● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.

● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Michael DeBartolo

Sharon Millhouse

Subject: Tear Down the Structural Racism of I-81

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Allison Demas

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.

● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal "SEP 14" local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.

Albany, NY 12207

Subject: Draft Environmental Impact Statement (DEIS)
FHWA Interstate 81 Viaduct Project, New York

Dear Mr. Marquis:

The U.S. Department of the Interior (Department) has reviewed the DEIS including the draft Section 4(f) evaluation for the Interstate 81 (I-81) Project in New York State. The I-81 Viaduct Project would address structural deficiencies, non-standard highway features, and create an improved transportation corridor through the City of Syracuse. The project would include modifications to I-81, Interstate 690, Interstate 481, related highway interchanges and local streets in Onondaga County, New York. The following comments on this project, prepared by the Department's National Park Service (NPS), are offered for your consideration.

Section 4(f) Evaluation Comments

The Department concurs with the Federal Highway Administration (FHWA) determination that Community Grid Alternative (Preferred Alternative) would result in the *de minimis* impact under Section 4(f) on 13 identified Section 4(f) historic resources in the project area. In addition, we understand that FHWA and New York State Department of Transportation (NYSDOT) worked to develop and apply measures to minimize harm to these Section 4(f) properties through a series of refinements, including the design of roadway alignments.

The FHWA also determined there will be no adverse effect to historic properties in the area under Section 106. In a letter dated March 4, 2021, the New York State Historic Preservation Office (NY SHPO) concurred with the Section 106 finding, and FHWA is using this concurrence to support their de minimis finding. In addition, we understand that FHWA is working with the NY SHPO and the Advisory Council on Historic Preservation on a draft Programmatic Agreement for this project.

The Department acknowledges that for one Section 4(f) resource, Wilson Park, there would be a Section 4(f) use from temporary occupation. A 20-foot-wide strip of the park would be occupied during construction for equipment staging during the removal of the existing highway viaduct. In total, a temporary easement on 0.12 acres of Wilson Park would be required for approximately two years of the five-year construction period. Use of this Section 4(f) property would occur due to temporary occupancy, which would be considered adverse in terms of the statute's preservation purpose as determined by the criteria in 23 CFR 774.13(d).

The Department also acknowledges that to mitigate for this temporary loss of parkland, NYSDOT would make numerous improvements within the portion of the park that would remain open. Once construction is complete, the existing eastern basketball court would be reconstructed, and the adjacent lawn area would be graded and reseeded. Thus, the park would be returned to include its current uses, in the same or improved condition, upon the completion of construction.

We also understand FHWA is coordinating this proposed use with the officials who have jurisdiction over Wilson Park, including the City of Syracuse Department of Parks, Recreation, and Youth Programs and the Syracuse Housing Authority (SHA). Prior to making Section 4(f) approvals, FHWA must coordinate with these officials and provide the Section 4(f) evaluation for comment. The officials having jurisdiction over the Section 4(f) lands must agree in writing with the assessment of impacts the proposed project will have on Section 4(f) resources and the proposed mitigation.

The Department encourages FHWA to complete its coordination with the City of Syracuse Department of Parks, Recreation, and Youth Programs and the SHA, and provide their concurrence with the final Section 4(f) Evaluation. The Department has no objection to the Section 4(f) approval, provided that concurrence letters from City of Syracuse Department of Parks, Recreation, and Youth Programs and the SHA, be included in the final Section 4(f) Evaluation.

Section 6(f) Evaluation Comments

Section 6(f) of the Land and Water Conservation Fund (LWCF) Act (now codified at 54 U.S.C. §200305(f)(3)) provides, in part, that:

> *…no property acquired or developed with assistance under this section shall, without the approval of the Secretary, be converted to other than public outdoor recreation uses. The Secretary shall approve such conversion only if he finds it to be in accord with the then existing comprehensive statewide outdoor recreation plan and only upon such conditions as they deem necessary to assure the substitution of other recreation properties of at least equal fair market value and reasonable equivalent usefulness and location.*

There are LWCF protected parklands in and around the project area, as described in the DEIS. Based on a review of the document by the NPS, the proposed project should not cause a conversion of LWCF properties. However, should the project alignment change and result in a conversion of LWCF protected parkland at Forman Park or any other LWCF assisted site in the

study area, coordination with the NPS and the New York State Office of Parks, Recreation and Historic Preservation would be required.

Urban Park and Recreation Recovery Program (UPARR) Comments

In accordance with Section 1010 of the UPARR Act (now codified at 54 U.S.C. 200507), no property improved or developed with UPARR assistance shall be converted to other than public recreation uses without the approval of the Secretary of the Interior.

The proposed project will temporarily impact Wilson Park, a UPARR assisted site, as described above in the Section 4(f) Evaluation Comments. Since the impacts to recreation resources are not permanent and the park will be returned to its current uses upon the completion of construction, no UPARR conversion is caused. However, should the project change and result in a conversion of UPARR protected parkland at Wilson Park or any other UPARR assisted site in the study area, coordination with the NPS would be required.

Thank you for the opportunity to review and comment on this project. If you have questions regarding these comments, please contact Mark Eberle, National Park Service, at (215) 597-1258, or mark_eberle@nps.gov. Please contact me at 617-223-8565 if I can be of further assistance.

Sincerely,

Andrew L. Raddant
Regional Environmental Officer

The DOT must also

provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Samantha Desch

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also

provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Deborah Dewey

Subject: Tear Down the Structural Racism of I-81

Dear

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

Dear Mark and Rick:

I am writing to express my concerns with the announcement of the Community Grid as the Department of Transportations preferred option. I am currently employed at the Super 8, which is located directly off I-81 at exit 25.

I am worried that re-routing I-81 to the current 481 will cause my employer to lose business or close. My schedule and hours are always made based on hotel needs and availability. If the hotel isn't busy enough I could lose hours, ultimately affecting my income.

Everyday our hotel sells anywhere from 5-30 or more additional rooms on the day of arrival. This means guests who did not have a reservation for a particular date, make their reservation on the day they plan to arrive. Some people walk-in to the hotel without a reservation and book a room to stay. Please do not assume that "today's travelers" have planned ahead and know where and when they are staying because of the advancements we've seen in technology. Yes, technology has helped people have unlimited booking options; however, plans change and some people travel alone and cannot safety utilize the technology to make room reservations for themselves while driving. The assumption being made that same day reservations and walk-ins no longer happen in this industry is not based on fact and can have a detrimental effect on my job and income. It is clear and obvious that whomever believes this assumption did not consult with anyone in the hotel industry, especially the hotels located off I-81 in the Town of Salina. Walk-in hotel business and same day reservations (typically made based on location alone) are certainly not a thing of the past and continue to happen daily at hotels all across America. If my hotel were to lose these 5-30 reservations per day because we are no longer located of I-81 it could cost me my job or the jobs of my co-workers. Additionally, it is important to note a large majority of our reservations – in advance or same day of arrival bookings – are made based on our easily accessible location. Most hotels are built next to freeways and Interstate highways for a reason... people want easy access to their travel routes regardless of traveling for business, leisure, passerby, etc.

I implore you conduct more fact based research on how much revenue would be lost from the travel based industry businesses located off I-81, including hotels, gas stations, restaurants and fast food establishments. The Draft Environmental Impact Statement suggests it would only be 1% decline in business. As a person dealing directly with the guests who choose to stay at our hotel because we're right off I-81, I can assure you it's not merely 1%!

Thank you in advance for your consideration.

Sincerely,

Name Angie Diaz

Dear Mark and Rick:

I am writing to express my concerns with the announcement of the Community Grid as the Department of Transportations preferred option. I am currently employed at the Super 8, which is located directly off I-81 at exit 25.

I am worried that the community grid option will add to my commute time and expenses. I do not live right in Liverpool and use I-81 to get to work daily as do many of my coworkers.

Adding time to my commute will result in less time I am able to spend at home with my family.

Additionally, longer commute times will cost more in gasoline and automobile care as well as childcare expenses.

Please consider the economic impact this will have on my co-workers and me.

Thank you in advance for your consideration.

Sincerely,

To: dot.sm.mo.I81Opportunities <dot.sm.mo.I81Opportunities@dot.ny.gov>

ATTENTION: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

To the New York State Department of Transportation:

I am in strong support of the community grid option. I have been following this crucially important issue very closely, reading the many articles in the paper and on the PA_CNY website and attending many meetings and presentations. We are fortunate to have 481 in place to accommodate thru traffic. The fears about congestion in the city show a stubborn refusal to consider the community grid. The grid will be successful if it is designed by talented, experienced urban planners with vision and imagination, not by highway builders.

Rebuilding the viaduct would be very costly and disruptive. A new viaduct would have to be substantially wider with more on and off ramps, even more drastically dividing the city. Many buildings would be demolished, many people and businesses would have to relocate.

The tunnel option is much more expensive and will take much more time to build and will cause much more destruction and disruption than the community grid. Proponents of the tunnel option say it is necessary because of the traffic congestion. How many exits and entries will the tunnel have? One exit? One entry? We will have the same bottleneck going to the university and to the hospitals as we have now. A community grid will also not need the kind of expensive maintenance and repair that will greatly add to the cost of a tunnel. Where does the car exhaust from the tunnel go? The additional money needed for this option should be put towards our many other pressing infrastructure needs.

I am very disappointed that so many suburbanites put their own minor inconvenience ahead of the common good—studies have shown that the community grid will add only a few minutes to most commuting times. The concerns of the hotels on the northern section of I81 are valid. However, most people today look up hotels and restaurants on their phones. Signs at exits will also inform travelers. The claims of the Destiny mall are hollow—the mall does not depend on people driving by and deciding to stop and shop, especially not truckers.

This is a crucial decision for our community and will impact Syracuse far into the future. I implore you to support the community grid option for replacing the I-81 viaduct and thank you for your consideration of my comments.

Sincerely,
Margrit Diehl

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Jacqueline DiSalvo

● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.

● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal "SEP 14" local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

DOUGLAS E DONAHUE

Tear Down the Structural Racism of I-81

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. Subject: Potential Mapping Issue

Hi,

I just received the large foldout map of the project – thanks so much for sending this along.

As I was reviewing it, I noticed a potential issue that maybe you could explain, if not update on later versions of the mapping.

The area of concern is where Business 81 intersects I690, then continues on north of 690. Unless I missed it, it doesn't appear that the detailed mapping covers this interface area, so it is unclear to me as to how the highway will go under 690, then left to continue on northward. Maybe I'm missing something, but in my former life as a civil engineer, I'm pretty familiar with such mapping.

Anyway, thanks for the opportunity to respond/ comment…..and please say hello to Mark Frechette for me.

John P. Donohue, P.E.

ATTENTION: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

To the Project Team:

I support the choice of the Community Grid Alternative. Its focus should be on bringing people to the city, not accommodating people traveling through the city. It should accommodate local street life while discouraging through-traffic. To that end, lanes should be no more than 10 feet wide to encourage slower traffic speeds. Some people are worried that there will be traffic congestion. I believe that if the grid is designed correctly, traffic will disperse as needed. I do worry about Harrison and Adams, as it appears they will remain largely the same--designed to accommodate large numbers of vehicles entering and exiting the city via the soon-to-be former I-81 viaduct. If there is traffic congestion, then that points out the need for better public transit. The proposed Centro BRT lines would be a great place to move forward with that.

I think there should be stoplights and crosswalks at Monroe Street and Madison Street. Walking should be easy and safe. Just because there are no longer connecting streets on the west side of Almond for those two streets doesn't mean walkers who want to cross there should have to walk a block out of their way in order to do so safely.

The very first thing I noticed when I saw the plan for the Community Grid was the roundabout at MLK East. I am a proponent of roundabouts, but not this one. It is too close to Dr. King School. While it's definitely an improvement to be rid of the I-81 viaduct, with its noise and asthma-inducing pollutants, BL 81 is still going to be a much bigger street than what is there now. Right now it's just neighborhood streets, safe for children and others to navigate on foot, including walking to and from school. If you slow down traffic earlier by moving the roundabout further south, you could have an intersection at MLK East. People walking would be able to cross MLK East safely, and the sidewalk on the south side of the street could be retained. The roundabout, with no accommodations for people walking, would be quite unsafe. If that were your child's school, would you want that roundabout there? I know I wouldn't.

I support the proposal to move the roundabout back to Colvin Street. Of course, it needs to be designed to safely support those who walk and bike on Colvin. There's actually the possibility to make it much safer than it is now at the entrance to the ramp and under the bridge. The roundabout would also mean there would be no need for the existing on ramp or the proposed off ramp at Colvin. It also opens up the possibility of reopening the old gate to Oakwood Cemetery.

As I ride my bike a lot in the city, I am very happy to see all of the protected bike lanes and shared-

use paths in the plan. I am disappointed that the expectation when a person riding a bike needs to cross the street is to dismount and cross with the walkers. (I was told that by the planner who designed the bike and shared-use paths.) Examples: crossing Almond St. at Van Buren St.; crossing Almond St. at Adams St. to get from the shared use path on the west side of the street to the northbound bike path on the east side of the street; any intersection where you need to turn across Almond St. to go on a cross street (such as, while riding northbound on the shared-use path, turning right at Taylor St.). Somehow, other cities have figured out how to design intersections that work for people riding bikes as well as people driving cars. This kind of treatment discourages bike riding, and some will just ride in the car lanes so they can turn while riding.

At the southern interchange, I understand that there will be bicycle and pedestrian accommodations on the new Brighton Avenue bridge. Even more pertinent to my concerns, and even though it doesn't show this on any of the plans I saw, I was told by a NYSDOT person that there will be bicycle and pedestrian accommodations on the new E Glen Ave. connecting from Brighton Ave. across the new interchange at BL 81 to the connection at Loretto. This is really important, as it's how I--and other people on bikes--get from the Valley to the Comstock neighborhood and beyond. Right now, on the old E Glen Ave., it's pretty straightforward. The new E Glen Ave. looks bigger and more complicated, including slip lanes. And I understand there will be much more traffic on it. So a design for bike and pedestrian safety is a must.

I also want to express my support for the community's demands as amplified by comments from the CNY-NYCLU and Urban Jobs Task Force.

Thank you,

Kathryn Downing

Comment on I-81 Viaduct Project DDR/DEIS

Kathryn S. Downing <ksimmonsd@gmail.com>

Tue 10/12/2021 11:54 PM

To: dot.sm.mo.I81Opportunities <dot.sm.mo.I81Opportunities@dot.ny.gov>

ATTENTION: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

To the Project Team:

I previously sent a comment expressing my support for the Community Grid, and also expressing my concern for the proposed roundabout right behind Dr. King School. I'm glad to see that my concerns along with the concerns of many others have been heard, and you are considering moving the roundabout.

I think it would be problematic to move the roundabout "north of Van Buren Street," as Syracuse.com reported one of the options to be. Because you are using the roundabout to slow down the traffic speed, that would mean it would still be fast-moving behind Dr. King School. (I presume the roadway would be at ground level by that point because of the restrictions of the railway tracks.) The traffic speed would be a danger to the neighborhood, to people who walk and ride bikes--including children walking to school. Also, I presume that would mean there would be no connecting intersection between MLK East and BL 81, with traffic still moving fast.

I'm also concerned about the effects that putting the roundabout near or at Van Buren Street will have at that point. To me, it seems like traffic needs to be slowed down before Van Buren because of that street's nature and uses. Also, how will this affect the planned shared use paths for people who ride bikes and walk? And their ability to cross BL 81/Almond Street and Van Buren Street?

The other alternative for the roundabout as reported by Syracuse.com was the Kennedy Street intersection. I would prefer that location. You could have an intersection with MLK East and Almond Street, as the traffic speed at that point would have been reduced to acceptable levels for the neighborhood. And it would also mean Kennedy Street would be connected. Right now that Kennedy Street & Leon Street corner is very quiet, so I don't know how the folks living there will feel about the roundabout being placed there. And I think any concerns they have should definitely be considered and addressed.

Regarding any concern about traffic speeding up after slowing down at Kennedy: The parallel streets--Leon, Oakwood, and State--all have the same stretch between Kennedy and MLK East that Almond Street would have, and the traffic speeds on all of them are reasonably slow. So, designed appropriately, traffic speed on Almond Street between Kennedy and MLK East can remain reasonably slow.

I still think a roundabout at Colvin Street is a better option than any others proposed. I know there is a long stretch between Colvin and, say, Kennedy or MLK East. Maybe a couple of those little streets jutting east from Garfield Avenue that look like they were connected to whatever street preceded the building of I-81, such as Elizabeth Street, Garfield Place, Glass Terrace, and Woodland Avenue, could intersect with the new Almond Street.

