the I-81 bypass, will cause even more afternoon/evening congestion at Exit 3 between Orvilton Corners and Lyndon Corners. The proposed new traffic light along E. Genesee at the southbound exit on to it from the Interstate may make actually getting on to E. Genesee possible, and less nerve racking, during the rush hour, but it will only slow travel time through that area. Lest I be excessively negative about this issue, I should say that the proposed northbound exit from BL-81 on to Colvin Avenue is well-conceived and *would* actually provide some relief from the generally increased congestion stemming from the new grid.

Commercial-interest complaints about the loss of business from hotel/motel/restaurant stops in downtown Syracuse and in North Syracuse and Cicero by *through*-traffic diverted around the metropolitan area seem hard to answer.

The destruction of the residential/retail neighborhood through which I-81 was run between the CBD and the University Hill was, I think, every bit as bad as it has been portrayed. But the subsequent westward expansion of the hospital and university development westward right up to the Interstate precludes the "community" grid allowing any rectification.

Turning to a specific feature of the plan that has aroused controversy I would like to say something in defense of the proposed roundabout at the conjunction of Almond and Martin Luther King East, close to the Martin Luther King School. As a retired land use planner I am of course familiar with the circulation and traffic calming advantages of traffic circles, as well as the suspicion they frequently encounter from the general public in this country due to relative lack of familiarity.

(Personally, I like them esthetically, but moderately dislike negotiating them when behind the wheel.) By chance, as a child, I attended, virtually exclusively by foot, for six years an elementary school located in similar proximity to a traffic circle at a major crossroads in Mount Vernon, NY, a densely populated industrial/commercial/residential city bordering on the Bronx. MacArthur Circle was located where Lincoln Avenue and Gramatan Avenue, perhaps the major east-west and north-south arteries in the city crossed and did so at the northern edge of the Central Business District. *Everyone* walked to school; it had no parking lot, and any teachers that drove had to find a parking space on the street. There were traffic lights on two or three sides of the school where the kids were adjured to cross—and where they usually did. But, sometimes, occasionally, the quickest way home seemed to be across the traffic circle…. For what it's worth in six years there was never an accident involving any of my schoolmates from negotiating the roundabout.

And, finally, turning to a specific feature that both DOT and the City seem to have resisted, I would like to point out the inexplicable absence in the plan of pedestrian bridges over the new BL-81 stretch of Almond Street. Yes, I know they're a pain and an expense to maintain, but if you're going to try and make the case that the new Almond will be an *improvement—easing* east-west pedestrian traffic—you really have to do it. Anybody recently tried to cross Erie Boulevard East? It's possible, just as it's possible to cross Almond presently—but not particularly pleasant when the traffic is heavy.

Mark Frechette
Project Director
NYS Department of Transportation, Region 3

Dear Mr. Frechette,

We are reaching out in regards to the "Community Grid" plans for Interstate 81, and the fact that they exclude the Town of Salina's needs. I reside in the Town of Salina with my son and two dogs, and am also employed here as well. I do my best to be an active member of the community, and keep up to date on current events within the area and near areas as well.

I feel that "The Grid Project" is going to negatively impact the Town of Salina, and the community as the road improvements are happening all around us, yet overlooking necessary improvements at the Northern most trafficked intersection of I-81 in the Town of Salina. The interchange here is ugly, unwieldly, obstructs the view of the Onondaga Lake, and not to mention is a danger to the pedestrian traffic in the area. For being such a beautiful area with natural sights, I hesitate taking my dog on a walk past the park as I worry about the horrid intersection.

As a resident in the Town of Salina, who was born and raised here, I felt it was my responsibility to reach out to you. We are asking New York State to consider improvements near the Parkway, in hopes that they will spur economic activity, make the entrance to the town more attractive, and by removing the divisions, make the area more pedestrian friendly.

I hope that you seriously take these requests into consideration, not just for myself, but for all of the residents and employees in the Town of Salina.

Thank you for your time.

Sincerely,

Michael Miller

Subject: Tear Down the Structural Racism of I-81

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring

requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Peter Miller

Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also

provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Nicole Millman

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. ● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Deidre Moderacki

Subject: Tear Down the Structural Racism of I-81

Dear

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. Syracuse I-81 Redevelopment Project -- DEIS comments

Carlo Moneti <cmoneti@twcny.rr.com>

Tue 10/12/2021 11:22 AM

To: dot.sm.mo.I81Opportunities <dot.sm.mo.I81Opportunities@dot.ny.gov>

ATTENTION: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

Dear NYSDOT:

I humbly resubmit my 2019 DEIS comments and proposal regarding the Syracuse I-81 Redevelopment Project. See links below.

The current NYSDOT I-81 street-grid plan (A.K.A. Community Grid, CG) is, in my opinion, a very weak proposal in the following ways:

1) The original 'community option' of the project was to remove all of I-81 freeway from the city and replace it with an enhanced street-grid; the removal of the viaduct was only 'Exhibit A' of the option; the removal of the viaduct does not a street-grid solution make; the NYSDOT CG plan is not the 'community option' plan;

2) Since the South Side highway and most of the South Side is maintained (only 1.5 miles of street in between), The CG plan is really just a highway rebuild plan with a viaduct removal option, and does little to alter today's traffic patterns; it may worsen them;

3) A significant percent of thru-traffic may still be tempted to cut through the city via the mostly remaining freeway rather than follow new I-81; Erie Blvd will become a newly congested area, hampering north/south traversal.

4) The "Canal District", as presented, will fail miserably as a pedestrian place and will fail to draw new development if Business Loop 'BL-81' ramps cut through it and Erie Blvd becomes the congested intermediary street virtually all BL-81 traffic must cross/navigate to

their destination;

5) There is no discussion of the architectural/visual redesign of the planned I-690 viaduct rebuild through downtown;

6) There is no urban design/redevelopment plan for the vastly altered cityscape (rezoning, new public or private construction, public transit, and long-term development planning).

A true full street-grid solution would provide much more opportunity to improve our street network, radically improve public transit, stimulate development, increase the tax base, and generally to refashion our city for future growth and prosperity.

The heart of the matter:
For a true street-grid solution, the key requirement is to convert all of I-81 freeway within Syracuse into city streets, not just the viaduct. On the southside, remove the berm (to facilitate future development) and connect earlier to several major streets. On the northside, convert to a city street with new development on both sides, and upgrade several parallel streets and intersection to share the traffic. With this approach, street connections fall naturally into place, the 'Canal district' can work, a new 'Canal Park' is created, and an enormous amount of development opportunity arises. Please view the full details in the proposal below:

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.

● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Nimia Rosa Montanez Shipper

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.

● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal "SEP 14" local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Marianne Montero

August 11, 2021

Mark Frechette, P.E.
Project Director
New York State Department of Transportation, Region 3
333 East Washington Street
Syracuse, NY 13202

Rick Marquis
Division Administrator
Federal Highway Administration
Leo W. O'Brien Federal Building
11A Clinton Avenue, Suite 719
Albany, NY 12207

Dear Mark and Rick:

I am writing to express my concerns with the announcement of the Community Grid as the Department of Transportations preferred option. I am currently employed at the Homewood Suites by Hilton Syracuse-Liverpool, which is located directly off I-81 at exit 25.