I support the proposal to move the roundabout back to Colvin Street because it's already a mess at the intersection where Colvin crosses under I-81 and where the on ramp is. And the people who live nearby currently have no choice but to put up with it. Having the roundabout there would actually improve things. There would be no more on ramp, nor any need for the proposed off ramp. If designed well, it could actually improve the safety and comfort for walkers and bike riders, as well as motor vehicle drivers.

Thank you,

Kathryn S. Downing

Subject: Tear Down the Structural Racism of I-81

Dear

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Carol Driscoll

Subject: A New Viaduct Will Not Get us Closer To Consensus

ATTENTION: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

Greetings Mr Frechette,
I would like to submit this letter, which was printed in Syracuse papers, and Syracuse.com. I wanted to submit it officially as well, for DOT's records of submission.
- Joe Driscoll

I am very disappointed to read Assemblyman Magnarelli's opinion piece "CNY is far from consensus on I-81". While it is indeed true there is not yet a unanimous consensus on the future of 81, could it be that one group is just closing their ears in this conversation? Repeatedly we hear 'our concerns are not being heard'. although we've had dozens of community forums going back a decade now. Like a child who wants ice cream for dinner, they are claiming no one is listening to their requests, and there is no consensus. The truth is, your views have been heard and addressed, but after extensive discussion, you are not getting everything you want. There is a massive difference between not being heard, and not getting what you want.

I would note the major stakeholders who have voiced their support for the Grid: Syracuse's Mayor, the Common Council, 4 of our 5 State representatives (Assemblyman Magnarelli being the lone holdout), the NY Governor, 2 of our 3 Federal Representatives (Congressman Katko being the lone holdout), President Biden, Federal Transportation Chair Buttigieg, Syracuse University, the lead tenant representative for Syracuse Housing Authority (representing those living closest), and most importantly the State DOT traffic engineers and experts who are the most qualified, and are ultimately responsible for making this decision. If it is true there is no consensus, it is only because a few folks refuse to recognize the overwhelming tides of support, the expert opinions and recommendations, and are stubbornly trying to hold back progress and change.

Assemblyman Magnarelli's vision of finding consensus by building a community grid which includes a new viaduct or bridge, wildly misses the point entirely. What we currently have is a grid with an elevated viaduct, and it has led to the creation of a neighborhood with the second highest rates of asthma and heart disease in the state, and some of the highest levels of racial and economic segregation in the country. I'm not so naive as to think bringing this viaduct to grade will magically erase all these problems, but I am confident that building the viaduct back even larger and wider will not in any way be an improvement on the quality of

life for Syracuse's citizens. The Assemblyman does raise some very valid concerns regarding housing and quality of life for those living closest to the viaduct. What I don't grasp is how a new larger, wider viaduct would in any way address any of those concerns. The current viaduct is at the end of its life, and at least five years of horrible disruptive construction is coming, regardless of which option we go with. The grid is not only the least expensive option, it is also the option with the shortest construction time. The current viaduct needs to come down, and the concern about what happens regarding housing and gentrification remain the same, whichever option is chosen. The option least disruptive to these communities is the grid. So how would adding a few extra years of construction to build a new viaduct change the dynamics regarding gentrification?

The economic and physical health of the city of Syracuse has suffered tremendous negative impacts for decades due to this viaduct. The property adjacent to these viaducts is valued at 1/10th of the value of the rest of the surrounding property in the city. To suggest that we should continue to sacrifice the economic health of our urban core, and the physical health of our citizen, in order to bolster a failing business (Destiny USA) that is currently unable to pay its bills, in a dying business model, projected by most savvy economists to be a dead industry within five years, is short sighted and myopic at best. We are done sacrificing the health of our city and its citizens in order to avoid a 1.3% loss of hotel bookings in Salina, or a 2.8% loss of Destiny shoppers. While we cannot turn back time to restore the homes and properties destroyed during the initial construction of I-81, surely seizing more land through eminent domain to make the viaduct wider and larger, increasing the disconnection of neighborhoods, and further reducing the city's tax base, is certainly moving us in the wrong direction.

I can confidently say, as an advocate for the removal of the viaduct, and one who has been working constantly with other advocates for its removal for years; a grid that includes a new larger, wider viaduct (as Assemblyman Magnarelli suggests) would not get us any closer to 'consensus'. For those of us supporting the grid, the removal of the viaduct is an essential aspect of that advocacy, in the hope of reintegrating a community. That is the point. We have a once in a generation shot at reimagining our incredibly poorly designed urban center, and while it is uncertain that bringing the viaduct to grade by itself will move the needle closer to equity, I feel confident adding a larger, wider viaduct, would only be doubling down on the horrendous mistakes we have made in the past.

Assemblyman Magnarelli and Congressman Katko both say they will do whatever they can to facilitate the project once an option has been selected. I'd note again- we've heard from the Mayor, Council, majority of State & Federal reps, the Governor, President Biden, Transportation Chair Buttigeig, the representatives for SHA, and most importantly, the State DOT. Shovels go in the ground next year, according to the State. The time to advocate and do 'whatever we can' to ensure the success of this project is right now. At what point will we see representatives Magnarelli and Katko do 'whatever they can'? After the construction begins, it will be too late.

- Joe Driscoll

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.

● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

ATTENTION: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

I briefly attended the Camillus open house last night. My curiosity was how the new configuration would affect travel time of emergency or private vehicles to the Upstate Hospital emergency room from Camillus. It appears that travel times will be longer if by 690 to the new interchange east of present 81 and the same if by 690 to West Street to Adams which is the backup route now if congestion is slowing traffic at the interchange. The longer travel time could be fixed by maintaining the current Harrison-Adams exit ramp down to street level and establishing an express lane to Adams. If you are going to spend this kind of money things should be getting better rather than worse. I'm still not sure how you are going to improve congestion coming from the north to Dome events . Thankfully I have not yet had to access the hospital during backups from Dome events.

I was also wondering if a traditional benefit/cost analysis had been done which takes into account the extra time and expense of thru traffic traveling a longer route to get around Syracuse than currently is the case.

Thank you

Hannah Brazil

However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Thomas Duggan

Subject: Tear Down the Structural Racism of I-81

Dear

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Earl Dunbar

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.

● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal "SEP 14" local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also

provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Howard Edelman

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.

● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal "SEP 14" local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.

● Apply for the federal "SEP 14" local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

William Elkins

To Whom This May Concern:

Multiple thoughts on the future of I81 in Syracuse:

- The original construction of I81 through the heart of Syracuse 50 years ago was a mistake. Whether it was intentionally done to eliminate the existing neighborhood or not, the negative effect of that decision on the City of Syracuse has been substantial and long-running. It is true that the damage caused by that decision cannot be reversed, but the Grid solution can help begin to knit together the fabric of the City.

- The existing highway contributes substantial amounts of noise and pollution for many blocks on each side of the corridor. It is well known that residents of Pioneer Homes, adjacent to the Adams Street on- and off-ramps suffer a higher incidence of asthma and other breathing problems than found in the rest of the population. My wife and I live 1 ½ blocks from the I81/I690 interchange, and can attest to the level of noise, day and night, and the general sense of "wasteland" beneath the viaducts.

- We understand that approximately 12% - 15% of traffic using the current viaduct within the City is passing through. The rest of the traffic is entering or exiting I81 within the City. Two thoughts occur: 1). the 12% - 15% passing through would approximate the only traffic added to what is now I481, and 2). the other 85% - 88% are currently using the limited access points. From our apartment window, we see the daily commuter backup waiting to exit onto Adams Street. The Grid solution adds substantially more access points, which should serve to lessen commute-time back-ups (perhaps even S.U. game-day delays). Many in opposition to the Grid have argued that the City streets will be over run with traffic, and will not be able to handle the "additional" loads. We argue that the City is already handling the existing traffic with fewer exit/access points, so the addition of more options should spread the traffic more effectively.

- We understand that there has been considerable agitation from the owners of DestinyUSA. While no one wishes any business ill will, it is becoming clear that enclosed malls are rapidly falling out of favor. The Mall is currently unable to pay it's taxes, and it is clearly just a matter of time before this Mall will be shuttered (ten years?, five years?). So, basing any decisions for the future of I81 on this short-term need doesn't seem appropriate.

- It seems that now is the time plan for the next 50 years of development in Syracuse. With the current push for downtown housing, there seems to be a substantial push toward unifying downtown with the University/Hospitals hill. An elevated highway through the edge of our downtown density is currently a barrier to this movement.

- Just in the last few years, substantial portions of Downtown have witnessed a renaissance toward a more livable, walkable, bikeable environment. A major obstacle to continuing this movement is the existing viaduct.

I am a retired architect and we are new downtown "transplants". I have been to all but the last of the community meetings at the Convention Center, and have been very impressed with the amount, and

quality, of work that has been done by NYS DOT during the past decade.

The Grid option is the obvious choice for the future of our City.

To: David Smith <i81opportunities@dot.ny.gov>

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

ATTENTION: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

Regarding the destruction of an entire county with a “community grid”:

Why destroy currently successful communities (Dewitt, Cicero) and detriment businesses (hotels and restaurants along 7th North Street, Destiny mall) that depend on 81’s existence for the possible betterment of a very small portion of Syracuse? Look at the project as a whole, look outward from the city of Syracuse to the surrounding areas. Rerouting interstate traffic on 481 will devalue Cicero and Dewitt housing - and will it really improve the lives of those living near 81 in the city? Planting a few pretty trees and removing the highway will surely not raise the economic realities of those established residents. Jobs and education will – not the removal of a highway. Meanwhile, you’ve blighted all of Onondaga county. City blight is already moving outward from the city – to areas near Lemoyne College, to the East Syracuse village and Eastwood and Northside areas – these areas are unlivable already. Further destabilizing sensitive areas such as Dewitt and Cicero will surely be the nail in the coffin for these suburbs and all of Onondaga County.

While the optics of the community grid are admirable, perhaps simply replacing 81 as it is and using part of the money to relocate affected families may be another option.

If the community grid does get approved, I hope that sound barriers for the **entire** length of 481 will be installed. The roar from traffic on 481 is already unreasonable in the Franklin Park area of East Syracuse – and being wedged on the north by the Thruway already creates an undesirable neighborhood (not to mention the crumbling Carrier, Syracuse China, GM, and New Venture Gear plants – Syracuse is simply an ugly, hopeless place to live – don’t make it worse by concentrating traffic in the county’s outskirts.)

Living in CNY/Syracuse is already a hard sell to many families due to the winter weather, lack of jobs, spreading blight, and crime. Those of us nearing retirement are already thinking about whether we want to make CNY our home going forward, and placing two highways worth of traffic onto one will surely cause noise, pollution, traffic snarls (ever travel 690 east and try to merge onto 481 south at rush hour? It’s already a race track – adding another lane is a laughable exercise) and will not improve the city by a measurable means. The addition of the two Amazon warehouses has already caused increased truck traffic. Going forward there is simply no reason for anyone with means to stay in CNY. I think you’ll see an exodus of reliable tax dollars, as good families relocate, leaving Syracuse to Utica’s fate.

This whole project is an experimental one, and one that will probably prove to fail – blighting an entire county. Please rethink the farce of the community grid and replace 81 as it is.

As local famers and vendors at the Central New York Regional Market, the undersigned have reviewed and considered the DEIS posted by the NYS DOT. The "Community Grid" option, as outlined in the report presents several significant challenges to the farming community. These challenges include:

- Delivery trucks supplying produce to the many warehouses and distribution centers near New York City and Philadelphia will be forced to take a longer route east on the NYS Thruway to 481 and then to I-81. This adds several miles, minutes, and expense to an already long delivery route.

- Local produce delivery trucks from the Central New York Regional Market and other nearby produce wholesalers that are delivering to restaurants, grocery stores and other vendors within the Central New York region will have the same difficulties. Also, without I-81 the daily delivery trucks, which often have several stops along their daily route will face added minutes and miles if a section of I-81 is eliminated and we are forced to use the grid route.

- To reach the Central New York Regional Market, farmers, vendors, and customers from points south will either need to take a circuitous route to the Market using 481, the NYS Thruway, or use the grid route, which will add several miles and minutes to reach their destination.

The Grid Only option makes access to and deliveries from the Central New York Regional Market more difficult and expensive and will hurt the agricultural economy. New York farmers already suffer from labor shortages, significant regulation by local, state, and federal governments, high taxes, and unpredictable weather. The Grid Only option will make it even more difficult for farms and agricultural business to survive.

In the last USDA five-year agricultural census of 2017, New York State lost over 2,000 of its 35,000 farms. This loss was triple the national average. The loss of I-81 in Syracuse will only add to the decline of New York farms.

Also, without I-81 the daily delivery trucks, which often have several stops along their daily route will face added minutes and miles if a section of I-81 is eliminated and we are forced to use the grid route.

- To reach the Central New York Regional Market, farmers, vendors, and customers from points south will either need to take a circuitous route to the Market using 481, the NYS Thruway, or use the grid route, which will add several miles and minutes to reach their destination.

The Grid Only option makes access to and deliveries from the Central New York Regional Market more difficult and expensive and will hurt the agricultural economy. New York farmers already suffer from labor shortages, significant regulation by local, state, and federal governments, high taxes, and unpredictable weather. The Grid Only option will make it even more difficult for farms and agricultural business to survive.

In the last USDA five-year agricultural census of 2017, New York State lost over 2,000 of its 35,000 farms. This loss was triple the national average. The loss of I-81 in Syracuse will only add to the decline of New York farms.

Dear Mark and Rick:

I am writing to express my concerns with the announcement of the Community Grid as the Department of Transportations preferred option. I am currently employed at the Homewood Suites Hotel, which is located directly off I-81 at exit 25.

I am worried that re-routing I-81 to the current 481 will cause my employer to lose business or close. My schedule and hours are always made based on hotel needs and availability. If the hotel isn't busy enough I could lose hours, ultimately affecting my income.

Everyday our hotel sells anywhere from 5-30 or more additional rooms on the day of arrival. This means guests who did not have a reservation for a particular date, make their reservation on the day they plan to arrive. Some people walk-in to the hotel without a reservation and book a room to stay. Please do not assume that "today's travelers" have planned ahead and know where and when they are staying because of the advancements we've seen in technology. Yes, technology has helped people have unlimited booking options; however, plans change and some people travel alone and cannot safety utilize the technology to make room reservations for themselves while driving. The assumption being made that same day reservations and walk-ins no longer happen in this industry is not based on fact and can have a detrimental effect on my job and income. It is clear and obvious that whomever believes this assumption did not consult with anyone in the hotel industry, especially the hotels located off I-81 in the Town of Salina. Walk-in hotel business and same day reservations (typically made based on location alone) are certainly not a thing of the past and continue to happen daily at hotels all across America. If my hotel were to lose these 5-30 reservations per day because we are no longer located of I-81 it could cost me my job or the jobs of my co-workers. Additionally, it is important to note a large majority of our reservations – in advance or same day of arrival bookings – are made based on our easily accessible location. Most hotels are built next to freeways and Interstate highways for a reason... people want easy access to their travel routes regardless of traveling for business, leisure, passerby, etc.

I implore you conduct more fact based research on how much revenue would be lost from the travel based industry businesses located off I-81, including hotels, gas stations, restaurants and fast food establishments. The Draft Environmental Impact Statement suggests it would only be 1% decline in business. As a person dealing directly with the guests who choose to stay at our hotel because we're right off I-81, I can assure you it's not merely 1%!

Thank you in advance for your consideration.

Sincerely,

Anthony Emmi

Mark,

I left you a voicemail last week.

The 14 hotels, in the Town of Salina/adjacent to I-81, have been communicating regularly regarding the future of our businesses. The main question that arises during every meeting is – how did the NYSDOT calculate that our business loss would only be 1.3% if 81 is moved to 481?

Are you willing to share every detail of the study that shows the 1.3% loss?

Secondly, the group is willing to meet in person to discuss how you calculated the loss. To date, none of these hotel managers have been contacted by the NYSDOT.

Please advise.

**I copied the 81 opportunities website and would like this to be included in the official comments.

Thank you,

Dear Mark and Rick:

I am writing to express my concerns with the announcement of the Community Grid as the Department of Transportations preferred option. I am currently employed at the Tru by Hilton Syracuse North Airport Area, which is located directly off I-81 at exit 25.

I am worried that re-routing I-81 to the current 481 will cause my employer to lose business or close. My schedule and hours are always made based on hotel needs and availability. If the hotel isn't busy enough I could lose hours, ultimately affecting my income.