I am worried that re-routing I-81 to the current 481 will cause my employer to lose business or close. My schedule and hours are always made based on hotel needs and availability. If the hotel isn't busy enough I could lose hours, ultimately affecting my income.

Everyday our hotel sells anywhere from 5-30 or more additional rooms on the day of arrival. This means guests who did not have a reservation for a particular date, make their reservation on the day they plan to arrive. Some people walk-in to the hotel without a reservation and book a room to stay. Please do not assume that "today's travelers" have planned ahead and know where and when they are staying because of the advancements we've seen in technology. Yes, technology has helped people have unlimited booking options; however, plans change and some people travel alone and cannot safety utilize the technology to make room reservations for themselves while driving. The assumption being made that same day reservations and walk-ins no longer happen in this industry is not based on fact and can have a detrimental effect on my job and income. It is clear and obvious that whomever believes this assumption did not consult with anyone in the hotel industry, especially the hotels located off I-81 in the Town of Salina. Walk-in hotel business and same day reservations (typically made based on location alone) are certainly not a thing of the past and continue to happen daily at hotels all across America. If my hotel were to lose these 5-30 reservations per day because we are no longer located of I-81 it could cost me my job or the jobs of my co-workers. Additionally, it is important to note a large majority of our reservations – in advance or same day of arrival bookings – are made based on our easily accessible location. Most hotels are built next to freeways and Interstate highways for a reason... people want easy access to their travel routes regardless of traveling for business, leisure, passerby, etc.

I implore you conduct more fact based research on how much revenue would be lost from the travel based industry businesses located off I-81, including hotels, gas stations, restaurants and fast food establishments. The Draft Environmental Impact Statement suggests it would only be 1% decline in business. As a person dealing directly with the guests who choose to stay at our hotel because we're right off I-81, I can assure you it's not merely 1%!

Thank you in advance for your consideration.

Sincerely,

Rocio Montoya Munoz
Housekeeper
Homewood Suites Syracuse Liverpool

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Alexander Mora

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

Dear I-81 Planners,

We want the I-81 revisions done right! Below please find my suggestions:

-Please make a plan that centers on people: transportation systems are meant to help us all get around. Making infrastructure that delivers *what people need* is essential.

-*Treat water with respect*. Every landscape has its companion waterscape, because all surfaces shed water and have runoff. But when designers treat water like waste, installing ugly basins surrounded by barbed wire, it is a loss and an erasure of an urban waterway.

-Change in any transportation system is simultaneously watershed change: any shift in one place affects something in its nearby water. And every place has water, everywhere is in a watershed. For any change you consider, be sure to ask, where does the runoff go, and how will it shift? In cities, it may not be so obvious, since stormwater can get piped miles from where the rain falls. *Don't diminish or erase urban waterways as you modify I-81*.

-Co-produce the plan *with* local residents, not without them.

-Help make the whole project a learning experience for everyone. University students can help conduct visioning projects using public participatory GIS. They can also help develop ways that kids can get involved in the decision-making and planning.

-Commit to going beyond the narrowly-defined categories that too often undermine good urban planning work. Set up ways to ensure that the plan is integrated and comprehensive. Do not succumb to those simplistic 'evaluation metrics' that threaten infrastructure projects.

-Heed the words of the NYCLU - their statement shows that the people there truly understand what's going on here and what's at stake. This is a rare and amazing chance to do better. In the wake of structural racism in Syracuse, make decisions that address it and improve the infrastructure of our place, making progress toward a better, more equitable future (statement attached as Appendix 1).

Sincerely,

Sharon Moran

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Florence Morris

ATTENTION: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also

provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Yes please to the tear down of the eyesore and bone-headed idea of a superhighway through the middle of our City. Only suburbanites could have dreamt it in the first place. As a many decades City dweller, I am appalled and saddened by what was lost when 81, Upstate hospital, a State psychiatric center and the Everson replaced razed Jewish and Black neighborhoods. Ironically in the name of urban renewal. Today we who live in Syracuse still feel the effects of that bad decision. If you have solicited input from the representatives from the neighborhoods most affected by the New Grid design and they approve, I do too.
Now let's stop talking about it and get it done. And let's put as many Syracusans as possible to work on this project - those with skills and those needing skills. Their pride in the project could go a long way to proving its popularity and success.

ATTENTION: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

I do not agree with the Community Grid. I think 81 should be reconstructed as it is or a sky bridge option. The location of I81 was part of my decision on where to live and purchase a house in N Syracuse. Proximity to 81 is very important to me for work, shopping and visiting relative requiring traveling through Syracuse and using 81 South. I also strongly support the concerns of all of the businesses near the 81 exits who will suffer if the Community Grid replaces 81 through Syracuse and more traffic is diverted to 481. I believe the Community Grid will over burden streets which are already busy.

Thank you for the opportunity to comment.

Subject: NYS DOT Needs to Hear from You!

ATTENTION: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

The NYS DOT needs to hear from you about their Draft Environmental Impact Statement [DEIS] for the I-81 Replacement in the Syracuse region.

This opportunity is the closest thing we have to a referendum on this massive infrastructure project. Your voice on this matter is your vote.

Go to https://webapps.dot.ny.gov/i-81-viaduct-project?utm_medium=301&utm_source=i81.dot.ny.gov for DEIS contents and process.

See various means to communicate with the NYS DOT below the Moving People Statement. Send the message: I support the Community Grid.

Support the Community Grid for I-81 Replacement

Moving People Transportation Coalition asks you to consider making these critical points when communicating with NYS DOT

Critical Point #1: Jobs for local people! Support the training and hiring of local persons for the I-81 reconfiguration and rebuilding, specifically support the Urban Jobs Task Force's Recommendations For Building Equity in the Construction Trades including:

- A pro-Syracuse version of the federal government's Local Hire program (called SEP-14 Local Hire) that provides for training and hiring, and
- CWA-PLA agreement on I-81 that includes unions and community representatives in decision-making on the implementation of the I-81 plan.

Rationale: Social justice requires that chronically disadvantaged persons be made a priority for training and job placement in this huge infrastructure project.

Critical Point #2: Public Participation is Essential. DOT should promote and facilitate active participation by neighborhood groups and the public throughout the design and construction phases.

Rationale:

- Through special initiatives by the DOT, residents' concerns and self-interests need to be given due consideration by their significant and continuous input.
- All Central New Yorkers and Visitors to our region will benefit from ongoing active public participation for many decades

to come.

Critical Point #3: Changes for South Side! Support the new northbound exit at Colvin Street and the new roundabout at Martin Luther King East along Business Loop 81 [BL81]

Rationale:

- The new exit at Colvin will enhance access for the south side to promote business development and residential life. It will help with the diffusion of traffic going to the university and hence reduce the load further north on BL81.
- The new roundabout at MLKJ East will calm and smooth traffic flow as vehicles enter the street grid and hence reduce safety concerns at the nearby MLKJ School.

Critical Point #4: Health and Safety Concerns should be a priority along the street grid of BL81.

Rationale:

- Maximum speed of 30 mph and narrower 11 feet lanes along BL81 between Oswego Blvd and Martin Luther King Jr East will promote public health and safety for pedestrians and cyclists by calming traffic and is likely to reduce air pollution.
- DOT should use input from multiple sources including experts, "on the ground" people and technical measurements for air quality to monitor developments throughout the rebuild process.

Critical Point #5: Public Bus Transit should be an integral part of the Community Grid Plan including cut outs for bus pull overs and accommodations for Bus Rapid Transit in the future along the grid corridor within BL81.

Rationale: The future of our transportation system must put greater reliance on bus traffic to avoid unnecessary parking and to lower the impact of fossil fuels on our environment. DOT must work closer with CENTRO.

The Federal Highway Administration (FHWA) and the New York State Department of Transportation (NYSDOT) will accept comments on the document through 5 p.m. Eastern Daylight Time on September 14, 2021. All substantive comments received will

be summarized and responded to in the Final Design Report/Final EIS for the Project. You may submit your comments using our electronic comment form or by emailing us at i81opportunities@dot.ny.gov; by sending it via U.S. Mail to the addresses below; by leaving a voicemail on the Project hotline, 1-855-I81-TALK (1-855-481-8255); or by providing it verbally at the Project's public hearings. Find out more about the public hearings here.

Comments sent via U.S. Mail can be directed to either address below:

MOVING PEOPLE
TRANSPORTATION COALITION

October 06, 2021

Mr. Mark Frechette, PE
Region 3 Planning and Project Director
New York State Department of Transportation
333 East Washington Street
Syracuse, NY 13202

Dear Mr. Frechette,

Moving People is submitting some additional comments to those offered to you in our October 22, 2020 letter that outlined a set of recommendations. We have come to these further observations and positions after a review of the DDR/DEIS.

To maintain the context of our previous recommendations, the entire letter is herein reproduced with our additional comments italicized after the relevant points in the recommendations section.

Moving People is greatly appreciative of the DOT earnest efforts at public participation with the I-81 project. However, we wish to engage in dialog with you and your staff directly in the short term before the FEIS is issued to further explain our positions and continue exchanging ideas as we update our broad and diverse "members" who number in the thousands.

Dave Babcock, one of the Steering Committee members, will be reaching out to your office in near future with our request for further discussion in an appropriate venue.

Once again, thanks for your enormous undertaking of helping our community to emerge with the best possible replacement alternative for the I-81 Viaduct, the Community Grid.

Original Letter sent 10/22/20

Comments are enclosed from Moving People Transportation Coalition (MPTC) on the most recent Preliminary Draft Design Report / Environmental Impact Statement (pDEIS) available to the public in April 2019.

We appreciate the opportunity to make comments on the pDEIS to improve the NYSDOT I-81 design process and ask that you please address each comment.

Our comments are guided by MPTC's vision of a sustainable regional transportation planning for all neighborhoods that focuses on moving people and not just cars.

Balanced transportation planning should be grounded in access to safe transportation, public safety and social justice to promote sustainable economic growth for all communities. See attached policy statement originally adopted on 09/26/14.

We support the New York State Department of Transportation's (NYSDOT) selection of the Community Grid option as the preferred alternative to replace 1-81 through the City of Syracuse.

We believe a well-designed Community Grid plan will improve transportation service, safety and environmental quality for Syracuse and Central New York because:

1. The Community Grid is the safest option because it corrects current design deficiencies and reduces both the volume and speed of traffic at the center of the city.

2. The Community Grid will improve air and environmental quality and public health by reducing pollution and noise at the center of the city, and by encouraging active, equitable mobility like walking, wheeling and bicycling.

3. The Community Grid option addresses social justice issues impacting minority neighborhoods since the original 1950-60s interstate design decisions and construction.

4. It will remove the rush hour “bottle-neck” at exits, by providing new multiple routes to the University Hill and Hospitals, and downtown destinations. Utilizing the original city street grid will improve traffic options to various locations and reduce traffic congestion.

5. Long distance, “through-traffic” will be diverted around the city center thereby improving daily commuter and visitor safety and access to the city.

6. The Community Grid option will increase the land values of properties adjacent to the current viaduct. The long-term revitalization of the city will be improved with this design option.

7. The Community Grid option has the shortest construction schedule and the lowest project cost.

Moving People Transportation Coalition has worked actively with the NYSDOT, many community groups and stakeholders to design and implement solutions that best address the needs of the community.

We will continue working with the DOT design team, throughout the design and construction phases of the project. We have carefully reviewed the pDEIS with this goal in mind and have developed the following recommendations for NYSDOT's consideration as this project progresses.

RECOMMENDATIONS with Additional Comments [10/01/21] in Italics

1. **Provide a transparent, engaging and effective public input process community wide** throughout the upcoming design and construction efforts to address key project

components in a timely manner:

a. Restart an earnest public engagement process as soon as possible using virtual technology tools as needed to build relationships and include more people in conversations between NYSDOT by utilizing existing neighborhood groups; and

b. Form technical advisory and citizen advisory groups to address questions during design and construction such as construction staging areas, dust and noise control, street design details, and quality of life for residents.

After viewing the DEIS, Moving People offers these additional comments

*"The public needs to be kept informed; the public must be able **to** provide **continuing** input to the project leaders; and the public deserves responses to the ideas we will continue to submit." Please be sure the Final EIS addresses public participation in a specific manner outlining how NYSDOT will seek public input and address public input provided.*

One way we suggest to meet this objective is to form technical advisory and citizen advisory groups to address questions during design and construction such as portions of the project to be contracted, construction staging area plans, dust and noise control methods and procedures, street design details, and air quality controls associated with construction. Please consider securing experienced public participation specialists from outside NYSDOT as warranted to assure this objective will be effectively met.

2. **Design Business Loop-81 [BL-81] with an 11-foot road lane width** from Erie Boulevard to Martin Luther King Boulevard. The Community Grid option should reduce the Almond Street corridor to 115-120' width, to accommodate it as a residential and commercial city street, with shops, restaurants, pedestrian sidewalks, bike lanes, street trees and parking.

3. **Reduce the design speed along Business Loop-81 [BL-81]** from Martin Luther King Boulevard north to Hiawatha Boulevard to 30-40 mph to improve the safety and quality of life for city residents and business owners and to support economic development potential for the future.