Everyday our hotel sells anywhere from 5-30 or more additional rooms on the day of arrival. This means guests who did not have a reservation for a particular date, make their reservation on the day they plan to arrive. Some people walk-in to the hotel without a reservation and book a room to stay. Please do not assume that "today's travelers" have planned ahead and know where and when they are staying because of the advancements we've seen in technology. Yes, technology has helped people have unlimited booking options; however, plans change and some people travel alone and cannot safety utilize the technology to make room reservations for themselves while driving. The assumption being made that same day reservations and walk-ins no longer happen in this industry is not based on fact and can have a detrimental effect on my job and income. It is clear and obvious that whomever believes this assumption did not consult with anyone in the hotel industry, especially the hotels located off I-81 in the Town of Salina. Walk-in hotel business and same day reservations (typically made based on location alone) are certainly not a thing of the past and continue to happen daily at hotels all across America. If my hotel were to lose these 5-30 reservations per day because we are no longer located of I-81 it could cost me my job or the jobs of my co-workers. Additionally, it is important to note a large majority of our reservations – in advance or same day of arrival bookings – are made based on our easily accessible location. Most hotels are built next to freeways and Interstate highways for a reason... people want easy access to their travel routes regardless of traveling for business, leisure, passerby, etc.

I implore you conduct more fact based research on how much revenue would be lost from the travel based industry businesses located off I-81, including hotels, gas stations, restaurants and fast food establishments. The Draft Environmental Impact Statement suggests it would only be 1% decline in business. As a person dealing directly with the guests who choose to stay at our hotel because we're right off I-81, I can assure you it's not merely 1%!

Thank you in advance for your consideration.

Sincerely,

Ross M. Emmi
Partner
Tru by Hilton Syracuse North Airport Area

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.

● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Rebecca Endres

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

- Oppose gentrification and displacement in any form. Oppose repeating the displacement of predominantly black residents that started when I-81 was built.
- Create a community land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
- Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

- Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
- Conduct a community health needs assessment.
- Do not use Wilson Park as a staging site for construction or construction materials.

● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal "SEP 14" local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Dana Esposito

Sharon Millhouse

Subject: Tear Down the Structural Racism of I-81

Dear

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.

Jason Evans <rethinksyracuse@gmail.com>

Thu 10/14/2021 4:30 PM

To: dot.sm.mo.I81Opportunities <dot.sm.mo.I81Opportunities@dot.ny.gov>

ATTENTION: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

To the I-81 project team:

I would like to express my strong support for the Community Grid solution as the replacement for the aging I-81 viaduct.

As a former Syracuse University student, longtime city resident, and downtown employee, I've crossed under the viaduct an immeasurable amount of times on foot, bicycle, and car. As an architect and designer, I have a constant drive to improve the world around me and to maximize potential found within opportunities. To that end, I would like to share some thoughts and considerations that may improve the project outcome and user experience, primarily focused on the downtown-adjacent portions of the project.

The existing viaduct right of way to the east and north of downtown is significant. Although the large footprint of state-controlled land allows for some comfort and ease with design of the community grid streets, I would like to encourage the project designers to minimize the widths of the streets and new rights-of-way as much as possible. The current design of the new Almond Street appears to be excessively wide, filling much of the available right-of-way – this width is intimidating to pedestrians and cyclists and poses the risk of exchanging a current barrier between neighborhoods (the viaduct) with a new type of barrier.

If the width of Almond Street is able to be reduced in a meaningful and significant-enough way, a substantial amount of the former right-of-way may be returned to local control for purposes of redevelopment. If this land is properly managed and redistributed through an RFP process or other method that prioritizes "good" development and place-making (much like the Rochester Inner Loop lands, for example), the new Almond Street will have incredible potential to reactivate neighborhoods and heal a divide, rather than simply connecting points A to B.

On a related, although much more minor, note, I wonder if Harrison Street can be realigned on both sides of Almond Street. There is a jog in the street northward that originally accommodated an offramp to the west and large amounts of University Hill traffic entering the highway from the east. With the elimination of the viaduct and the introduction of the new Crouse/Irving interchange, there is opportunity to realign Harrison Street with the rest of its length.

On the west side of downtown, the reimagining of the West Street interchange and reconnection to Genesee Street are very exciting improvements. I am highly supportive of this direction. That it enables an extension to the Creekwalk is also very positive. In reviewing the proposed Creekwalk extension routing, I would like to make one recommendation as someone who uses the existing trail on a somewhat regular basis: At the north end of the proposed pathway, rather than a series of switchbacks up to Evans Street, the route should instead bridge the creek and lower Creekwalk to connect to the greenspace and 'circle' just to the north. Evans Street provides vehicular access to a nearby garage, but is otherwise not a route on which cyclists or

pedestrians would travel. Connecting the new Creekwalk extension to the existing trail would ensure that it is activated; if the north terminus remains as designed, I fear that it would be too far removed and end up a scarcely-utilized amenity.

Lastly, with the dramatic improvements to the northern end of West Street, I would encourage the project to study the entire length of the West Street corridor as part of the overall Community Grid network. The length to the south of the current project boundary is incredibly oversized in both capacity and scale, and is almost a more inhospitable environment to all modes of travel than the viaduct area. In a broad sense, I would think the current south-bound travel lanes could be eliminated, with the north-bound and service road portions reassigned as the new south-bound and north-bound respectively. This reduces the with closer to the original street alignment, and may enable both plantings and return of land for productive local uses. Of course, improvements of this scale impact a lot more than the immediate street itself, but I feel the benefits may be substantial.

Many thanks to the team that has progressed the project to this point – the Community Grid has exciting potential to continue the positive trajectory of our community and region.

Jason Evans

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.

● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal "SEP 14" local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

teresa evans

Subject: Tear Down the Structural Racism of I-81

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.

● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Wendy Fast

Subject: Tear Down the Structural Racism of I-81

Dear

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

Mark Frechette, P.E.
Project Director
New York State Department of Transportation, Region 3
333 East Washington Street
Syracuse, NY 13202

Rick Marquis
Division Administrator
Federal Highway Administration
Leo W. O'Brien Federal Building
11A Clinton Avenue, Suite 719
Albany, NY 12207

Dear Mark and Rick:

I am writing to express my concerns with the announcement of the Community Grid as the Department of Transportations preferred option. I am currently employed at the Homewood Suites by Hilton Syracuse-Liverpool, which is located directly off I-81 at exit 25.

I am worried that re-routing I-81 to the current 481 will cause my employer to lose business or close. My schedule and hours are always made based on hotel needs and availability. If the hotel isn't busy enough I could lose hours, ultimately affecting my income.

Everyday our hotel sells anywhere from 5-30 or more additional rooms on the day of arrival. This means guests who did not have a reservation for a particular date, make their reservation on the day they plan to arrive. Some people walk-in to the hotel without a reservation and book a room to stay. Please do not assume that "today's travelers" have planned ahead and know where and when they are staying because of the advancements we've seen in technology. Yes, technology has helped people have unlimited booking options; however, plans change and some people travel alone and cannot safety utilize the technology to make room reservations for themselves while driving. The assumption being made that same day reservations and walk-ins no longer happen in this industry is not based on fact and can have a detrimental effect on my job and income. It is clear and obvious that whomever believes this assumption did not consult with anyone in the hotel industry, especially the hotels located off I-81 in the Town of Salina. Walk-in hotel business and same day reservations (typically made based on location alone) are certainly not a thing of the past and continue to happen daily at hotels all across America. If my hotel were to lose these 5-30 reservations per day because we are no longer located of I-81 it could cost me my job or the jobs of my co-workers. Additionally, it is important to note a large majority of our reservations – in advance or same day of arrival bookings – are made based on our easily accessible location. Most hotels are built next to freeways and Interstate highways for a reason... people want easy access to their travel routes regardless of traveling for business, leisure, passerby, etc.

I implore you conduct more fact based research on how much revenue would be lost from the travel based industry businesses located off I-81, including hotels, gas stations, restaurants and fast food establishments. The Draft Environmental Impact Statement suggests it would only be 1% decline in business. As a person dealing directly with the guests who choose to stay at our hotel because we're right off I-81, I can assure you it's not merely 1%!

Thank you in advance for your consideration.

Sincerely,

Joshua Febres
Houseperson
Homewood Suites Syracuse Liverpool

ATTENTION: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that still persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. However, the plan ignores the history and the current needs of the environmental justice community that lives adjacent to the viaduct that will be demolished.

It doesn't have to be this way. The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should reflect the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use
● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Conduct a new analysis of land use that adequately considers the trends of the environmental justice community that lives adjacent to the raised viaduct.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth
● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction.
● Create a Community Restoration Fund.

● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity
● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent to Black and Brown Syracuse residents.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children
● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, defined as one used by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that still persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. However, the plan ignores the history and the current needs of the environmental justice community that lives adjacent to the viaduct that will be demolished.

It doesn't have to be this way. The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should reflect the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use
● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Conduct a new analysis of land use that adequately considers the trends of the environmental justice community that lives adjacent to the raised viaduct.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth
● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent to Black and Brown Syracuse residents.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children
● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, defined as one used by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

August Fegley

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.

● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal "SEP 14" local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.

● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal "SEP 14" local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Joseph Ferraro

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

ATTENTION: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

As the I-81 construction project continues to move forward, I urge you to drive 481 south at about 5 PM on a weekday and try to get off at the Fayetteville or DeWitt exits. As traffic flows from 690 into 481 it is nearly impossible to make those lane changes. And with an increase in traffic, I can only imagine it getting worse. My suggestions would be a bypass lane for those on 481 and lowering the speed limit to 55 in this stretch.

Thank you
Michael Ferris

To: Mark Frechette, P.E.

My name is Andrea Filipkowski, my family and I have lived in Town of Salina for nearly 15 years. My husband is a Deputy Sheriff for Onondaga County and I am a stay at home mom. My time mostly consists of taking our son to and from many sports related activities throughout this area.

Over the 15 years of being a resident of this area, it has become overlooked and run down. We would like the new 81 project to include the Liverpool bypass. This is a main gateway to the Town of Salina. Development is happening and now is the time to fix the issues at hand. The area has become messy and dangerous. We are hoping this will be cleaned up and make it more efficient.

Sincerely,

Andrea Filipkowski

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

James Finnigan

RE: I-81 Viaduct Project Draft Environmental Impact Statement

Dear Mr. Frechette,

I am in full support of the I 81 Community Grid Alternative that has been outlined and presented to the public. The social, economic, and environmental effects of the project when implemented will be overwhelmingly positive for the City of Syracuse and its inhabitants

I am concerned about the potential unintended consequences to Finger Lakes' roads, villages, and towns west of the project. Has NY State considered the impact of increased traffic flow during and after actual construction in these communities?

There are NY City garbage trucks and some number of long-haul trucks (for example, Maersk) that already find it quicker to get from Binghamton as they travel north on I81 to points west—Seneca Falls, Rochester, and Buffalo—by jumping off I 81 far south of Syracuse and coming up roads along Skaneateles, Owasco, Cayuga, and Seneca Lakes. (And likewise heading south on these roads to get to catch I 81 north of Binghamton.)

All traffic (trucks and cars) with a western destination using GPS naturally will be directed to travel up and down these lake roads, which were not designed for heavy traffic, not to speak of the obvious increased safety and environmental risks associated with this type of traffic on the lake roads. This will happen during construction and afterwards when traffic would otherwise be directed northeast around Syracuse to pick up 690 or the Thruway to go ultimately west.

Someone at the state-level must be considering this serious matter. It would be helpful to see what is planned and, if nothing is yet planned, when and how these considerations will be addressed.

Thank you for reading and responding to my letter.

I would be glad to discuss if there is a way that I can be helpful on this matter.

Sincerely,

Daniel J. Fisher

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and at least 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal "SEP 14" local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.

● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.
Sincerely,
Michael Fixler

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Michael Fixler

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.

● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal "SEP 14" local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Lucien Fontaine

● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.

● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal "SEP 14" local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

William Forrest

Subject: Tear Down the Structural Racism of I-81

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Tess Fraad

Subject: Tear Down the Structural Racism of I-81

Dear

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.

● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Faith Freewoman

Sharon Millhouse

Subject: Tear Down the Structural Racism of I-81

Dear

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.

Dear Planners:
As a faculty member in the Landscape Architecture Department at SUNY College of Environmental Science and Forestry, historian, and neighbor and steward to Oakwood Cemetery, I would like to advocate for restoring access to Oakwood Cemetery's main entrance gate, currently severed from the city by Interstate 81. A redesign of I-81 to a slower, lower-volume road, would minimize noise and visual pollution in Oakwood Cemetery generated by the highway. However, the current community-grid design alternative has the potential to increase noise pollution in the cemetery as trucks and cars brake upon approach to the proposed traffic circle. To mitigate this, extending Almond Street's traffic calming beyond where it is currently proposed to either Colvin or Brighton Avenue, would be beneficial and inclusive of Oakwood Cemetery. If a non-community grid alternative is chosen, it is our hope that access and environmental and cultural impacts to this federally and locally protected site be considered and addressed.

Oakwood Cemetery is a major resource; historically, culturally, locality wise, as well as vital public green space. It is used daily by students and faculty from both Syracuse University and SUNY ESF, as well as residents of the east-side adjacent neighborhoods. A connection to the southside and downtown through the historic main entrance gate provides an unmatched opportunity to reconnect the city through a pedestrian safe and serene park-like setting, as it was originally designed and utilized for decades. It is an opportunity to right the environmental injustice that occurred through the original construction of I-81 which devasted and inequitably separated the southside community from the rest of the city.

This connection would also provide new activity leading to renewal and revitalization in the most historic sections of the cemetery which, is in itself a major asset to the city of Syracuse. Currently these sections are out of sight to most, having been left to demolition by neglect, vandalism, and considered dangerous.

It is important to note that Oakwood Cemetery's current administration (non-for profit) does not have an interest in restoring access to Oakwood's historic main entrance gate. However, our ask is that I-81 be designed so that future administrations could if they chose. This is a once in a lifetime opportunity to holistically address circulation, environmental justice, reweaving the urban fabric, and so much more in Historic Syracuse, while celebrating the creativity of the rural cemetery movement of the 19th century.

I urge you to consider righting this wrong and restoring access to Oakwood Cemetery's historic main entrance gate. As it's been said, this is a once in a lifetime opportunity.

Thank you for your time and consideration.

Tearing down Route 81 is the dumbest plan ever.
It will increase travel time, overcrowd the cities streets which are already shot hurt businesses to the north of the city and will NOT solve any of the perceived causes or excuses for hoods and criminals who cry racism.

I urge someone to stop for a minute and think about how stupid
it will be to do this in the name of reinvigorating Sewercuse.

Thank You

● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also

provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Shani Friedman

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.

● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

Mark Frechette, P.E.
Project Director
New York State Department of Transportation, Region 3
333 East Washington Street
Syracuse, NY 13202

Rick Marquis
Division Administrator
Federal Highway Administration
Leo W. O'Brien Federal Building
11A Clinton Avenue, Suite 719
Albany, NY 12207

Dear Mark and Rick:

I am writing to express my concerns with the announcement of the Community Grid as the Department of Transportations preferred option. I am currently employed at the Homewood Suites by Hilton Syracuse-Liverpool, which is located directly off I-81 at exit 25.

I am worried that re-routing I-81 to the current 481 will cause my employer to lose business or close. My schedule and hours are always made based on hotel needs and availability. If the hotel isn't busy enough I could lose hours, ultimately affecting my income.

Everyday our hotel sells anywhere from 5-30 or more additional rooms on the day of arrival. This means guests who did not have a reservation for a particular date, make their reservation on the day they plan to arrive. Some people walk-in to the hotel without a reservation and book a room to stay. Please do not assume that "today's travelers" have planned ahead and know where and when they are staying because of the advancements we've seen in technology. Yes, technology has helped people have unlimited booking options; however, plans change and some people travel alone and cannot safety utilize the technology to make room reservations for themselves while driving. The assumption being made that same day reservations and walk-ins no longer happen in this industry is not based on fact and can have a detrimental effect on my job and income. It is clear and obvious that whomever believes this assumption did not consult with anyone in the hotel industry, especially the hotels located off I-81 in the Town of Salina. Walk-in hotel business and same day reservations (typically made based on location alone) are certainly not a thing of the past and continue to happen daily at hotels all across America. If my hotel were to lose these 5-30 reservations per day because we are no longer located of I-81 it could cost me my job or the jobs of my co-workers. Additionally, it is important to note a large majority of our reservations – in advance or same day of arrival bookings – are made based on our easily accessible location. Most hotels are built next to freeways and Interstate highways for a reason... people want easy access to their travel routes regardless of traveling for business, leisure, passerby, etc.

I implore you conduct more fact based research on how much revenue would be lost from the travel based industry businesses located off I-81, including hotels, gas stations, restaurants and fast food establishments. The Draft Environmental Impact Statement suggests it would only be 1% decline in business. As a person dealing directly with the guests who choose to stay at our hotel because we're right off I-81, I can assure you it's not merely 1%!