4. **Work with stakeholders to plan for transferring ownership of any excess land** along the BL-81 corridor that is currently part of the I-81 right-of-way to a City of Syracuse and Onondaga County collaborative that will identify, plan and oversee execution of development projects on this land

After reviewing the DEIS, Moving People offers these additional comments

Moving People acknowledges that DOT has outlined a plan for "transferring ownership of any excess land" with the following comments:

*Upon the completion of construction, NYSDOT **could dispose** of potential surplus transportation right-of-way in the Central Study Area in accordance with Federal and State law, or the Contractor may sell staging sites. In total, implementation of the Community Grid Alternative could result in 10 to 12.5 acres of surplus transportation right-of-way, depending on how much land would be needed to accommodate the highway, sidewalk, shared use (bicycle and pedestrian) path, and other transportation features. NYSDOT would determine the size and location of the parcels once*

construction is complete

NYSDOT will form a land use working group *consisting of representatives from the city, the city's school district, economic development and economic opportunity organizations, the business community, environmental justice communities, neighborhood residents, and other organizations and stakeholders as appropriate to provide input to NYSDOT in establishing a framework for the nontransportation use of each potential surplus parcel. Further details about the formation of and participation in this working group will be presented* ***during continued project public involvement activities.***

HOWEVER, Moving People takes the position that a "land use working group" should be convened immediately after presentation of the FEIS. All stakeholders should be involved within the context of a collaborative planning body under local control to ensure that broad public interests are served. Such a planning body would utilize urban design principles, carry on its business in a transparent manner and pursue processes and structures of community decision-making.

5. **Employ Community Grid concepts throughout the section of BL-81** between Erie Boulevard and Hiawatha Boulevard to create a lower-speed, traffic-calming, and business-friendly roadway that promotes connectivity/ease of movement by pedestrians/bikes.

After reviewing the DEIS, Moving People offers these additional comments:

Moving People recommends the following stipulations for street design changes, for pedestrian safety and long term community development. They refer to the at grade portion of the Community Grid alternative, from south of I-690 to the existing interchange at Brighton, all streets within city residential and downtown pedestrian neighborhoods. Most of the Community Grid alternative lies outside these residential and downtown neighborhoods.

1. *Street design in pedestrian neighborhoods should not be oversized.*
2. *Oversized street design encourages higher speeds, increased traffic volumes and larger vehicle use, resulting in higher accidents and reduced safety for pedestrians & drivers.*
3. *Traffic speeds to 30 MPH for all downtown and residential city neighborhoods*
4. *All travel lanes should not exceed 11' design width, with corresponding design standards.*
5. *City streets shall not be designed and designated as "qualified highway" streets.*
6. *The "Qualified highway" designation shall not increase street design standards.*
7. *City street design must promote long term economic development & quality of place for the pedestrians in existing and future residential and downtown communities.*

6. **Display the cumulative impact of negative public health concerns in the DEIS** more clearly and holistically, by naming impacts from 50+ years of I-81 on public health with Syracuse as a hot-spot for asthma and other respiratory concerns. Greater clarity about health indicators enables better understandings, clearer responses, and more flexible planning.

After reviewing the DEIS, Moving People is offers these additional comments: Address the public health concerns in the DEIS more clearly and holistically.

- *I-81's location through Syracuse correlates with 50+ years of asthma hot-spots and other respiratory concerns, including lead poisoning. The I-81 project needs preventative measures addressing specific public health concerns.*
- *For the construction phase, DOT specifies contractors adopt a 'dust control plan' and 'lead exposure control plan' We agree, and recommend DOT consider the*

strongest measures for preventing airborne dust, for example New York City's "Construction Dust Rules".

- *We recommend DOT 'emplace' a clean soil layer over lead-contaminated soils near I-81. Soil layering methods are effective but less expensive than basic soil replacement, for reducing lead exposure.*
- *DOT should continue air monitoring after construction.*
- *We encourage the DOT in combining bicycle and walking along streets and trails with tree cover around BL81. Combining sidewalks and trails with adequate shading reduces heat buildup, and also allows cool breezes. These measures can help reduce air pollution exposure and summertime heat in Syracuse. We recommend DOT collaborate with Syracuse's Parks / Forestry Department, on planning multi-use trails as a public health measure.*

7. **Establish a special mitigation fund through collaborative government entities** to provide financial assistance as necessary to facilitate:

a. Investment opportunities for businesses that rely on "driver visibility" and may experience a reduction in traffic as a result of a Community Grid.

b. Urban design assistance to enhance all communities adjacent to the highway.

c. Implementation of a comprehensive, holistic mixed-use and mixed-income revitalization plan for the project area from Adams Street to Brighton Avenue.

d. Funding for losses caused by the reduction of parking in the City of Syracuse.

e. Establish a special fund through the various levels of government to ensure the long-term maintenance of infrastructure and city streets used for the Community Grid.

8. Provide a new exit ramp on BL-81 at Colvin Street for traffic traveling from the south in order to increase connectivity by further dispersing traffic to the Community Street Grid. This exit would improve access both to the South Side and to the University area near Manley Field House.

<u>After reviewing the DEIS, Moving People offers these additional comments:</u>

While Moving People supports the use of the roundabouts in general as a traffic innovation, we think that the proposed roundabout at Martin Luther East is too close to MLK School and should be relocated in the plans further south along BL81.

9. **Conduct a full examination of noise impacts along current portions of 1-81, West Street, and the I-481 corridor.** Work with local residents to develop a plan to design and install sound attenuation measures, where appropriate, that also provide environmental benefits (e.g. vegetation for filtering pollutants, solar panels to generate electricity, cooling/storm water retention, etc.).

10. **Work with Syracuse Builds, Urban Jobs Task Force and other local initiatives to provide workforce training and binding agreements** with contractors to ensure that local residents from disadvantaged neighborhoods are hired in significant numbers to work on the project. Real-time monitoring of compliance to work force hiring goals is critical.

After reviewing the DEIS, Moving People offers these additional comments:

Moving People applauds the plans by DOT to fully engage the initiatives to generate project related jobs for city residents. We expect that the proposed labor quotas will be enforced by DOT with real time monitoring and public reporting using LCP Tracker or similar software.

11. **Integrate into the I-81 project design certain transportation features to enhance the effectiveness of the Community Grid** for bus riders, pedestrians, and bicyclists:

a. Install park-and-ride vehicle lots to be maintained CENTRO with covered protection for bus riders at several key locations to be identified in coordination with the City of Syracuse and its suburban municipalities to enhance moving people by buses from and to homes to work and education centers.

b. Provide safe bicycle and pedestrian pathways in consultation with neighborhood and user groups throughout the project area as a starting point for Smart Street standards impacting commercial and residential neighborhoods of Syracuse that are part of the Community Grid design.

After reviewing the DEIS, Moving People offers these additional comments:

DOT has listed a goal of this plan "to maintain access to existing bus service and enhance transit amenities" within the project limits in and around Downtown Syracuse. We do not find that goal clearly demonstrated in the plan. In fact, the visual visualizations show a BL81 with only passenger cars. A truer depiction should show buses and bus amenities along the BL81. How does the Community Grid maintain access to existing bus transit? We believe the plan to improve transit services should be reenforced and more clearly demonstrated.