Thank you in advance for your consideration.

Sincerely,

Jeysi Fuentes
Housekeeping Supervisor
Homewood Suites Syracuse Liverpool

I am totally for saving81….To tear it down will be a diseaster. The rerouting of this traffic will make the intended highways a nightmare with gridlock.It is better with 81 to have an alternative route when there is construction or an accident. To funnel all highway traffic to outer towns is idiocy. Thank you SAVE81

● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Beth Gabor

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. To the project:

A few observations on comments made during the Virtual Hearing on August 18, 2021, entered for the record:

1. That the DOT made changes to I-481 exit 3 part of the Community Grid alternative shows the DOT does listen to the community.

2. Suspension bridges and cable staid bridges are buit over bodies of water, not busy streets in the middle of cities, and that may be why the DOT never proposed such a thing in the first place. Hopefully the DOT will dismiss this nonsense as quickly as possible.

3. The project has been delayed enough. Ground is supposed to be broken next year. Let's get it done!

To the Project:

With regard to the placement of the proposed roundabout at the corner of MLK, there is a roundabout next to a residential neighborhood in Ithaca, where Spencer St., Albany St., Elmira Rd., and Park St. meet. It could provide a good reference to how safe a roundabout really is or isn't in a residential neighborhood. I've attached a screen shot of the location.

Sincerely,

● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Katie Galuska

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.

● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

John Gant

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also

provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Jen Gantenbein

Mark Frechette, P.E.
Project Director
New York State Department of Transportation, Region 3
333 East Washington Street
Syracuse, NY 13202

Rick Marquis
Division Administrator
Federal Highway Administration
Leo W. O'Brien Federal Building
11A Clinton Avenue, Suite 719
Albany, NY 12207

Dear Mark and Rick:

I am writing to express my concerns with the announcement of the Community Grid as the Department of Transportations preferred option. I am currently employed at the Homewood Suites by Hilton Syracuse-Liverpool, which is located directly off I-81 at exit 25.

I am worried that re-routing I-81 to the current 481 will cause my employer to lose business or close. My schedule and hours are always made based on hotel needs and availability. If the hotel isn't busy enough I could lose hours, ultimately affecting my income.

Everyday our hotel sells anywhere from 5-30 or more additional rooms on the day of arrival. This means guests who did not have a reservation for a particular date, make their reservation on the day they plan to arrive. Some people walk-in to the hotel without a reservation and book a room to stay. Please do not assume that "today's travelers" have planned ahead and know where and when they are staying because of the advancements we've seen in technology. Yes, technology has helped people have unlimited booking options; however, plans change and some people travel alone and cannot safety utilize the technology to make room reservations for themselves while driving. The assumption being made that same day reservations and walk-ins no longer happen in this industry is not based on fact and can have a detrimental effect on my job and income. It is clear and obvious that whomever believes this assumption did not consult with anyone in the hotel industry, especially the hotels located off I-81 in the Town of Salina. Walk-in hotel business and same day reservations (typically made based on location alone) are certainly not a thing of the past and continue to happen daily at hotels all across America. If my hotel were to lose these 5-30 reservations per day because we are no longer located of I-81 it could cost me my job or the jobs of my co-workers. Additionally, it is important to note a large majority of our reservations – in advance or same day of arrival bookings – are made based on our easily accessible location. Most hotels are built next to freeways and Interstate highways for a reason... people want easy access to their travel routes regardless of traveling for business, leisure, passerby, etc.

I implore you conduct more fact based research on how much revenue would be lost from the travel based industry businesses located off I-81, including hotels, gas stations, restaurants and fast food establishments. The Draft Environmental Impact Statement suggests it would only be 1% decline in business. As a person dealing directly with the guests who choose to stay at our hotel because we're right off I-81, I can assure you it's not merely 1%!

Thank you in advance for your consideration.

Sincerely,

Carol Garcia
Houseperson
Homewood Suites Syracuse Liverpool

I am in favor of keeping elevated Rt 81. I would like to see repaired. I am in favor of a creative looking elevated highway. A new look with an honorary name has been mentioned and would certainly be impressive.
The architectural depictions of street level proposal, I believe are not realistic. In newspaper had children frolicking near the road. Couples strolling. And only a few cars! This is a major intersection! Where are the backed up cars, even if for waiting for a red light. And no cigarette butts or litter. And where are the inevitable weeds growing through the cracks of pavement. Not that I like to see this, but unfortunately it is seen all too often. Review depictions of former buildings, (Convention Center omitted the weeds, trash). Yes this can continue even with a newly designed elevated 81. But we should not expect this upbeat proposed plan will heal Syracuse. I look at other intersections. Inevitably there will be neighborhood streets that will become cut through streets and destroy the fabric of that neighborhood.
Other thoughts, close off traffic on Salina Street. Promote a major promenade. At least re route the busses off Salina Street.
Let us not bring down Rt 81 and still be innovative without burdening surrounding communities. The errors of the past, destroying neighborhoods, were horrible. But creating this street level major road will not repair past mistakes.
Regarding rotaries, I previously thought them to really move traffic along. However; recently I drove through a series of roundabouts in another city, during rush hours. The line of cars on each of the approaching arteries were back up by a mile. Would have rather gone through lights than drivers trying to negotiate getting into the correct lanes to enter and exit.
Somewhat different from above, I bicycle and appreciate clean shoulders on roads. Many people bike for more than leisure. Most cyclists bike with respect to traffic laws, which allow them to travel regardless of whether bike lanes exist or not. Much easier to teach safe cycling with consistent rules of the road. Bike lanes are nice, if you are going where they happen to be. (I have not observed much use on the Erie Blvd path. It is really difficult to get on if not starting at certain spots.) I am concerned that getting in and out of the city will become more difficult with larger surrounding intersections.

In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Nora Gerstein

NYSDOT COMMENT - CONSTRUCTION

Comments:
Hello,I am a skateboarder and owner of the Flower Skate Shop in downtown Syracuse. I was looking into the plans for redesigning i-81 and am thrilled about the changes being made and I just wanted to reach out and see if there was any possibility in the redesign to fit a skateable area in. We have a lot of skaters from the area emerging these days which is why we set up our skate shop and I've always wanted to advocate for a bigger skatepark project but I believe the I-81 reconstruction could be a good opportunity for a small and unique spot for skateboarding. I believe that putting skateboarding in a visible area could help people that are passing through to stop and check out our downtown area which could help our local commerce in the long run.If there is anybody that I could reach out to so we could discuss possibilities I would surely appreciate it and look forward to hearing back.Thank you,Charlie Giancolacgiancola33@gmail.comcharlie@flowerskateshop.com315-559-9650@flowerskateshop@_cakeeater

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Linda Glansberg

Subject: Tear Down the Structural Racism of I-81

Dear

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

I'd like to add a personal note. My mother was born in a working class neighborhood in Syracuse almost a century ago, in 1925. By the time I was born, she had moved to Massachusetts, but (like many kids from the Boston area) I moved to NYC when I could, and I've lived most of my adult life in the state. In 2012, I quit my midtown job to get a PhD at Cornell, and I've lived in Ithaca ever since - developing a much more robust sense of this part of the state, and in general of the gulf as well as intimacy between NYS and NYC. This situation hits close to home for me. It's quite wild that, in the "postindustrial" era, this part of the state functions as the northern end of Appalachia, appended to deep blue NYC. Exceptions are the much more diverse populations like formerly great industrial cities like Syracuse, Rochester, and Buffalo. It would do so much for the political culture of NYS if it attended to the needs of these cities and undid some of the material damage of the era of I-81, which would contribute to better politics, IMO, for the state and the city.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Jane Glaubman

● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Richard Glinski

Tear Down the Structural Racism of I-81

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.

● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal "SEP 14" local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Richard Glinski

I-81 Viaduct Project DDR/DEIS Comment

Ms Cheryl L Glor <clglor@esf.edu>

Thu 9/9/2021 10:46 AM

To: dot.sm.mo.I81Opportunities <dot.sm.mo.I81Opportunities@dot.ny.gov>

ATTENTION: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

I am grateful for the chance to voice my opinion on the new Viaduct Alternative. While I do support not having route 81 running through downtown and getting rid of the on/off/on/off ramps situation, I don't think the Viaduct is the way to go. I think it will redirect too much traffic downtown and into the university area, where there is already too much traffic.

I work at ESF and have been going to school there for several years. I absolutely hate trying to get on route 81N from Almond at 5PM, but that is the only time it really is awful. From about 4:30PM to about 5:30PM, M-F, that intersection is terrible. Otherwise, it is just another horrible intersection. in Syracuse (and there are a lot). So, to reroute all of the inner city traffic, add more cars, and move families out of their homes, for traffic that sucks 5 hours a week is anything but good. It honestly seems like a waste of money and time. I am also very worried that it will bring even more traffic to the university area, which already has way too much. I take the bus every day I can because I hate dealing with the traffic. On the days that I do drive, I go down Almond to the back side of ESF and avoid all of the traffic nonsense. Those of us that have been driving here for a while already know the fastest and least congested routes to go where we need to go. If we can't avoid those areas, we know to avoid certain times. For example, I already know to leave campus by 4:15PM or not leave until after 5:30PM. I already have a work around for the awful traffic. Most of us drivers do.

To be completely honest, the traffic in that intersection is the result of having too many on and off ramps too close together and not the inner city traffic. It would be better to build an entire new road encircling the city for those that wish to travel to the other side and not the middle. For example, I enter route 81N on Almond, but immediately have to weave into traffic that wants to get over to route 690. That is the hold up. You have cars and trucks trying to merge left and move right at the same time. It can be avoided by removing either the on ramp or the off ramps to 690. Close those and traffic should clear up rather quickly.

If you would like to clear up city traffic, might I suggest changing the number of traffic lights in the city. There are way too many and they are not well synced. For example, on State Street, there are 8 to travel less than half a mile. If you catch either of the first 2, you will hit all of them and your rage increases. The thing is, most of them don't need to be there. I have been forced to stop at several and have NEVER seen another car trying to get onto State Street. Wouldn't it be easier for the major flow of traffic to flow unimpeded? Removing the unneeded stop lights will reduce road rage, improve driving conditions, and reduce fuel consumption. Then that will improve the air quality in Syracuse. I would even like to suggest adding a yellow "bus only" turn arrow out of the hub. That light is too short for more than a bus or two to get through. At night, it sucks to have to wait for 3 minutes (I timed it.) for the light change to turn left. A flashing yellow bus only arrow would be a great solution, increase efficiency of the buses and decrease pollution.

So, while I think something needs to be done to correct the 81/690 interchanges in the center of Syracuse, I don't think the Viaduct is the way to go. There are other less intrusive options that should be explored first and any solution should NOT have the result of bringing more traffic into an already congested neighborhood.

Urban Jobs Task Force's Recommendations For
Building Equity in the Construction Trades
Based on the Report

Building Equity in the Construction Trades: A Racial Equity Impact Statement

A. Workforce Program Amendments and Modifications

Our qualitative research clearly demonstrates the existence of "social barriers" (obstacles unrelated to a capacity to learn and perform the work) to the completion of pre-apprenticeship and/or employment in the construction trades, particularly:

- Transportation (lack of access to a vehicle and/or insufficient CENTRO bus lines)
- Child care (affordability)
- Need for an income to survive while completing an unpaid
  pre-apprenticeship program
  Transportation barriers prevent qualified residents from reaching apprenticeship / pre-apprenticeship training sites, or reaching work sites (or both).
- The lack of affordable child care for low-income residents makes entry into a good-paying construction trade very difficult for a low-income resident who cannot accumulate the disposable income to afford child care during a job transition.
- The low wages garnered by Syracuse residents, and the unpredictable hours that often accompany such low wage work, create great difficulties in attending daily job training that could last up to twelve weeks.

UJTF's Four (4) Recommendations: Workforce Programs

1. *Shuttle Service.* Public and private workforce development programs outside the city of Syracuse (including those outside Onondaga County) should provide shuttle bus service (or other transportation) at designated city locations to/from the training site.
2. *Reconfigure bus routes.* CENTRO bus lines should be re-designed to align with access to workforce development sites County-wide.
3. *Child Care Subsidy.* Access to a child care subsidy for anyone accepted into a four week or longer workforce training program.
4. *Program Stipend*. Construction trades pre-apprenticeship programs should provide paid training at a living wage for all enrollees, freeing low-wage workers to focus on their training.

B. Immediate Commencement of Serious Construction Trades Training for Syracuse Residents

Local construction trades training for impoverished Syracuse residents has serious shortcomings, particularly:

- Lack of depth in preparation for the higher-skilled construction trades (e.g., electrical, pipefitters, welders, iron workers)
- Insufficient networking opportunities between interested City residents and the construction trades union leadership
- Absence of an effective pathway to union apprenticeships after high school, or to long-term, new construction work opportunities
- Absence of an effective pathway between current, non-union construction trades training and access to the unions that may be a party to a Project Labor Agreement with the New York State Department of Transportation (NYSDOT)

Racial equity is about applying justice and a little bit of common sense to a system that's been out of balance. When a system is out of balance, people of color feel the impacts most acutely, but, to be clear, an imbalanced system makes all of us pay.

Glenn Harris
President, Center for Social Inclusion

UJTF RECOMMENDATIONS | BUILDING EQUITY TOGETHER |
UJTF'S Four (4) Recommendations: Construction Trades Training

1. *Leadership from Departments of Transportation.* NYSDOT and the U.S. DOT should provide $450,000 in construction trades funding specifically for Syracuse residents, not only for I-81, but beyond.
   This request would be consistent with U.S. DOT's recent workforce development grant related to the Colorado Central 70 project, a project that has a budget similar in size to estimates for I-81. Such training should be coordinated with the union trade apprenticeship programs. Such funding should provide access to both (a) union pre-apprenticeship training, and (b) high-skilled union apprenticeship programs: electrician, iron worker, mason, etc.
2. *Direct Pathway to Higher Skills & Work*. Post-secondary, pre- apprenticeship workforce training programs should be coordinated with **both** union apprenticeships and construction developers to create direct pathways for city graduates from pre-apprenticeship programs either to union apprenticeships or construction jobs.
3. *City-based Municipal Hiring Hall*. This tool could greatly benefit developers and contractors when searching for new recruits on a project. This would increase the chances for continuous employment of local residents, and make them aware of new job opportunities.

4. *Leadership from the Offices of Governor Andrew Cuomo, County Executive Ryan McMahon, and Mayor Ben Walsh.* We call upon Governor Andrew Cuomo to make clear to state level and local political representatives and union leaders that the interests of all New Yorkers are best served by construction trades equity in Central New York.
   And that our common interest is served by improving the skills of Syracuse city residents, getting them sufficient work hours on new construction, and reducing the immense burden of highly concentrated poverty upon our families.
   We also call upon County Executive Ryan McMahon and Mayor Ben Walsh to make clear to our diverse communities the importance of equity in the local construction trades, and the urgency of the moment.

UJTF RECOMMENDATIONS | BUILDING EQUITY TOGETHER |

C. Development of a "Big Table" on the Construction Trades

Cleveland, Ohio's "tripartite meetings" overseeing work on the University Hospital, and San Francisco's coordinated efforts around "San Francisco Build" show how a "Big Table" concept can incorporate all relevant "voices" around construction trades training. Big Table meetings in Cleveland and San Francisco tackled on-going challenges in construction workforce training. And their constructive dialogues helped get local residents into the trades and gainfully working.

UJTF calls today for the on-going convening of a "Big Table on the Construction Trades in Syracuse and Central New York." Frequent, regular meetings would develop viable, enforceable plans around:
(a) union-ready, pre-apprenticeship training for city residents
(b) community workforce agreement language for upcoming PLAs (c) community outreach for the identification, and recruitment, of
qualified, local (i.e., Syracuse) workers and potential workers.

UJTF's Two (2) Recommendations: A Big Table on the Construction Trades

1. *Include All Relevant Voices. A Big Table should include trade un*
2. *ion leaders, community workforce developers, employment equity advocates from Syracuse, and relevant, supportive state-level and local political leaders.*
3. *Agreement from All Parties to a Constructive Program.* Convening parties should be committed to producing positive outcomes on employment equity in the construction trades.

An investment in our physical infrastructure is incomplete without a similar investment in our human capital. Anything less is not only economically unsound, it is immoral.
Mark Ridely-Thomas
Los Angeles County Supervisor

"(H)e was assured at that 81 meeting"(?)

What was the "lifetime advocate" assured of?

What were the details of guarantees, if any, were made regarding public housing replacement, interim housing, educational accessibility, employment accessibly, shopping, etc.

Do those guarantees exist? Who has them? Where can they be found to be reviewed, judged and responded to by the community to be impacted?

Is his uninformative, perhaps even uniformed response to be the extent of public and community response and input?