12. **Add traffic flow enhancements along the current I-481 (future I-81)**:

a. Redesign Exit 3 and associated intersection with Genesee St. to improve traffic flow.

b. Add an auxiliary southbound exit directly to Butternut Drive and opening the east end of I-690 to connect to Butternut Drive.

c. Provide transportation distribution centers and park-and-ride nodes for future Bus Rapid Transit [BRT] implementation near the re-routed I-81 in Dewitt and at the southern and norther confluences of BL-81 with the rerouted I-81; and

d. Provide grade-separated pedestrian and bicycle crossings along Genesee Street where it crosses the current I-481.

13. **Additional Recommendation for regional transportation with the Community Grid**:

a. Eliminate tolls permanently on Interstate Route 90 (the NY State Thruway) through the Syracuse area for vehicles entering and exiting the Thruway between Exit 39 (Baldwinsville) and Exit 34A (current I-481). Doing so would allow through-vehicles to bypass around the Village of Liverpool and allow another way for

vehicles to bypass around the City. Thruway sound barriers installations are needed to protect the immediately adjacent Town of Salina and Village of Liverpool properties.

b. Transfer jurisdiction or ownership of certain NY State roads to either Onondaga County or to the local municipality to manage truck traffic more locally as needed.

c. Incorporate an analysis for the new Amazon Warehouse and distribution center in the Town of Clay into the "Transportation and Engineering Considerations" for the Community Grid alternative. The second warehouse in Town of Dewitt should be included in such study. Rigorous pursuit of impact data should be explored with all stakeholders. In particular, we ask that its traffic and environmental impact be added, and that local citizens' groups be consulted. Its siting process, and its traffic plan to access Thruway Exits 38 and 37, were opaque, non-inclusive and incomplete.

d. DOT's stated plans for construction health and safety are well-thought through, comparable with New York City's brownfield remediation standards. Proposed fugitive dust controls are especially needed in Syracuse, where lead and other heavy metals embedded in soils pose significant risks. We suggest verifying dust controls by routine construction site air monitoring, as NYC's remediation program does.

<u>After reviewing the DEIS, Moving People offers these additional comments:</u>

a. Exits 34A to 39 of the NYS Thruway are essential to help local traffic navigate during I-81 construction and to supplement the I- 481 Bypass of the City of Syracuse. Permanent elimination of I-90 Thruway tolls for local traffic using these exits has passed the NYS Legislature twice only to be vetoed by Governor Cuomo. This permanent toll-free initiative should be implemented. NYS funding sufficient to replace recent revenue losses sustained by the Thruway due to Covid's reduction of traffic will now likely be required to make this possible.

c. The impacts of the new Amazon Warehouse in Town of Clay and its Distribution
Center in Town of Dewitt on peripheral areas transportation and quality of life must be included into the "Transportation & Engineering Considerations" analyses for the Community Grid Alternative. Traffic and environmental impact data for the region they affect must be studied "after the fact", since input from entities beyond Amazon project siting jurisdictions was not solicited, per Home Rule prerogatives. The only Traffic Plans submitted to OCIDA were done by a company paid by Amazon, using Amazon data. Widening of County Roads to accommodate Amazon traffic were subsequently done within municipalities deemed by OCIDA as having no standing for input during the siting process. It is likely that Amazon prefers using these toll-free local roads but if Thruway I-90 traffic picks up, sound barriers and higher guard rails must be placed to shield Town of Salina and Liverpool Village residential properties within 50 feet of the highway between Exits 37 & 38.

In closing: We value our working relationship with the NYSDOT. We support the current design direction of the DOT Community Grid option.

Further, we acknowledge the efforts of the DOT design team and consultants in addressing one of the most complex “community transportation projects” impacting this city and region for generations.

We look forward to supporting the Community Grid outcome, and to addressing the identified issues with you.

Sincerely,

Peter Sarver, Barry Lentz, Sharon Sherman, David Babcock, Martha Ours, Bob Haley, Pete King, Diana Ryan, Kerin Rigney, Mary Kuhn

I-81 Viaduct Project DEIS Comment Regarding Oakwood Cemetery

Emma Frances Mrakovcic <efmrakov@syr.edu>

Wed 9/22/2021 1:18 AM

To: dot.sm.mo.I81Opportunities <dot.sm.mo.I81Opportunities@dot.ny.gov>

ATTENTION: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

Good afternoon,

As a Landscape Architecture undergraduate student at SUNY College of Environmental Science and Forestry, and neighbor and steward to Oakwood Cemetery, I would like to advocate for restoring access to Oakwood Cemetery's main entrance gate, currently severed from the city by Interstate 81. A redesign of I-81 to a slower, lower-volume road, would minimize noise and visual pollution in Oakwood Cemetery generated by the highway. However, the current community-grid design alternative has the potential to increase noise pollution in the cemetery as trucks and cars brake upon approach to the proposed traffic circle. To mitigate this, extending Almond Street's traffic calming beyond where it is currently proposed to either Colvin or Brighton Avenue, would be beneficial and inclusive of Oakwood Cemetery. If a non-community grid alternative is chosen, it is our hope that access and environmental and cultural impacts to this federally and locally protected site be considered and addressed.

Oakwood Cemetery is a major resource; historically, culturally, locality wise, as well as vital public green space. It is used daily by students and faculty from both Syracuse University and SUNY ESF, as well as residents of the east-side adjacent neighborhoods. A connection to the southside and downtown through the historic main entrance gate provides an unmatched opportunity to reconnect the city through a pedestrian safe and serene park-like setting, as it was originally designed and utilized for decades. It is an opportunity to right the environmental injustice that occurred through the original construction of I-81 which devasted and inequitably separated the southside community from the rest of the city.

This connection would also provide new activity leading to renewal and revitalization in the most historic sections of the cemetery which, is in itself a major asset to the city of Syracuse. Currently these sections are out of sight to most, having been left to demolition by neglect, vandalism, and considered dangerous.

It is important to note that Oakwood Cemetery's current administration (non-for profit) does not have an interest in restoring access to Oakwood's historic main entrance gate. However, our ask is that I-81 be designed so that future administrations could if they chose. This is a once in a lifetime

opportunity to holistically address circulation, environmental justice, reweaving the urban fabric, and so much more in Historic Syracuse, while celebrating the creativity of the rural cemetery movement of the 19th century.

I urge you to consider righting this wrong and restoring access to Oakwood Cemetery's historic main entrance gate. As it's been said, this is a once in a lifetime opportunity.

Thank you for your time and consideration.

Respectfully,

Emma Mrakovcic

Support for the Community Grid

Nancy Mudrick <nmudrick@gmail.com>

Thu 9/2/2021 1:05 PM

To: dot.sm.mo.I81Opportunities <dot.sm.mo.I81Opportunities@dot.ny.gov>

ATTENTION: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

I am a resident of the Town of DeWitt and I strongly SUPPORT the plan for the Community Grid. I am aware that my town has officially come out opposed to the plan, but that position does not represent my view. I base my support on a couple of observations:

- I have seen first hand the beneficial outcome in the Hayes Valley neighborhood of San Francisco where the earthquake damaged freeway was removed, rather than being rebuilt. I look forward to seeing beneficial community impact in Syracuse, without the barrier of a dark dripping highway.
- The I81 – 690 interchanges are extremely dangerous. The left entrance from I81 north to 690 west can be terrifying when one is trying to enter on the left into fast moving traffic while coming off a curve. The entrance the other way, from 690 east to I81 south has inadequate vision from 690 and a short lane to gauge the speed of the I81 south cars for merging. The entrance to I81 north at Adams/Harrison also is dangerous as traffic coming from the south is moving to the right lane to exit onto 690 east, while entering traffic needs to move left to stay on I81 north. I look forward to the additional exits off 690 and I81 (at Colvin) that will spread out some traffic while diverting much thru travel to 481.
- I work at Syracuse University and for many years my office was on the second floor of Brockway Dining Hall, right off Almond St. at Burt St. I could see the congestion on Almond, and often the back-up on I81 North as a lot of cars were funneled into a single intersection. I disagree with those who argue that a rebuilt viaduct is more efficient for access to this dense area of hospital and university than the Community Grid. I find the plan to enable greater spread across more streets very appealing.

I hope that the interests of the City of Syracuse and the community that is located in the immediate area of the highway are given strong weight in assessing the balance of benefit and loss associated with the I81 project.

Sincerely,
Nancy Mudrick

ATTENTION: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.

● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal "SEP 14" local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Susan Alice Mufson

● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also

provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Margaret Murphy

Subject: Tear Down the Structural Racism of I-81

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.

The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Mark Naeser

Subject: Tear Down the Structural Racism of I-81

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Syracuse, NY 13202

Rick Marquis
Division Administrator
Federal Highway Administration
Leo W. O'Brien Federal Building
11A Clinton Avenue, Suite 719
Albany, NY 12207

Dear Mark and Rick:

I am writing to express my concerns with the announcement of the Community Grid as the Department of Transportations preferred option. I am currently employed at the Homewood Suites by Hilton Syracuse-Liverpool, which is located directly off I-81 at exit 25.

I am worried that re-routing I-81 to the current 481 will cause my employer to lose business or close. My schedule and hours are always made based on hotel needs and availability. If the hotel isn't busy enough I could lose hours, ultimately affecting my income.

Everyday our hotel sells anywhere from 5-30 or more additional rooms on the day of arrival. This means guests who did not have a reservation for a particular date, make their reservation on the day they plan to arrive. Some people walk-in to the hotel without a reservation and book a room to stay. Please do not assume that "today's travelers" have planned ahead and know where and when they are staying because of the advancements we've seen in technology. Yes, technology has helped people have unlimited booking options; however, plans change and some people travel alone and cannot safety utilize the technology to make room reservations for themselves while driving. The assumption being made that same day reservations and walk-ins no longer happen in this industry is not based on fact and can have a detrimental effect on my job and income. It is clear and obvious that whomever believes this assumption did not consult with anyone in the hotel industry, especially the hotels located off I-81 in the Town of Salina. Walk-in hotel business and same day reservations (typically made based on location alone) are certainly not a thing of the past and continue to happen daily at hotels all across America. If my hotel were to lose these 5-30 reservations per day because we are no longer located of I-81 it could cost me my job or the jobs of my co-workers. Additionally, it is important to note a large majority of our reservations – in advance or same day of arrival bookings – are made based on our easily accessible location. Most hotels are built next to freeways and Interstate highways for a reason... people want easy access to their travel routes regardless of traveling for business, leisure, passerby, etc.

I implore you conduct more fact based research on how much revenue would be lost from the travel based industry businesses located off I-81, including hotels, gas stations, restaurants and fast food establishments. The Draft Environmental Impact Statement suggests it would only be 1% decline in business. As a person dealing directly with the guests who choose to stay at our hotel because we're right off I-81, I can assure you it's not merely 1%!

Thank you in advance for your consideration.

Sincerely,

Maryanne Nash

Comments on I-81 Viaduct Project

Peter Naughton <pnaw10@gmail.com>

Tue 9/7/2021 1:46 PM

To: dot.sm.mo.I81Opportunities <dot.sm.mo.I81Opportunities@dot.ny.gov>

ATTENTION: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

To Whom it May Concern:

Thank you for the countless hours of work in examining the different options for the I-81 project in Syracuse. I was originally in favor of a tunnel / grid hybrid that would allow for the elimination of the viaduct, while preserving the I-81 mainline, but I understand this would not be feasible. I am now in support of the community grid option. I am eager to see the project begin and get completed.

I wanted to offer a few comments regarding the plans which were recently released.

1) A quick general comment: as long as I-81 exits will need to be renumbered from Syracuse northward, wouldn't this be a great opportunity to renumber ALL the exits, based on mileage rather than sequentially? Many other states made this change with the interstates years ago, and even New York has already converted to mileage-based exits on I-84 and I-99. If the rest of New York's interstates will eventually change to mileage-based exit numbers at some point anyway (as they should), renumbering I-81's exits during this project will eliminate the expense of having to renumber them again in the future. When I travel to other states, I like how you can always tell how far to your exit when the numbers are based on mileage.

2) As a resident of the Fayetteville-Manlius area, I am very happy to see that upgrades will be made to existing I-481 so it will be ready to handle the additional traffic expected before the I-81 viaduct is closed and the I-81 designation replaces I-481.

I am also happy that some attention will be given to the stretch of NY 5 and 92 between 481 and "Lyndon Corners." I drive this stretch every day. I agree, going eastbound, it would be helpful to have a second lane for NY92... all too often, I see people zipping up the middle lane and cutting over at the last minute, rather than dutifully waiting in the right lane with everyone else who is heading for 92.

However, I want to offer a suggestion of HOW this lane should be added. I think **the "free for all" bi-directional center median left turn lane should be eliminated.** At certain times of the day, there's just too much traffic to safely make a left turn from the road or onto the road. Some people turning left onto the road use the center lane as a "merge," which is not its intended purpose. I've often witnessed westbound traffic turning left into Aldi, even though their entrance is clearly "curved" to indicate it's intended for eastbound traffic only. (Westbound traffic is supposed to proceed to the traffic light at Wegmans and turn left there, to get to Aldi.)

The center lane should be converted to become the new 4th eastbound lane, and a jersey wall (or similar) would be installed to keep east/west traffic separated and to ensure people don't turn left where they shouldn't. Similar to Erie Blvd in DeWitt and most of Syracuse, traffic looking to turn left would need to proceed to the next signalized intersection and make a legal U-turn. This stretch of road arguably has more traffic at certain times of the day than Erie Blvd does, and I think traffic flow and safety would both benefit from eliminating most of these left turns.

This would also reduce the amount of additional land needed to be taken for the expansion project - several business owners have already expressed their concerns in the media about how little room there is for the road to expand, without severely impeding upon their parking lots or buildings.

3) **Any improvements to NY5 and NY92 should comply with "Complete Streets," including specific bicycle lanes.** This stretch of road has NO shoulder -- and the storm grates on the sides of the road can be dangerous for bicyclists for a number of reasons. When I bike here, I often have to bike farther into the right lane than I'd prefer. It would be nice to have a bike lane -- or to have the sidewalks updated such that they would be safe and legal for cyclists to use alongside pedestrians. (I generally assume bikes are not allowed on a sidewalk unless otherwise posted.)