“U.S. Transportation Secretary Pete Buttigieg, said the project could be seen as a kind of reparation for the highway’s original construction, which sliced through a Black neighborhood and business district.” — Terri Weaver

U.S. Rep. John Katko will hold a telephone town hall about the Interstate 81 project in Syracuse at 5:30 p.m. Monday. He’ll take questions from people who listen in.

To attend, sign up online at katko.house.gov/telephone-town-hall.

Some “Reparation” questions that, first, need answers:

What promises have been made, or will be made, to each individual household, and what promises have been or will be made to tenants collectively? What promises have

been made, and agreed to by each of the Syracuse Public Housing tenants who will lose their homes?

What, and who, will assure that these promises are legally binding? What government entity or entities will provide that assurance? Will there be a public record? Who will maintain that record?

What promises and guarantees have been made regarding future rents, location and quality of housing, convenience of housing with respect to schools, health care, shopping convenience with fair prices, adult educational opportunities, employment opportunities, public transportation, law enforcement representative of the community, and community represented adjudication?

What promises have been made regarding costs, quality and convenience and accessibility to educational, shopping, transportation and health care needs, during any period, or periods of transitional housing?

Will Syracuse Public Housing tenants be assured that no action will be taken on “I-81” until these guarantees are in place?

I spoke with my friend Deka Dancil, who was a child living with her mother and siblings in the Kennedy Square Apartments when that complex was demolished and tenants in 409 affordable housing units were pushed out, in 2007. She said it was the nicest apartment she lived in, throughout her whole childhood — Annabelle Hine Otts

Voices by Annabel Hine Otts

https://www.urbancny.com/author/annabel-hine-otts/

"I understand that regardless of the outcome of the I-81 debate, it will not be an option for residents to remain in Pioneer Homes, Central Village, and possibly McKinney Manor. Considering our inadequate public transportation and sprawling city, we must recognize there are few locations with the same proximity to the Centro Transit Hub, hospitals, and downtown offices and businesses, including the social services many rely upon. Moving to a less central location can add a great deal of travel time and complication for the folks who ironically are least likely to use I-81, because many do not have cars. This means less time with family, less time to attend to personal health and well being, and more time out in the elements. I am all for deconcentrating poverty, but worry in this case specifically what it will cost for the poor."

Will Blueprint 15 build a true neighborhood and city “for all”? Let’s Have a Conversation

Posted on **February 26, 2019** in **City Scuffle, Neighborhoods, Voices** by **Annabel Hine Otts**

I'm following the conversations around Blueprint 15 and the partnership between Syracuse Housing Authority, Allyn Family Foundation, and Purpose Built Communities. I would love to see the thriving "neighborhood for all" proponents are aiming for, but am concerned the lives of the most vulnerable will not be improved, only moved.

That said, I'm heartened to see leaders I respect (and who have been fighting for equity since before I could spell it) on the Blueprint 15 board, and many other wise advocates and community members who are enthusiastic about the concept. It's my hope that intentions are good, and a true opportunity is at our feet, but I believe it's the job of the public and the press to advocate and question, to ensure the best possible outcome. I am grateful to Ken Jackson and others for pushing necessary conversations, however difficult, and also to the folks at Allyn Family Foundation for responding.

In the spirit of that dialogue, and after talking with folks in the community and listening to SHA Director Bill Simmons, and Allyn Family Foundation Director Meg O'Connell speak about the project on WRVO's Campbell Conversations, on Saturday, I have some concerns:

- According to Simmons, displaced Pioneer Homes, Central Village, and McKinney Manor residents will receive Section 8 housing choice vouchers, and will have the right to return when construction is complete. However my understanding is there will not be one-to-one replacement of low-income housing in the new design, since the area will be split with market rate and commercial spaces. When all is said and done, are we losing public housing units? We currently have 2,340 units, with thousands of people on waiting lists. The list for Section 8 vouchers has been closed for ten years and still has 3,000 people waiting.

- Affected residents will be relocated in phases, and Simmons said he's confident the local housing market can easily accommodate them. Considering Syracuse's deficit of public housing and the scarcity of landlords who will accept Section 8, let alone accept it and provide safe, well maintained housing, I am concerned that people with vouchers to "go anywhere" will in reality have nowhere to go.

- It's disruptive and costly to move, and yet 25% of Syracuse residents are forced to do so at least once per year. Regardless of how much input residents may have in the planning process (there are currently two residents on the Blueprint 15 board), they may not have the means to move back and take advantage of the improvements, even if they want to. Will they just continue to be poor, elsewhere?

- Why aren't community groups like TNT Southside represented on the board?

- I understand that regardless of the outcome of the I-81 debate, it will not be an option for residents to remain in Pioneer Homes, Central Village, and possibly McKinney Manor. Considering our inadequate public transportation and sprawling city, we must recognize there are few locations with the same proximity to the Centro Transit Hub, hospitals, and downtown offices and businesses, including the social services many rely upon. Moving to a less central location can add a great deal of travel time

and complication for the folks who ironically are least likely to use I-81, because many do not have cars. This means less time with family, less time to attend to personal health and well being, and more time out in the elements. I am all for deconcentrating poverty, but worry in this case specifically what it will cost for the poor.

- Children who rely on the Boys and Girls Club for programming and Dr. King school also must be accommodated compassionately. The move will be disruptive for kids who are already dealing with too much, and potentially take them away from some of the most important and grounding spaces they have outside the home. Specific targeted support is needed throughout the transition to assure the positive outcomes of this project benefit these children, first and foremost.

- Mr. Simmons said many residents are interested in moving out of the area. If that is true, and folks are able to afford to pack up and leave Syracuse because that's what they want, that's great. But as a wise friend pointed out to me today, we may improve the conditions within a geographical area by changing the demographic, but again, the folks pushed out will still be poor. We owe it to them and to the children, grandchildren, and great-grandchildren of the 15th Ward to *specifically* ensure their lives are improved.

- I spoke with my friend Deka Dancil, who was a child living with her mother and siblings in the Kennedy Square Apartments when that complex was demolished and tenants in 409 affordable housing units were pushed out, in 2007. She said it was the nicest apartment she lived in, throughout her whole childhood.

- For people relying on private housing, the standards for safety and condition are not the same as in public housing. Another friend of mine is currently being pushed out of the home she has been living in on the North Side for barely a year because her landlord has failed to comply an order from the Onondaga County Department of Health to remediate the lead paint that has poisoned her children. There aren't a lot of good options out there, unfortunately, and we must avoid repeating our mistakes. Today, the neighborhood around the former Kennedy Square may seem "improved" to some. There are nice office buildings, several luxury apartment buildings, restaurants, and a trendy bike shop. But is life improved for the former residents? Where are they now, and what is their life like? Can they afford those restaurants and housing? See link to this letter re Kennedy Square: [Sweetheart deal for Kennedy Square Hurts Poor-Letters]

Kennedy Square

Former site of affordable housing, Kennedy Square Apartments

CRIME AND "QUALITY OF LIFE"

- I have been looking into some of the other communities where Purpose Built has intervened. There's a lot of really nice sounding PR and stats such as a 97% reduction in violent crime for the East Lake community in Atlanta GA. One tenant who lived in both iterations of the housing complex said "They tore down hell, and they built heaven. Now we are living in paradise." That sounds wonderful, and I am truly happy Ms. Eva Davis lived to see that happen. But again, poverty (and the social problems that come along with it) weren't fixed; rather the poor (or most of them) were moved out.

- There are also policies that come along with the mixed income housing. Concerning the aforementioned Atlanta project, I found this:
- *"When the housing project was torn down, the requirements for residents who wanted to return to the neighborhood were that they have no felonies on their record, and be either employed or in training. Although these requirements exempted only 13% of the residents, ultimately only about a quarter of families elected to return."* [Source: Here's how one Neighborhood is Fighting the Negative Aspects of Gentrification

- What other kinds of policies might adversely affect the community that most deserves to be there? How can we avoid some of the failures of mixed income housing, to ensure this doesn't happen?

- If we are truly planning to integrate the existing community with market rate tenants and commercial spaces, what are we going to do to prevent BBQ Becky, Permit Patty, Corner Store Caroline, etc., from calling the police on folks for living their lives? Are we ready to train our police force to handle white supremacy in this context, instead of criminalizing the black and brown folks when conflicts arise?

- Will the poor residents be able to afford the amenities offered by incoming commercial tenants in the revitalized neighborhood? Will they be able to eat at the restaurants, buy the coffee, sign up for the yoga classes, or shop at the stores?

These are some of the questions bouncing around for myself and others. My intention is not to be in opposition to this project. I'm not in opposition to it, and am holding onto my optimism that we can do this right, because I believe in my city. But I also believe in my city's history, and know that if we don't explicitly build equity into the fabric of *every aspect* of Blueprint 15, we will not achieve it, despite the best of intentions. I hope we can work together as a community to learn from past mistakes and truly follow through on building a true neighborhood and city "for all".

I understand that regardless of the outcome of the I-81 debate, it will not be an option for residents to remain in Pioneer Homes, Central Village, and possibly McKinney Manor. Considering our inadequate public transportation and sprawling city, we must recognize there are few locations with the same proximity to the Centro Transit Hub, hospitals, and downtown offices and businesses, including the social services many rely upon. Moving to a less central location can add a great deal of travel time and complication for the folks who ironically are least likely to use I-81, because many do not have cars. This means less time with family, less time to attend to personal health and well being, and more time out in the elements. I am all for deconcentrating poverty, but worry in this case specifically what it will cost for the poor.

Will Blueprint 15 build a true neighborhood and city “for all”? Let’s Have a Conversation

Central NY business group calls last-minute ‘skyway’ push another effort to delay I-81 project in Syracuse

A view of I-81 in Syracuse, facing southeast from the Geneva Tower at SUNY Upstate Medical University June 26, 2014. Lauren Long | llong@syracuse.com

Syracuse, N.Y. -- A leading Central New York business group says recent calls to reconsider Interstate 81's future by, once again, looking at a replacement bridge is another delay tactic in a decade-long analysis of the highway system.

The idea for a massive bridge to replace the aging highway "is nothing more than a new name for the elevated highway concept that has already been studied and dismissed through the course of the extensive I-81 process," Rob Simpson, who heads CenterState CEO, wrote in a sharply worded release today.

Already, Simpson said, the state has rejected rebuilding an elevated I-81 on its current path because it would raze more properties, create a longer construction schedule and would cost more money. That rejection, which isn't yet final, comes after years of study, analysis and meetings with community members about the highway system.

A last-minute idea from some "skyway" bridge supporters -- to name the new highway after abolitionist Harriet Tubman -- would attach her name to what Simpson and others say are the very oppressive conditions that she fought.

"Such a divisive skyway would only perpetuate deleterious impacts on the very communities of color who have lived in the shadow of I-81 for 60 years," Simpson wrote. "Let's honor the legacy of Harriet Tubman by creating solutions to address the racial and social inequities she fought."

State and federal transportation officials are proposing to tear down a portion of I-81 that runs between the University Hill and downtown -- and through a public housing neighborhood -- and reroute highway traffic around the city. The $2 billion plan calls for expanding parts of Interstate 481 (the new I-81) and rebuilding a portion of Interstate 690 in the heart of the city.

In the new configuration, traffic headed to and through Syracuse would also disperse along new exits onto city streets, including Colvin and West streets and Crouse and Irving avenues.

Currently, the state is seeking public comments on the project through Sept. 14.

Those supporting the idea for a massive replacement bridge have provided no detailed engineering plans. Weeks ago, Syracuse Mayor Ben Walsh called the "skyway" a pie-in-the-sky" idea. One skyway supporter last week said he doesn't know the exact size of the bridge he's proposing.

"This status quo mentality represents a short-sighted vision that puts parochial self-interests over what is best for the community as a whole – investment and progress," Simpson wrote. "The highway is now four years beyond its useful life and no longer meets current federal highway standards for safety. At stake is injury and loss of life, increased costs and the possibility of missing a once-in-a generation infrastructure opportunity."

Supporters of the skyway say their idea would keep more traffic from using city streets and it would create an iconic structure that Syracuse would become known for.

Several top officials, including U.S. Transportation Secretary Pete Buttigieg and Sen. Charles Schumer, support the teardown plan, which the state calls the "community grid." Gov. Kathy Hochul on Sunday told NewsChannel 9 she also supports the grid plan.

Syracuse Assemblyman William Magnarelli has called for more time to assess the project and to come up with a different solution. Rep. John Katko has also called for a longer public comment period.

DOT officials say I-81 is inspected and repaired regularly and remains safe.

Maybe, someday, someone will even mention the future of the mass of affected public housing tenants? Wouldn't that be something!

https://cnycentral.com/news/local/following-push-by-some-local-lawmakers-i-81-public-comment-period-gets-30-more-days

Following push by some local lawmakers, I-81 public comment period gets 30 more days

SYRACUSE, N.Y. —

The public comment period for the I-81 community grid proposal will now go until October 14th.

Representative John Katko announced the decision Thursday night after advocating for the move, claiming constituents needed more time to read the proposal. This extension lasts 30 days beyond the 60-day original public

comment period, which included two large public comment sessions (one virtual), eight community sessions, and an open web portal for comments.

"This is a monumental project that will impact the City of Syracuse and surrounding region for generations to come," Rep. Katko said. "As I've always said, I stand ready to provide federal support for the plan our community chooses."

Not all local officials supported the representative's push for more time in the public comment period. Syracuse Common Councilor Joe Driscoll penned an op-ed this week writing in part, "*Repeatedly we hear 'our concerns are not being heard'. although we've had dozens of community forums going back a decade now. Like a child who wants ice cream for dinner, they are claiming no one is listening to their requests, and there is no consensus. The truth is, your views have been heard and addressed, but after extensive discussion, you are not getting everything you want. There is a massive difference between not being heard, and not getting what you want.*"

That op-ed also referenced another opinion piece written by Assemblyman Bill Magnarelli, calling for the DOT to change from just a community grid to include a "sky bridge" where the viaduct stands now. The DOT DEIS report released says they found rebuilding the viaduct was more expensive and disruptive than the Community Grid alternative that has been selected.

Representative Katko did not say whether the 30-day extension included any additional in-person meetings.

(Khalid) Bey said the listening process by Blueprint 15 officials was “not adequate outreach. The question is, who is it for? People in Pioneer Homes and Central Village and McKinney Manor didn’t ask for it. So who are they changing the look of the thing (neighborhood) for? If it’s truly about the people, then empower the people. Let them have first right of refusal and (insure) that they can actually come back.”

“Welch-Allyn”?

[The Central New York Business Journal, headquartered in Syracuse, N.Y., is the only print, digital, and events company in Central New York that focuses on local business. Our emphasis is on business owners, managers, and other corporate decision-makers. The average subscriber is a business owner, partner, middle manager and is 50 years old, a college graduate, and has a household net worth of $1.55 million, and a household income of $215,000 annually. He/she works for a company with a median of 24 employees which generates $4.9 million in annual revenues.]

An Illinois medical-products company plans to acquire Hillrom (NYSE:HRC) — the parent company of Welch Allyn, Inc. in Skaneateles Falls — in a $10.5 billion deal.

The Central New York Business Journal
By Eric Reinhardt (ereinhardt@cnybj.com), 9/2/2021

Hillrom, a global medical-technology firm, is headquartered in Chicago, Illinois, while Baxter International (NYSE:BAX) is based in Deerfield, Illinois, a Chicago suburb.

Welch Allyn in Skaneateles Falls will soon have a new owner. Baxter International (NYSE:BAX), which is headquartered in a suburb of Chicago, Illinois, plans to acquire current Welch Allyn owner Hillrom (NYSE:HRC) in a $10.5 billion deal. (Eric Reinhardt / CNYBJ)

Hill-Rom Holdings, Inc. in June 2015 announced plans to acquire Welch Allyn for about $2.05 billion in cash and stock. Nearly three years later, Hillrom formally dedicated a $12.7 million expansion project that added about 100,000 square feet to the Welch Allyn campus.

Welch Allyn employs about 1,000 people in Skaneateles Falls, according to CNYBJ Research.

International Business Times, US
30 Major U.S. Corporations Paid More to Lobby Congress Than Income Taxes, 2008-2010
By **ASHLEY PORTERO**: Subscribe to Ashley's **RSS feed**
December 9, 2011
https://web.archive.org/web/20120107173713/http://www.ibtimes.com/articles/264481/20111209/30-major-u-s-corporations-paid-lobby.htm

Excerpt:
Companies' Laying Off Workers While Receiving Tax Rebates, Raising Executive Pay

Among the 20 companies who paid zero or less in state corporate taxes are utility provider Pepco Holdings, the pharmaceutical company Baxter International, and Intel Corporation (INTC).