4) Last but not least, I love the idea to reconfigure Exit 3 from 481. I think having a single exit point will be better, I just hope that the exit ramp will be long enough to accommodate the volume of traffic that will have to wait at the red light to turn left onto 5 and 92. I also hope that traffic light sensors would be installed to the end of the ramp to ensure stopped traffic doesn't back up to the active highway driving lanes.

Or maybe it would be easier to keep both (3E and 3W) exit ramps, but make westbound 5/92 traffic turn left to get on 481 (future 81) south, using the existing eastbound onramp. If there is any data to suggest there is less traffic going this way, the red lights to allow such movements would be shorter than the red lights needed to let exiting traffic turn left onto 5 / 92.

Thanks!

Peter Naughton
Fayetteville, NY

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.

● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal "SEP 14" local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

n b

● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also

provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Sonja Neill-Turner

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.

● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

I do not live in Syr or in Onondaga County. I do, however, travel into and through the City of Syracuse several times each month. The present condition of the highway is due to lack of on going maintenance throughout its life span; times when infrastructure was let go in lieu of social programs. I know because I worked in county Public Works for almost 40 years. Start at one end and repair and replace sections of the highway and forget the grid concept. All of the money spent to date debating the topic, hiring engineers, holding endless public meetings and all the other related costs would have been better used to fund needed repairs. Don't interrupt the flow of traffic through the City and to businesses, many who selected sites for their business related to Rt 81 corridor. Rebuild the status quo.

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Kevin Nelson

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.

To: dot.sm.mo.I81Opportunities <dot.sm.mo.I81Opportunities@dot.ny.gov>

ATTENTION: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

Good evening, my name is Timothy Nelson. I just wanted to share my concern about the Interstate 81 project.

When I was a kid, I grew up at 106 Gage Court which is a block away from the highway as a routes along Almond Street.

Growing up in that area with the highway overhead was constantly noisy, constantly dirty, and all of the windows in the Apartment that we had to look out, was always covered with soot so there was never looking out the window at a sunny clear day.

Across Almond Street was Wilson Park which had a sprinkler and a swimming pool.

The constant dust as we cross the street to the park would cover our feet if we wore flip-flops to the pool ....of course as youngsters, not knowing the chemicals road debris or anything that comes off of the overhead vehicles that was washed and splashed over down to the sidewalks and streets or contaminants that would be tracked along with us.

My concern, is that everyone has voiced an opinion, but not listing their concerns in the true sense of 'priorities'.

For example. The number one priority is how any project would impact the life and health of a human being.

The second priority would be the impact it may have the surrounding environment.

And a third priority would possibly be the inconvenience.

Officials have taken an oath of a sort, to uphold the betterment of the... people, people, people... that they serve, not the conveniences or inconveniences of a person's daily Affairs.

What I mean by that is: the stronger voice because of the amount of people expressing it, only falls in the category of "what is an inconvenience." Or, " I have to drive 15 minutes longer to and from." The inconvenience does not overshadow the Health and Welfare of a human beings daily living. And it should not even be in the same context of consideration.

For example if it was a snowy day and you had to leave 15 minutes early for work you would do it without hesitation and no overly concern.

If your child I was fortunate enough to make the soccer team, or the dance class and had to be dropped off 15 minutes early or picked up 15 minutes later you would do that without hesitation and it would not be a concern.

So to alter your daily convenience because of a longer Drive and to say you would rather impact the health of a child living in the area that would be affected by Interstate 81 to me, shows priorities are not in the right place. So regardless of who has the bigger bullhorn the number one priority should be how will it impact the health and daily living of the children, parents, and seniors of people living in the area.

When that is addressed, then perhaps move on to what would be secondary thank you for listening.

Timothy Nelson

● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Eric Newman

Sharon Millhouse

Subject: Tear Down the Structural Racism of I-81

Dear

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Albany, NY 12207

Dear Mark and Rick:

I am writing to express my concerns with the announcement of the Community Grid as the Department of Transportations preferred option. I am currently employed at the Homewood Suites by Hilton Syracuse-Liverpool, which is located directly off I-81 at exit 25.

I am worried that re-routing I-81 to the current 481 will cause my employer to lose business or close. My schedule and hours are always made based on hotel needs and availability. If the hotel isn't busy enough I could lose hours, ultimately affecting my income.

Everyday our hotel sells anywhere from 5-30 or more additional rooms on the day of arrival. This means guests who did not have a reservation for a particular date, make their reservation on the day they plan to arrive. Some people walk-in to the hotel without a reservation and book a room to stay. Please do not assume that "today's travelers" have planned ahead and know where and when they are staying because of the advancements we've seen in technology. Yes, technology has helped people have unlimited booking options; however, plans change and some people travel alone and cannot safety utilize the technology to make room reservations for themselves while driving. The assumption being made that same day reservations and walk-ins no longer happen in this industry is not based on fact and can have a detrimental effect on my job and income. It is clear and obvious that whomever believes this assumption did not consult with anyone in the hotel industry, especially the hotels located off I-81 in the Town of Salina. Walk-in hotel business and same day reservations (typically made based on location alone) are certainly not a thing of the past and continue to happen daily at hotels all across America. If my hotel were to lose these 5-30 reservations per day because we are no longer located of I-81 it could cost me my job or the jobs of my co-workers. Additionally, it is important to note a large majority of our reservations – in advance or same day of arrival bookings – are made based on our easily accessible location. Most hotels are built next to freeways and Interstate highways for a reason... people want easy access to their travel routes regardless of traveling for business, leisure, passerby, etc.

I implore you conduct more fact based research on how much revenue would be lost from the travel based industry businesses located off I-81, including hotels, gas stations, restaurants and fast food establishments. The Draft Environmental Impact Statement suggests it would only be 1% decline in business. As a person dealing directly with the guests who choose to stay at our hotel because we're right off I-81, I can assure you it's not merely 1%!

Thank you in advance for your consideration.

Sincerely,

MARy Nguyen

> Sirs,
> Not having Route 81 southbound through the city is not the right answer. If a community grid is desired than a tunnel should be built and utilized FOR FLOW THROUGH TRAFFIC. I KEEP HEARING A MILE AND ONE HALF which is not very far. I believe if planned correctly experienced companies can use tooling and knowledge from current and previous road tunnels being built, planned and used throughout the world to accommodate what everyone seems to be asking for at a reasonable price. A community grid and a through road for through traffic. Rerouting traffic around the city to the east and south is the totally wrong move. A tunnel is the best alternative by far.

Subject: Tear Down the Structural Racism of I-81

Dear

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Deborah Nicol

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

PHILIP NIX

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.

● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Irma Norris

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.

● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

Leo W. O'Brien Federal Building
11A Clinton Avenue, Suite 719
Albany, NY 12207

Dear Mark and Rick:

I am writing to express my concerns with the announcement of the Community Grid as the Department of Transportations preferred option. I am currently employed at the Homewood Suites by Hilton Syracuse-Liverpool, which is located directly off I-81 at exit 25.