Baxter International (BAX) and Intel are among the corporations that Public Campaign reports did not did not pay federal incomes during the same three-year period.

Of those companies, General Electric (GE) spent the most on lobbying, expending about $84 million on lobbying while paying a federal income tax rate of negative 45 percent on more than $10 billion in U.S. profits. PG&E; Corp. followed General Electric, spending almost $79 million on lobbying, while paying a negative 21 percent tax rate on $4.8

billion of U.S profits, and Verizon Communications, which spent $52 million on lobbying while paying a negative 3 percent tax rate on $32.5 billion of profits.

A negative effective tax rate means that a company enjoyed a tax rebate, usually obtained by carrying back excess tax deductions and credits to an earlier year, thereby allowing the company to receive a tax rebate check, according to Citizens for Tax Justice.

U.S. House Deputy Whip Kevin Brady, R-Tex., is currently making a last-ditch effort to include a corporate tax repatriation holiday on legislation to extend a payroll tax cut, an extension that Senate Majority Leader Harry Reid, D-Nev., said could put an extra $1,500 into the pockets of middle class families each year. While those in favor of the corporate tax repatriation provision -- which would give U.S. businesses a temporary tax break on as much as $1 trillion in overseas income -- insist it would boost the nation's sluggish economy and make it easier for corporations to create jobs, the Congressional Budget Office reports tax repatriation holidays ranks dead last among 13 policy options for creating jobs. The CBO estimates that over the 2012-2013 period, a repatriation holiday would, at best, create the equivalent of one-full time job for every $1 million in federal costs.

Even while dodging most of their state and federal taxes between 2008 and 2010, Verizon (VZ) laid off more than 21,000 U.S. employees, while Boeing, Wells Fargo, General Electric, American Electric Power, and FedEx also let go of thousands of workers. Because companies can be reluctant to make data changes in U.S. employment available, Public Campaign reports it was not able to find up-to-date employment statistics for many of the companies evaluated in the report.

Moreover, as it was laying off employees, General Electric gave their top executives a 27 percent pay raise between 2008 and 2010 -- executives received more than $75 million in compensation in 2010. Wells Fargo increased executive pay by a whopping 180 percent, upping executive compensation from $17.8 million in 2008 to almost $50 million in 2010, while Boeing, FedEx and American Electric Power also instituted lavish executive pay raises while laying off thousands of lower-level workers.

In fact, 2010 year was a record year for executive compensation. The CEO's of some of the largest U.S. corporations made, on average, $11.4 million in 2010, about 343 times more than workers' median pay, according to an analysis by the American Federation of Labor, the widest gap between executive and employee pay in the world. CEO pay has skyrocketed since 1980, when chief executives were only paid about 42 times more than the average blue collar worker.

Meanwhile, the U.S. Census Bureau reports that the median household income fell $3,719 between 2000 and 2010, when measured in 2010 dollars.
Public Campaign released its report on Wednesday, just as thousands of unemployed Americans from across the nation swarmed K Street in Washington, D.C., the lobbying center for some of the world's most profitable corporations. The march was part of "Take Back the Capitol," a four-day series of events aimed at persuading Congress to pass comprehensive job creation measures that will benefit their constituents, rather than special interest groups.

Smithsonian Launches "Our Shared Future: Reckoning with Our Racial Past" With a Virtual Forum

Initiative Will Convene Comprehensive Conversations About Race and Racism Through a National Forum, Regional Events and Educational Resources

August 12, 2021 10:26 AM Eastern Daylight Time

WASHINGTON--(BUSINESS WIRE)--The Smithsonian will kick off its new race initiative, "Our Shared Future: Reckoning with Our Racial Past," with a virtual forum Aug. 26. The initiative will bring together resources from across the Smithsonian to explore how Americans understand, experience and confront racism through several critical lenses like wellness, wealth and the arts. "Our Shared Future: Reckoning with Our Racial Past" will include virtual and live events across the country as well as digital content, storytelling and learning resources for students and educators.

Using the Smithsonian's vast resources and expertise in history, art, science and culture, the initiative will convene conversations about race and racism across the country, exploring all races in America and how Americans experience race through six main themes: Race and Wellness; Race and Wealth; Race and Place; Race, Policy and Ethics; Race Beyond the U.S.; and Race, Arts and Aesthetics. The race initiative will invite the public to join the conversation through website response prompts, and it will offer opportunities for the public to self-produce programs to engage in conversations in their own communities using downloadable resources available on the initiative website.

Leaders, collections and programming from the National Museum of African American History and Culture, the National Museum of the American Indian, the Smithsonian Latino Center, the Smithsonian Asian Pacific American Center, the National Museum of American History, other Smithsonian museums and centers, and the Smithsonian American Women's History Initiative will be

engaged in this project.

“At this pivotal moment in history, we need to talk openly about the complexities of race and the effects of racism that continue to touch all aspects of American society,” said Lonnie G. Bunch III, Secretary of the Smithsonian. “‘Our Shared Future: Reckoning with Our Racial Past’ is an important way for us to encourage that conversation. This initiative continues the Smithsonian’s 175-year tradition of using its unique content to help all Americans seek a better shared future, one that embraces everyone and continues us on a more diverse, inclusive path toward being a more perfect union.”

Bank of America’s support of the race initiative, first announced last year through a $25 million commitment, builds on the company’s overall $1.25 billion, five-year commitment to advancing racial equality and economic opportunity in the communities it serves. The company has supported Smithsonian museums and cultural initiatives for more than three decades and is a founding member of the National Museum of African American History and Culture.

“We recognize the need for meaningful and productive discussions about race and racism in our history and nation today,”

"A Concern ... "!

"A concern Dancil has, though, is that the project could displace residents who would not be able to reap its benefits, essentially repeating history from the original viaducts.

"'Worst case scenario is that the neighborhood right now in the shadow of the viaduct where many of the disadvantaged and people of color of Syracuse live, that that area will be gentrified and they'll be displaced,' Dancil said. 'That they'll not be able to return those who want to. That all the wonderful upgrades that will happen in the area, that people that live there now would not be able to benefit from it and that they'll have to leave for those upgrades to happen just as anything else.'"

https://nccnews.newhouse.syr.edu/i-81-a-monument-to-oppression/

I-81: A Monument to Oppression

By

Reporter: It's a monument to systemic racism and oppression. The damage the I-81 viaducts have done to the city of Syracuse go far beyond any accidents on its roads.

Corre Williams: "I have family members who lost their homes, you know, had to move, sell their house, basically, the city bought them out"

Reporter: Corre Williams has lived his entire life in Syracuse, and saw with his own eyes the impact the viaducts had when they were built in the 50s and 60s. His family lived in the 15th ward, which used to hold over 90% of the city's black population. But when the federal highway act passed in 1956, the ward had a target on its back.

Deka Dancil: "75% of that neighborhood where 93% of the black population lived was razed for urban renewal and to make way for the 81 highway."

Reporter: This led the city's displaced black population to move south, and its white population move out entirely, decimating the tax base, and throwing thousands into poverty.

Williams: "Certain sides of town would have issues with other sides of town where you couldn't go, so that's when I guess the drug trade started up."

Reporter: As the viaducts near the end of their expected shelf life, the city is close to breaking ground on a plan in the works for years to replace I-81 with what they call the community grid, which would tear down the viaducts completely, potentially creating thousands of construction jobs in the process. Deka Dancil's Urban Jobs Task Force is trying to make sure they go to local residents.

Dancil: "We want to see as many Syracuse city residents as possible working on the project."

Reporter: The plan would see eyesore viaducts such as this move to ground level, making way for brand new business opportunities, such as the planned canal district by the Erie Canal Museum, where brand new business art and restaurant opportunities could revitalize the area. But perhaps the biggest change under the plan would take place at Almond Street…
…where I-81's impact is most visible as the viaduct runs throughout the entirety of the street. But under the community grid plan, this street would look entirely different, including this intersection behind me of Almond Street and Harrison Street, which would be unrecognizable under the plan's current blueprint. The

economic opportunities in this project are endless, and community leaders and citizens alike are giddy about its possibilities. But it is not without its drawbacks, especially for those who say that the project could potentially repeat history.

Dancil: "We are very nervous that, one, that people are going to be displaced, that the area is going to be gentrified, that the people who have been most impacted by the highway historically and who will bear the brunt of the burden when it is rebuilt will not have the benefit."

Reporter: But for lifelong residents like Corre Williams, the project represents the first step to righting the wrongs of history.

Williams: "Symbolize a reckoning of understanding what the damages that were being done to a group of people."

Reporter: The project is expected to break ground as early as 2022. James Corrigan, NCC News.

SYRACUSE, N.Y. (NCC News) – Corre Williams has lived in Syracuse his entire life, and can remember a time when the violence in the streets today made way for comradery.

"I had a pretty good childhood," the 53-year-old Williams said. "We were a close knit community. Kids played together outside, football in the streets. You were connected one way or another. If you didn't know who I was, you knew who my family was."

As he grew up in the city, things began to change. Poverty became more paramount, and drugs became commonplace in his native south side. It was not hard to see the root cause of the community's strife, as many of its residents had been recently displaced and were struggling to find their footing. This included the family of Corre Williams.

"I have family members who lost their homes, had to move, sell their house," Williams said. "Basically, the city bought them out. And basically, families were displaced. You had neighborhoods where there were thriving businesses, grocery stores, jazz clubs, clothing stores, and markets and different things like that, and everyone basically patronized each other and supported one another's' business.

Once things started getting torn apart, basically were moved to other areas. And then when they built the high rise, it was more or less everybody was basically packed into that one area.

The high rise refers to the I-81 viaducts, which slices through the heart of Syracuse for cars to pass over. Williams' family lived in the 15th Ward of Syracuse, which held over 90% of the city's Black population at one point. After the Federal Highway Act was passed in 1956, the ward was leveled in order to build the viaducts, and its residents were displaced, mostly to the south side. The area's white residents responded by moving to the suburbs, decimating the city's tax base and leaving no structure for the displaced residents to settle in.

"The impact can still be seen today," saidSyracuse's Urban Jobs Task Force president Deka Dancil. "I-81 in combination with redlining and urban renewal has caused the kind of economic devastation that we have not been able to overcome."

As the viaducts near the end of their expected life, debate has raged for years on how to properly replace them. After multiple proposals were looked over, city officials and community leaders came up with a solution in 2019 called the community grid, which would bring the viaducts to ground level and direct traffic through the city, rather than over it. Proponents of the grid say this would create more opportunity for local businesses to thrive, as well as create thousands of construction jobs, which activists are trying to ensure go to city residents.

"Our goal is to maximize local hire on the I-81 Project," Dancil said of her Task Force. "We want to see as many Syracuse city residents as we can working on a project without cutting any corners on safety."

A concern Dancil has, though, is that the project could displace residents who would not be able to reap its benefits, essentially repeating history from the original viaducts.

"Worst case scenario is that the neighborhood right now in the shadow of the viaduct where many of the disadvantaged and people of color of Syracuse live, that that area will be gentrified and they'll be displaced," Dancil said. "That they'll not be able to return those who want to. That all the wonderful upgrades that will

happen in the area, that people that live there now would not be able to benefit from it and that they'll have to leave for those upgrades to happen just as anything else."

Despite the potential drawbacks, for lifelong residents like Corre Williams, the project provides a sense of hope for a community that needs it.

"Since I was a kid, that's all I knew," Williams said. "So seeing that come down, I will think it maybe symbolizes a reckoning of understanding of the damages that were being done to a group of people."

How the Grid will make it easier to get around

by inthesaltcity

The I-81 Draft Environmental Impact Statement put a lot of effort into explaining exactly how many minutes it would take to drive a car between different points in the County depending on what NYSDOT ultimately decides to do with the I-81 viaduct. NYSDOT estimates, for instance, that in 2056 during the morning rush it'll take 27 minutes to get from Cicero to Lafayette if they leave the viaduct as it is, 23 minutes if they build a brand new viaduct, and 27 minutes if they build the Community Grid.

But the I-81 project's biggest transportation impact won't have anything to do with how long it takes to drive a car between Cicero and Lafayette. Instead, the I-81 project is going to decrease the number of car trips between such far flung locations and replace them with much shorter carless trips by changing the geography of where people can live in Onondaga County.

In general, if you were to walk from the edge of the Syracuse metropolitan area to its center at Clinton Square, each area you passed through would be more densely populated than the one you saw last. Onondaga County is more densely populated than predominantly rural Madison and Oswego Counties. Onondaga County's inner ring suburbs are more densely populated than its newly built exurbs. The City's neighborhoods are more densely populated than most all of its suburbs. The City's older closer-in neighborhoods are more densely populated than the more recently developed neighborhoods at its edge.

And this makes a good deal of sense because it's good to live near the center of things, so that's where lots of people choose to live. It's good to have ready access to hospitals and schools and places to work and places to socialize and lots of people to socialize with. Syracuse is the only place in all of Central New York where a person could step out their front door and be within walking distance of 50,000 jobs.

But once you reached the very center of the city, this pattern of increasing population density would all of a sudden reverse. Downtown Syracuse and the area that immediately surrounds it is significantly less densely populated than neighborhoods like the Northside and the Southside.

This is a real paradox, because the City's center is one of the best places to live in order to enjoy the benefits that cities bring—being near stuff—and it's obvious that people *want*to live in this area since the few that are pay exorbitant rents for the privilege.

But very much of the very middle of Syracuse is basically barren because of I-81. Cars promised to provide ready access to everything Syracuse had to offer—the jobs, the institutions, the community—without actually having to live near any of it. All they required was a highway and a parking spot. Syracuse's leaders happily got to work demolishing housing, schools, businesses, and churches to make space for I-81, its arterial feeders, and the parking lots that surround and sustain them.

All that pavement creates a huge dead zone around the center of town that hurts Syracuse in two ways. First, it prevents people from living in places where people absolutely want to live. Second, it cuts City neighborhoods off from the opportunities available in the City's center.

People want to live near the center of town, but they can't because the highway takes up too much space. The highway makes it so that the most desirable areas to live instead are on the exurban fringe. So people move out to the exurban fringe, but everybody's moving to a different part of that fringe whether it's Camillus or Lysander or Clay or Manlius. The community gets dispersed over an enormous area, and that's how people find themselves in situations where they regularly need to get from Cicero to Lafayette for book club or work or their kid's soccer game.

Tearing down the I-81 viaduct is a huge step towards fixing this transportation failure. The viaduct covers 18 acres of land, and tearing it down will free up a lot of space where people could find a good place to live. It will also make a lot of currently vacant land much more suitable for housing because there won't be a big ugly polluting noisy highway right nearby anymore.

With more people living closer together, more of the places they need to go and the things they need to do will be located in a smaller area, so the post office and the pharmacy will be a 5 minute walk from home rather than a 5 minute car ride. As more people move to the center of town, there will be less need for all that parking and all those arterials, and there will be even more room for more people.

This trend is already underway. The five census tracts that surround the I-81 viaduct grew by 26% between 2010 and 2020. The people who accounted for that growth are not going to have to drive nearly as often or nearly as far as they would if they had instead moved to someplace like Fabius. When NYSDOT tears down the viaduct and replaces it with the Grid, they will make it more possible for more people to live similarly. That's going to be the Grid's biggest transportation impact.