I am worried that re-routing I-81 to the current 481 will cause my employer to lose business or close. My schedule and hours are always made based on hotel needs and availability. If the hotel isn't busy enough I could lose hours, ultimately affecting my income.

Everyday our hotel sells anywhere from 5-30 or more additional rooms on the day of arrival. This means guests who did not have a reservation for a particular date, make their reservation on the day they plan to arrive. Some people walk-in to the hotel without a reservation and book a room to stay. Please do not assume that "today's travelers" have planned ahead and know where and when they are staying because of the advancements we've seen in technology. Yes, technology has helped people have unlimited booking options; however, plans change and some people travel alone and cannot safety utilize the technology to make room reservations for themselves while driving. The assumption being made that same day reservations and walk-ins no longer happen in this industry is not based on fact and can have a detrimental effect on my job and income. It is clear and obvious that whomever believes this assumption did not consult with anyone in the hotel industry, especially the hotels located off I-81 in the Town of Salina. Walk-in hotel business and same day reservations (typically made based on location alone) are certainly not a thing of the past and continue to happen daily at hotels all across America. If my hotel were to lose these 5-30 reservations per day because we are no longer located of I-81 it could cost me my job or the jobs of my co-workers. Additionally, it is important to note a large majority of our reservations – in advance or same day of arrival bookings – are made based on our easily accessible location. Most hotels are built next to freeways and Interstate highways for a reason... people want easy access to their travel routes regardless of traveling for business, leisure, passerby, etc.

I implore you conduct more fact based research on how much revenue would be lost from the travel based industry businesses located off I-81, including hotels, gas stations, restaurants and fast food establishments. The Draft Environmental Impact Statement suggests it would only be 1% decline in business. As a person dealing directly with the guests who choose to stay at our hotel because we're right off I-81, I can assure you it's not merely 1%!

Thank you in advance for your consideration.

Sincerely,

Carol Oakley

Dear Mark and Rick:

I am writing to express my concerns with the announcement of the Community Grid as the Department of Transportations preferred option. I am currently employed at the Homewood Suites, Hampton Inn & Suites, Tru and Super 8, which is located directly off I-81 at exit 25.

I am worried that the community grid option will add to my commute time and expenses. I do not live right in Liverpool and use I-81 to get to work daily as do many of my coworkers.

Adding time to my commute will result in less time I am able to spend at home with my family.

Additionally, longer commute times will cost more in gasoline and automobile care as well as childcare expenses.

Please consider the economic impact this will have on my co-workers and me.

Thank you in advance for your consideration.

Sincerely,

Carol Oakley

Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Jessica Obie

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. ATTENTION: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

We need a consensus plan that meets the needs of all residents, like the Grid + Bridge design. A grid only plan will slow traffic down, especially if that traffic is headed to the Carrier Dome or the State Fairgrounds during the fair and/or an amphitheater concert. Grid supporters argue that you can take I-481 from South of Syracuse to get to I I-690. That is out of the way if you want to go West of Downtown. I don't want to have to choose between driving through traffic lights in backed up traffic and going out of my way on I-481. We need to maintain high speed access through Syracuse proper. Eliminating that high speed access will deter people from visiting Syracuse, especially the people South of the city. You have to go through downtown to get from South if Syracuse to almost anywhere else in the area. I live in Cortland and if Syracuse loses high speed access, I, along with many other people, will stop visiting Syracuse. Personally, I'd rather go to Ithaca or Binghamton than deal with a community grid. The community grid will be the community gridlock. Please do not force that on Syracuse and the rest of Central New York. Thank you.

Sincerely,

Adam Ocon

Subject: Tear Down the Structural Racism of I-81

Dear

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Karen O' Connor

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.

● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal "SEP 14" local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

I have watched the i81 videos and looked at the DOT Viaduct maps.

I strongly feel that the Community Grid alternative is the best option for Syracuse and all its residents. I feel that the plan will provide a safe and rapid way for thru traffic to circumnavigate the city and those who want/need to enter the city and good options for doing so. I am sure there are 'tweaks' that can be made - but overall, this is a good plan.

Thank you for your work on this project.

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.

● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal "SEP 14" local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Samantha Orszulak

Hannah Brazil

Subject: Tear Down the Structural Racism of I-81

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.

● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Janice Otis

Sharon Millhouse

Subject: Tear Down the Structural Racism of I-81

Dear

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

August 11, 2021

Mark Frechette, P.E.
Project Director
New York State Department of Transportation, Region 3
333 East Washington Street
Syracuse, NY 13202

Rick Marquis
Division Administrator
Federal Highway Administration
Leo W. O'Brien Federal Building
11A Clinton Avenue, Suite 719
Albany, NY 12207

Dear Mark and Rick:

I am writing to express my concerns with the announcement of the Community Grid as the Department of Transportations preferred option. I am currently employed at the Homewood Suites by Hilton Syracuse-Liverpool, which is located directly off I-81 at exit 25.

I am worried that re-routing I-81 to the current 481 will cause my employer to lose business or close. My schedule and hours are always made based on hotel needs and availability. If the hotel isn't busy enough I could lose hours, ultimately affecting my income.

Everyday our hotel sells anywhere from 5-30 or more additional rooms on the day of arrival. This means guests who did not have a reservation for a particular date, make their reservation on the day they plan to arrive. Some people walk-in to the hotel without a reservation and book a room to stay. Please do not assume that "today's travelers" have planned ahead and know where and when they are staying because of the advancements we've seen in technology. Yes, technology has helped people have unlimited booking options; however, plans change and some people travel alone and cannot safety utilize the technology to make room reservations for themselves while driving. The assumption being made that same day reservations and walk-ins no longer happen in this industry is not based on fact and can have a detrimental effect on my job and income. It is clear and obvious that whomever believes this assumption did not consult with anyone in the hotel industry, especially the hotels located off I-81 in the Town of Salina. Walk-in hotel business and same day reservations (typically made based on location alone) are certainly not a thing of the past and continue to happen daily at hotels all across America. If my hotel were to lose these 5-30 reservations per day because we are no longer located of I-81 it could cost me my job or the jobs of my co-workers. Additionally, it is important to note a large majority of our reservations – in advance or same day of arrival bookings – are made based on our easily accessible location. Most hotels are built next to freeways and Interstate highways for a reason... people want easy access to their travel routes regardless of traveling for business, leisure, passerby, etc.

I implore you conduct more fact based research on how much revenue would be lost from the travel based industry businesses located off I-81, including hotels, gas stations, restaurants and fast food establishments. The Draft Environmental Impact Statement suggests it would only be 1% decline in business. As a person dealing directly with the guests who choose to stay at our hotel because we're right off I-81, I can assure you it's not merely 1%!

Thank you in advance for your consideration.

Sincerely,

Zachary Owens
Houseperson
Homewood Suites Syracuse Liverpool

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.

● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Karon Ozols