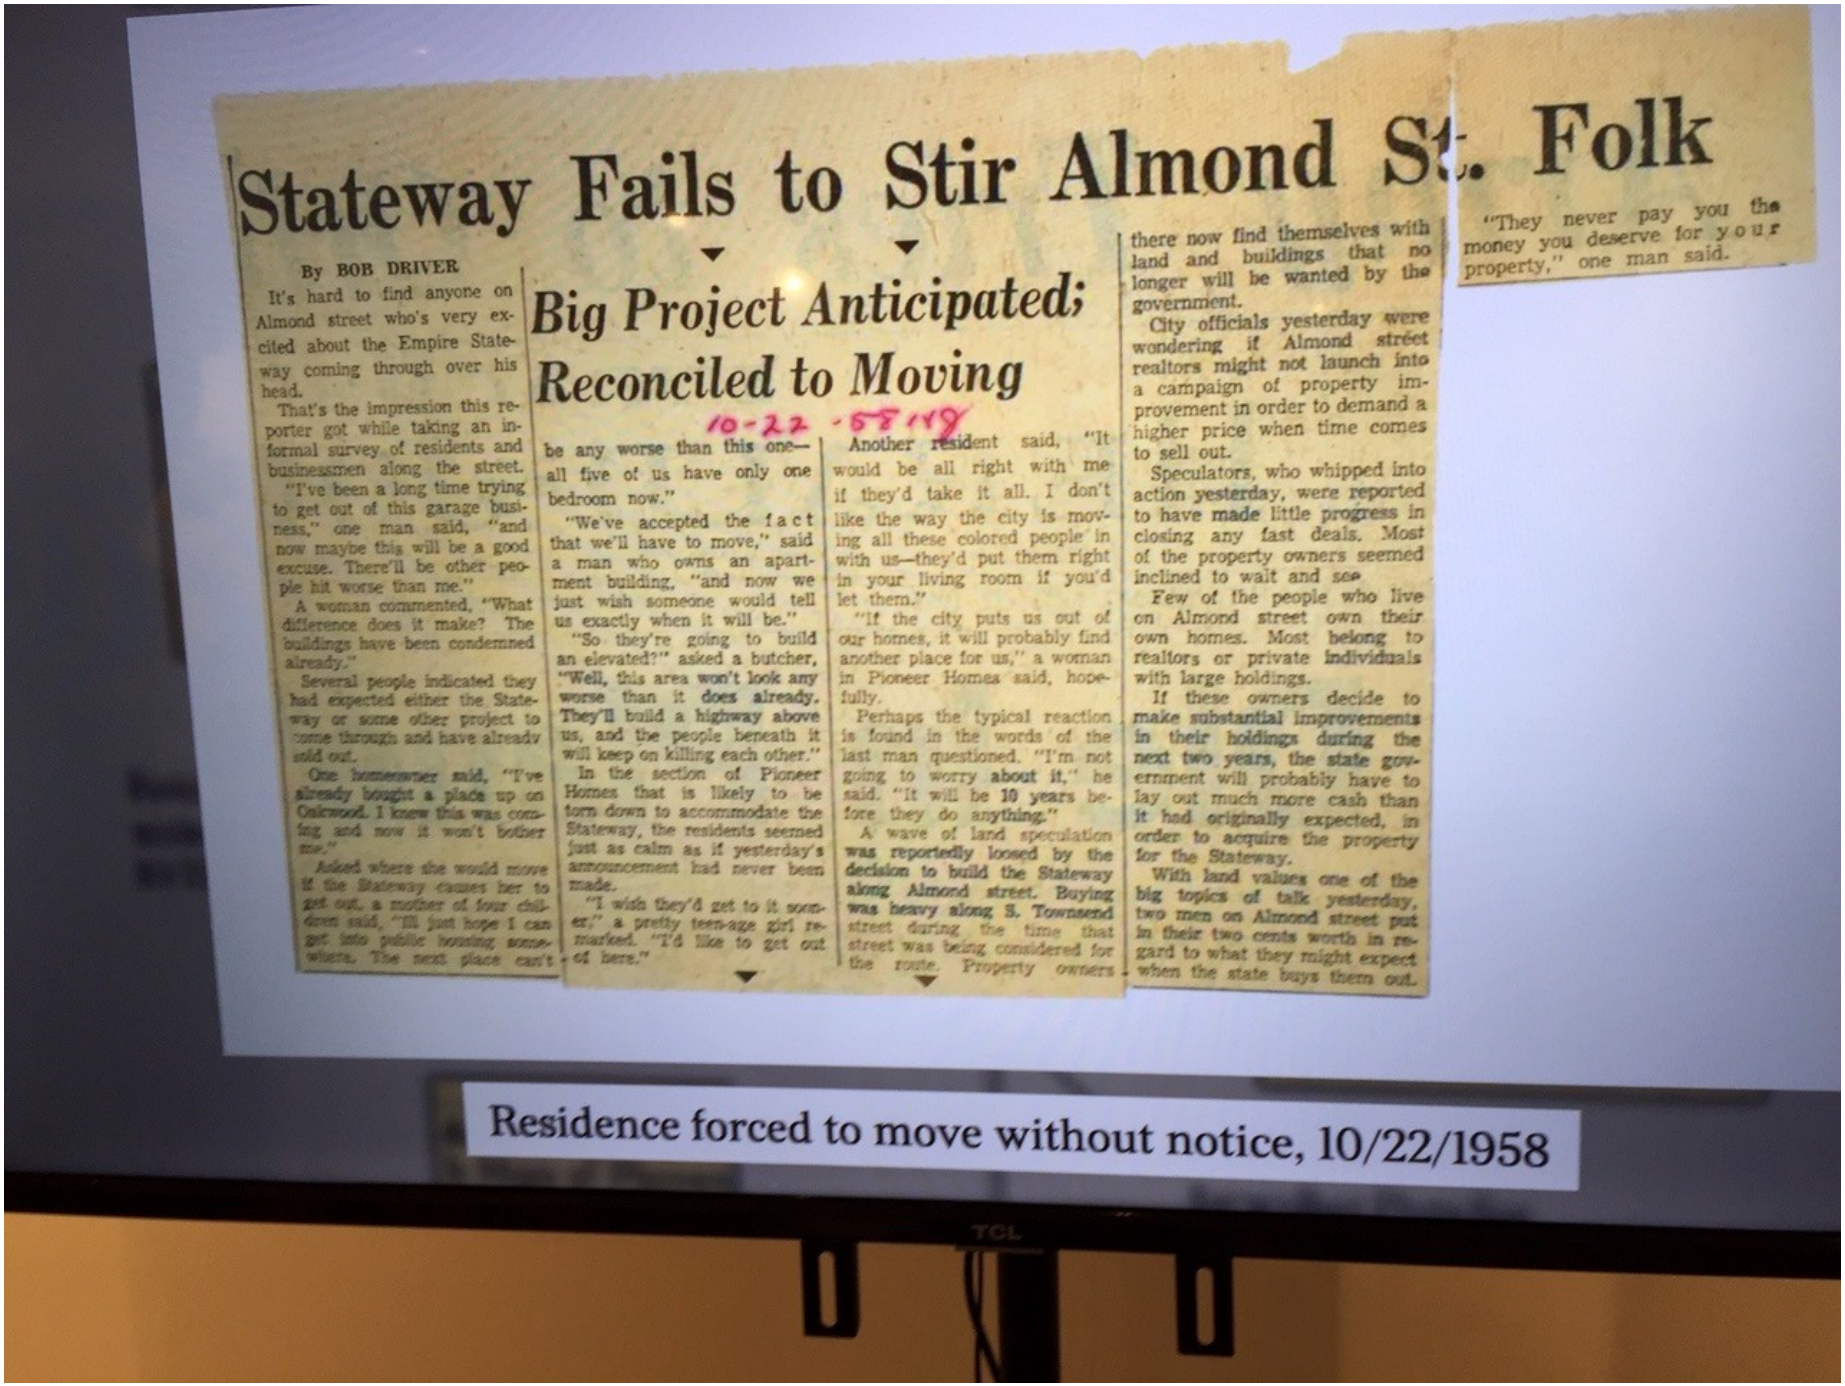
ATTENTION: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

I'll resend emails to Common Councilors and others prior to the “forum”. Will look for email addresses for Chris Bolt WAER, FOCUS, GreeningUSA and CNY Solidarity Coalition.

Don’t think I have the patience to “attend’, and assume that anything "unusual”, like noticeable concern by all, or even any of the candidates, for public housing tenants might be "newsworthy”. If you noticed, even the presumably progressive “upstate” people, in their online newsletter ignored the public housing matter, in fact, ignored any poor people’s housing or related matters, in their presumably expert support for I-81 removal.

Despite Lanessa’s outreach, we have yet to hear of some serious grassroots rumbling, though the seeming administrative delays may be indicative of something. All I have “heard" is that public housing tenants, like in 1958 below, are waiting and listening.



Stateway Fails to Stir Almond St. Folk

Big Project Anticipated; Reconciled to Moving

10-22-58 NP

By BOB DRIVER

It's hard to find anyone on Almond street who's very excited about the Empire Stateway coming through over his head.

That's the impression this reporter got while taking an informal survey of residents and businessmen along the street.

"I've been a long time trying to get out of this garage business," one man said, "and now maybe this will be a good excuse. There'll be other people hit worse than me."

A woman commented, "What difference does it make? The buildings have been condemned already."

Several people indicated they had expected either the Stateway or some other project to come through and have already sold out.

One homeowner said, "I've already bought a place up on Oakwood. I knew this was coming and now it won't bother me."

Asked where she would move if the Stateway causes her to get out, a mother of four children said, "I'll just hope I can get into public housing somewhere. The next place can't be any worse than this one—all five of us have only one bedroom now."

"We've accepted the fact that we'll have to move," said a man who owns an apartment building, "and now we just wish someone would tell us exactly when it will be."

"So they're going to build an elevated?" asked a butcher, "Well, this area won't look any worse than it does already. They'll build a highway above us, and the people beneath it will keep on killing each other."

In the section of Pioneer Homes that is likely to be torn down to accommodate the Stateway, the residents seemed just as calm as if yesterday's announcement had never been made.

"I wish they'd get to it sooner," a pretty teen-age girl remarked. "I'd like to get out of here."

Another resident said, "It would be all right with me if they'd take it all. I don't like the way the city is moving all these colored people in with us—they'd put them right in your living room if you'd let them."

"If the city puts us out of our homes, it will probably find another place for us," a woman in Pioneer Homes said, hopefully.

Perhaps the typical reaction is found in the words of the last man questioned. "I'm not going to worry about it," he said. "It will be 10 years before they do anything."

A wave of land speculation was reportedly loosed by the decision to build the Stateway along Almond street. Buying was heavy along S. Townsend street during the time that street was being considered for the route. Property owners there now find themselves with land and buildings that no longer will be wanted by the government.

City officials yesterday were wondering if Almond street realtors might not launch into a campaign of property improvement in order to demand a higher price when time comes to sell out.

Speculators, who whipped into action yesterday, were reported to have made little progress in closing any fast deals. Most of the property owners seemed inclined to wait and see.

Few of the people who live on Almond street own their own homes. Most belong to realtors or private individuals with large holdings.

If these owners decide to make substantial improvements in their holdings during the next two years, the state government will probably have to lay out much more cash than it had originally expected, in order to acquire the property for the Stateway.

With land values one of the big topics of talk yesterday, two men on Almond street put in their two cents worth in regard to what they might expect when the state buys them out.

"They never pay you the money you deserve for your property," one man said.

Residence forced to move without notice, 10/22/1958

Sharon Millhouse

From: dglynn=csjalbany.org@mg.gospringboard.io on behalf of Doreen Glynn <dglynn@csjalbany.org>
Sent: Tuesday, August 10, 2021 10:10 PM
To: David Smith
Subject: Tear Down the Structural Racism of I-81

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Doreen Glynn

Sharon Millhouse

Dear

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Doreen Glynn

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.

● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal "SEP 14" local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Germaine Gogel

Sharon Millhouse

In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Harriet Goldberg

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.

● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal "SEP 14" local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Sophie Golub

Subject: 81 proposal for grid

ATTENTION: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

I have attended many meetings about the proposed 81 grid and I don't like this plan.

The exit for 481 East is overloaded right now. It was poorly planned and there is a bottleneck every evening at rush hour. The new plan does not address the problem.

This will ruin the suburbs of DeWitt and Fayetteville with traffic. The roundabout in front of an elementary school in Syracuse is dangerous for children. Once again no thought is given to it.

It is very disappointing that the DOT cannot solve this problem. Many interstates go through major cities for example Interstate 5 goes through Seattle, Los Angeles and San Diego.

Route 90 goes through Cleveland and beyond to the west coast is another example.

Once again Syracuse area is neglected because of lack of money and political clout.

Dear Sir or Madam,

I am writing to express my opposition to the Syracuse Community Grid. When it was revealed that the Community Grid was the chosen proposal to replace I-81, I was absolutely flabbergasted. I found it hard to believe that this option would be chosen based on how many people this Community Grid would impact.

I live in a suburb south of Syracuse and I feel as though the voices of those living in the suburbs was totally ignored. Any time I need to drive north of the city of Syracuse, it is going to be a hassle and cost me more time and fuel. When I attended the DOT Information Session in Lafayette, I asked a representative how I would go about getting to different areas north and west of the City. After hearing the explanation of how I have to proceed to go west, I will definitely avoid going west at all costs. There is NO easy way. I have medical appointments and businesses I frequent in Liverpool and north of the City. It will take me considerably more time to drive to these locations, and once again, there is no easy way to travel. I shudder to think about the impact this Community Grid will have on the businesses north of the City and what this will do to our area's economy. I also worry about all the traffic that will now be diverted to I-481. Companies will have increased costs because all the commercial traffic will now have added mileage to their routes. This will also result in an increase in air pollution from trucks and vehicles.

I ask you to please reconsider the Community Grid proposal and truly listen to ALL the citizens this project impacts.

Very respectfully,

Catherine Goodwin

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.

● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal "SEP 14" local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Renee Goot

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

holly graham

Subject: Tear Down the Structural Racism of I-81

Dear

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Subject: Tear Down the Structural Racism of I-81

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

David Grapka

Subject: Comments on the I-81 project

I am a resident of Onondaga Hill, zip code 13215 of Syracuse, NY. I support the goals of the Urban Jobs Task Force (UJTF), of which I am a member. As many people in Syracuse, I am extremely concerned with the concentrated poverty in our City, a result of an historical exclusion of minorities in many, especially skilled construction jobs. Also, the African-American community has borne the damaging effects of the original building of 81 through their community. Therefore, I strongly urge that:

1. A percentage of the I-81 workhours be designated for Syracuse residents.
2. A percentage of the I-81 workhours should go to workers in our city's immediately surrounding suburbs.
3. A percentage of the I-81 workhours should go to **disadvantaged workers** in Onondaga County, including the city. A "disadvantaged worker" should be defined as someone who has barriers to employment, namely, two or more of the following: was previously incarcerated, is a single custodial parent, receives public assistance, lacks a GED or High School diploma, or is homeless. This goal recognizes that there are pockets of poverty outside the city in Onondaga County.
4. A percentage of the I-81 workhours should go to **NYSDOT trainees**. Through its On-the-Job (OJT) program NYSDOT would train and then place its trainees on the project,
guaranteeing that that they receive on-the-job training in highway work. UJTF would like this opportunity for disadvantaged workers, city residents, and primarily for those living in the project-affected census tracts 42 (Pioneer Homes) and 53 (just south of Pioneer Homes).
5. A percentage of the I-81 workhours should go to **apprentices**. The UJTF noticed the low use of apprentices on the I-690 Teall-Beech project – it was only 4.4 %, a terribly low number. Without establishing an apprentice goal in the governing documents, journeypersons will do most of the work. Other cities and projects often set the apprentice goal at 20%, a goal that doesn't violate the required journeyperson to apprentice ratio. An established goal will help Syracuse residents currently being trained as apprentices to get work close to home on an I-81 project site.

Setting goals on this project is extremely important in changing the trajectory of poverty in our community. Through these goals our community will benefit from a project in the community. The actual goals should be set in collaboration between UJTF, DOT and other aligned parties. The project must then **measure** the success of implementing these goals with accurate data.

Diana Green, 4304 Abbey Rd., Syracuse, NY 13215

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also

provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Barbara Greenberg

Mark Frechette, P.E.
Project Director
New York State Department of Transportation, Region 3
333 East Washington Street
Syracuse, NY 13202

Rick Marquis
Division Administrator
Federal Highway Administration
Leo W. O'Brien Federal Building
11A Clinton Avenue, Suite 719
Albany, NY 12207

Dear Mark and Rick:

I am writing to express my concerns with the announcement of the Community Grid as the Department of Transportations preferred option. I am currently employed at the Homewood Suites by Hilton Syracuse-Liverpool, which is located directly off I-81 at exit 25.

I am worried that re-routing I-81 to the current 481 will cause my employer to lose business or close. My schedule and hours are always made based on hotel needs and availability. If the hotel isn't busy enough I could lose hours, ultimately affecting my income.

Everyday our hotel sells anywhere from 5-30 or more additional rooms on the day of arrival. This means guests who did not have a reservation for a particular date, make their reservation on the day they plan to arrive. Some people walk-in to the hotel without a reservation and book a room to stay. Please do not assume that "today's travelers" have planned ahead and know where and when they are staying because of the advancements we've seen in technology. Yes, technology has helped people have unlimited booking options; however, plans change and some people travel alone and cannot safety utilize the technology to make room reservations for themselves while driving. The assumption being made that same day reservations and walk-ins no longer happen in this industry is not based on fact and can have a detrimental effect on my job and income. It is clear and obvious that whomever believes this assumption did not consult with anyone in the hotel industry, especially the hotels located off I-81 in the Town of Salina. Walk-in hotel business and same day reservations (typically made based on location alone) are certainly not a thing of the past and continue to happen daily at hotels all across America. If my hotel were to lose these 5-30 reservations per day because we are no longer located of I-81 it could cost me my job or the jobs of my co-workers. Additionally, it is important to note a large majority of our reservations – in advance or same day of arrival bookings – are made based on our easily accessible location. Most hotels are built next to freeways and Interstate highways for a reason... people want easy access to their travel routes regardless of traveling for business, leisure, passerby, etc.

I implore you conduct more fact based research on how much revenue would be lost from the travel based industry businesses located off I-81, including hotels, gas stations, restaurants and fast food establishments. The Draft Environmental Impact Statement suggests it would only be 1% decline in business. As a person dealing directly with the guests who choose to stay at our hotel because we're right off I-81, I can assure you it's not merely 1%!

Thank you in advance for your consideration.

Sincerely,

Sara Greenhouse

Subject: Public Comments on the Community Grid DEIS to NYSDOT from CPCS
Date: Friday, August 13, 2021 3:35:30 PM

Dear Mr. Frechette and Mr. Marquis,

Thank you for reviewing comments on the Community Grid Proposal's DEIS. The questions and comments below are respectfully submitted by members of The Citizens to Preserve the (Rural) Character of Skaneateles, which was established in 1988.

We all agree that the City of Syracuse needs to update its cityscape. The opportunities for change are very exciting, but serious questions remain about how the proposed Community Grid plan will address potentially significant traffic issues once the current viaduct has been removed. The proposed Community Grid will have consequences, not only for the City of Syracuse, but also for most of the communities throughout Central New Work.

Potential issues include:

1.) The prospect of clogged streets and intersections in downtown Syracuse. Many experts in the transportation industry question if NYSDOT's calculations of the current traffic on I-81 and the projected growth in the coming decades are based on standard industry formulas. Please explain the source and the formulas behind the calculations behind the current through-traffic on Route 81 and the projected increase in traffic over the next 100 years. In addition, please share the source and rationale behind the projected traffic numbers in the downtown Community Grid after the viaduct has been removed. It is critical that the calculations are reality based, using standard industry measuring techniques. It would be prudent for current and projected traffic estimates to err on the high side of the industry's standard formulas with the hope of more growth in Syracuse. If the traffic calculations in the DEIS are incorrect (experts believe they are far too low), it could be disastrous for all of Central New York. Would the NYSDOT welcome objective traffic professionals to verify and/or debate its traffic calculations? We have exactly one shot at getting this right.

2.). If the proposed Community Grid is built, there will be a significant increase in traffic on the new Route 81 to the east of Syracuse. Municipal leaders anticipate that it will create an expensive burden on communities east of the city and they're bracing themselves as they consider the impacts on their villages and towns. What percentage of the Community Grid's estimated $1.9 billion budget will be dedicated to enhancing the highway, ramps and exits in the communities to the east and north of Syracuse to reduce the impacts of increased traffic, pollution and noise? Is it enough? Have suburban municipal leaders officially endorsed the proposed plan?

3.) According to professionals in the trucking industry, there will likely be a significant increase in long-haul truck traffic cutting through the back roads from the I-81 exits south of Syracuse to points west with the proposed Community Grid. This

will adversely affect dozens of Finger Lakes communities as more 50-foot long-haul freight & trash trucks take short cuts on secondary roads through communities including Cortland, Skaneateles, Aurora, Ithaca and others that are already overwhelmed by oversized truck traffic. Truckers predict that the proposed Community Grid plan (designed to send large long-haul trucks *east* and north for 12 miles on the new I-81 from Syracuse to enter the westbound NYS Thruway exit 9 miles east of Syracuse) will make things worse. West bound truckers coming from the south now exit in Cortland and Whitney Point to wind their way on back roads to Route 20 or the Thruway. Currently more than 250 trucks pass through the Village of Skaneateles each day. If the Community Grid proposal is approved, what enforcement measures will NYSDOT take to prevent time & budget sensitive long-haul truckers from traveling the narrow and winding secondary roads through the Finger Lakes? The road signs on Route 81 and the NYS Thruway encouraging truckers to use the interstates clearly haven't worked. A solution would be for the NYSDOT to include enforceable regulations in the Community Grid proposal to discourage truckers from avoiding Syracuse and cutting through the Finger Lakes communities as they head west.

4.). With the experience of the pandemic there has been a tremendous increase in online purchases causing a colossal paradigm shift in the way consumers shop for goods. As a result, more packages than ever are being shipped on the ground (vs. purchased in bricks & mortar stores.) How have NYSDOT's traffic studies calculated the additional freight being carried to customers from merchandisers (and back)? This is especially pertinent with the impending opening of the enormous Amazon fulfillment center, which is one of the largest in the world, just a few miles away in Clay.

Thank you again for addressing these comments and questions. We look forward to your response.

Sincerely yours,

Holland Gregg
Executive Director
Citizens to Preserve the (Rural) Character of Skaneateles

Subject: Tear Down the Structural Racism of I-81

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Daria Gregg

I support the community grid

Diane Grimes <dsgrimes859@gmail.com>

Tue 8/10/2021 10:52 AM

To: dot.sm.mo.I81Opportunities <dot.sm.mo.I81Opportunities@dot.ny.gov>

ATTENTION: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

Hello and hope you are well. I support the community grid for I81 replacement for the following reasons:

Critical Point #1: Jobs for local people! Support the training and hiring of local persons for the I-81 reconfiguration and rebuilding, specifically support the Urban Jobs Task Force's Recommendations For Building Equity in the Construction Trades including:

· A pro-Syracuse version of the federal government's Local Hire program (called SEP-14 Local Hire) that provides for training and hiring, and

· CWA-PLA agreement on I-81 that includes unions and community representatives in decision-making on the implementation of the I-81 plan.

Rationale: Social justice requires that chronically disadvantaged persons be made a priority for training and job placement in this huge infrastructure project.

Critical Point #2: Public Participation is Essential. DOT should promote and facilitate active participation by neighborhood groups and the public throughout the design and construction phases.

Rationale:
· Through special initiatives by the DOT, residents' concerns and self-interests need to be given due consideration by their significant and continuous input.

· All Central New Yorkers and Visitors to our region will benefit from ongoing active public participation for many decades to come.

Critical Point #3: Changes for South Side! Support the new northbound exit at Colvin Street and the new roundabout at Martin Luther King East along Business Loop 81 [BL81]

Rationale:

· The new exit at Colvin will enhance access for the south side to promote business development and residential life. It will help with the diffusion of traffic going to the university and hence reduce the load further north on BL81.

· The new roundabout at MLKJ East will calm and smooth traffic flow as vehicles enter the street grid and hence reduce safety concerns at the nearby MLKJ School.

Critical Point #4: Health and Safety Concerns should be a priority along the street grid of BL81.

Rationale:

· Maximum speed of 30 mph and narrower 11 feet lanes along BL81 between Oswego Blvd and Martin Luther King Jr East will promote public health and safety for pedestrians and cyclists by calming traffic and is likely to reduce air pollution.

· DOT should use input from multiple sources including experts, “on the ground” people and technical measurements for air quality to monitor developments throughout the rebuild process.

Critical Point #5: Public Bus Transit should be an integral part of the Community Grid Plan including cut outs for bus pull overs and accommodations for Bus Rapid Transit in the future along the grid corridor within BL81.

Rationale: The future of our transportation system must put greater reliance on bus traffic to avoid unnecessary parking and to lower the impact of fossil fuels on our environment.

Thank you for your consideration. Let's undo some of the huge damage done to this community by the original I81 choices.

Sincerely,

Diane Grimes

Dear

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Carol Gross

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.

- Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
- Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

- Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
- Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
- Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

This traffic noise is already unbearable as it is. We planned to sell the house over it and have been talking with neighbors for years about how great it would be to have a barrier wall here to not only block the noise but also the view of the highway as well as their view of our homes/ backyards. Other than that it's a great neighborhood. Hopefully this gets done!

Dear Mr Marquis-

I am a constituent from DeWitt, NY. I attended State DOT meetings regarding the I-81 Project last month and was left stunned by the lack of forethought, information and incompetent planning regarding this generational-altering project.

Please review my Press Release from last week to learn about the potential damage that the current plan will bring to the Region.

Respectfully,

Nathan Gunn

FOR IMMEDIATE RELEASE 9/21/21

LOCAL RESIDENTS RAISE SERIOUS CONCERNS ABOUT DRAMATIC ENVIRONMENTAL HARM CAUSED BY CURRENT I-81 PROPOSAL

Public hearings raise alarms regarding lack of planning

Syracuse, NY: Today, local residents expressed dire concerns and consternation after attending several local Public Hearings regarding the I-81 Viaduct Project Draft Design Report (DDR)/Draft Environmental Impact Statement (DEIS). As more information is becoming made known, several glaring deficiencies have been enumerated:

- Officials produced no information regarding the future environmental impact of major changes and increases in traffic patterns in both the City and suburbs of Syracuse. No meaningful information was referenced in regards to emissions, noise or sound pollution in highly populated areas.
- Major changes to traffic patterns were based 100% on "models". Officials admitted that those "models" do NOT include future economic development (ie – Amazon warehouse) nor human behavior (choice) as variables in their modeling.
- The Project Director (Mark Frechette) was quoted in a recent article about adding another lane to East Genesse Street as saying: "As traffic continues to grow, if development continues to expand, then there's going to be more and more traffic volume that the transportation system has to accommodate and there's really not good options." How is it possible that spending over $2 Billion Regionally cannot yield the transportation hearts of our communities any "good options"?
- As it stands today, the current plan drops over 40,000+ cars per day into the Southside of Syracuse and onto its current traffic while sending an additional 60,000+ around the City via the current 481. "Improvements" at various exits and highway mergers have been met with stiff resistance and concerns. Beyond the major overhaul on the current 481 at Exit 3, residents have been alarmed to learn about plans for a massive roundabout planned next to MLK Elementary School. How can this possibly be a viable vision for the children of our community?
- At the Mott Rd Elementary School Public Hearing, residents were shocked to learn that DOT officials and Traffic designers were unfamiliar with basic patterns with neighboring roads such as Erie Blvd, Jamesville Rd and Woodchuck Hill Rd.

Given the apparent lack of local environmental consideration and the inability of public officials to delineate an overall public benefit for the current plan, our State and Federal officials must seek an alternative solution to this moment of opportunity.

Admittedly, the impact from the current structure of I-81 has been detrimental for generations in our City. As a result, the residents of our City and our Region deserve a thorough, thoughtful

and inspiring solution. One such solution that has drawn attention and merit is the Harriet Tubman Memorial Freedom Bridge. A recent Press Release (see attached) has attracted both local and broad support as both practical and inspirational. Most importantly, while the Bridge itself is transformative – this plan allows for the Community Grid in downtown Syracuse to be preserved. Perhaps the time is not too late for our leaders to consider the 80+ descendants of Harriet Tubman who have publicly endorsed this project. Why should we spend $800 Million to create future traffic snarls in the suburbs that admittedly don't even address the problem? Instead, why not create an iconic architectural solution that displays the best of our history while distinguishing Syracuse among the other mid-metro Cities that dot the journey north and south on I-81? What is more impactful for travelers on their journey: a 4-lane traffic light to the DeWitt Wegmans or a 70-foot high bridge that showcases the future and displays the very best of our past?

The people of the City of Syracuse deserve better than the current plan. The people of the Region affected by such major changes deserve to know the environmental impact for their children before construction begins. With new leadership in Albany and in Washington, what would hold back our leaders from pausing and giving this project due diligence? Given the existence of an alternative solution that corrects so many wrongs, why not give this option full investigation?

As Harriet Tubman has famously said, "Don't ever stop. Keep going."

September 9th, 2021

Dear Sirs-

A number of residents from the town of DeWitt attended the Public Hearing regarding the I-81 Viaduct Project Draft Design Report (DDR)/Draft Environmental Impact Statement (DEIS) held at Mott Rd Elementary School on September 8th. The discussions with the DOT representatives exposed an array of proposals and "improvements" that will yield potentially negative impacts to the people of DeWitt in regards to basic environmental concerns. Chief among these concerns are:

- The **massive increase of highway traffic** on the new "Rt 81" going through the heart of DeWitt every day. This increase in volume will **more than double** and no representative could answer if those models included potential increases from the Amazon distribution center in Clay as well as other economic projects in the Region such as the expanded railyard in East Syracuse.
- The impact on traffic on Rt 92 as a result of the removal of the eastbound "clover leaf" exit (3E) and **the addition of a 4-lane traffic light on East Genessee St**. Brian Damiani (DOT) explained that the goal of this complete redesign was to eliminate the "difficult" merge of people from that existing cloverleaf across lanes to access the turn lanes into DeWitt Wegmans. Surely there must be a more prudent and less disruptive solution to such a minor issue.
- In regard to increased noise pollution, Justin Kellogg (DOT) informed us that **DeWitt residences and neighborhoods do not qualify for sound barriers due to a low level of population density**. Yet, there were renderings for a sound barrier on the east side of the new "Rt 81" at the DeWitt Town Hall where no residences exist. Mr. Kellogg claimed that the increase to nearly 70,000 vehicles per day will have negligible impact in regards to sound pollution based on "modeling"; this claim seems far-fetched and fantastical.
- In speaking with several DOT representatives, they shared that **there are currently NO ENVIRONMENTAL STUDIES on the impact of emissions from idling traffic** from the new traffic light: both on Rt 92 (eastbound) and in the now extended 4 lane-off ramp next to the Pickwick neighborhood. Reassurances that the overall emissions impact of the project "regionally" fall far short if **the air is unnecessarily more polluted in areas adjacent to neighborhoods** with children and elderly populations. This fact made us wonder what the actual emissions impact will be on the **Southside which will now see 44,000 vehicles** enter their neighborhood every day.
- In conversations with several DOT representatives, it became abundantly clear that they are both **unfamiliar with the local area and network of roads and patterns of lifestyles.** A few potential outcomes are easily predictable based on human behavior:
    - As south and eastbound traffic backs up on Erie Blvd north of Kinne Rd due to the new traffic light on Rt 92, traffic will pour into the **Orvilton neighborhood** in order to move west on E Genesse St.
    - As residents of Fayetteville and Manlius attempt to avoid a 4-lane traffic light at the end of the exit ramp, they will choose to exit at Jamesville Rd and traverse east via **Woodchuck Hill Rd** – a road that is ill-equipped for an increase in traffic, especially at times of day that **students and busses** are accessing the high school.
    - There was no familiarity nor input regarding the added congestion to back-ups from the traffic light at the intersection of eastbound Rt92 and Erie Blvd and the already

congested intersection during peak hours at Jamesville Rd. In fact, these intersections do not even appear within the literature presented to the public.
    - Residents of **Fayetteville will now seek alternative routes into the City of Syracuse** via Kirkville Rd and Woodchuck Rd to avoid the 5 traffic lights on E Genessee St starting at Lyndon Corners through Jamesville Rd.
- There was vague discussion of adding a lane on eastbound E Genesse St **at the Ambergate base of the DeWittshire neighborhood** to both service an expanded "Rt 81" on-ramp as well as to handle the increased flow of idling cars at the new traffic light. No specific answers were given in regards to **the encroachment into the DeWittshire neighborhood** which is necessary in order gain that space.

Perhaps what was most disconcerting was **the lack of familiarity and knowledge with these very basic concepts and concerns**. Admittedly – there was no environmental impact study produced in regards to noise, sound or emissions at a meeting meant to disclose those very pieces of information. Every answer pointed to "models". However, upon full disclosure, those models admittedly did not include 2 key variables: human choice and increased future economic activity.

Increasingly, as this project is being unveiled to the community "at the eleventh hour", we are learning about other concerns from members of other communities across the Region. While we can not speak directly to those residents' concerns, learning about the 40,000+ cars and trucks that are set to spill into the Southside neighborhood as well as the impact for residents who live on the Westside and desire to head South yielded no good answers from DOT representatives as well.

Everyone agrees and understands the Rt81 as it exists is past it's useful lifespan; we are not "change-resistant" However, the solutions and information shared at this forum **caused grave concerns that the government's solution will cause exponentially more damage than good.** We strongly urge our civil leaders to seek an alternative solution to this current plan.

Sincerely,

Nathan & Tammy Gunn

Subject: Tear Down the Structural Racism of I-81

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Joan Gussow

Subject: Tear Down the Structural Racism of I-81

Dear

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Deb Halliday

Subject: Tear Down the Structural Racism of I-81

Dear

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Janet Hansen

Re: Syracuse i81 decision,
As a long time Syracuse area homeowner I know well the need for a positive change re: I81. The community grid concept offers the possibility of healing a wounded city. A healthy city must celebrate diversity and provide space for human activity, quality schools, the arts and community pride.
Get it right for now and for future generations!
Think community .. Celebrate a better Syracuse.
Thank you,
Susan Harbison

Concerns with Community Grid from Crowne Plaza Syracuse Hotel

To Whom It May Concern--

New post covid times call for new measures!

On behalf of TJM Syracuse, LLC, dba as the Crowne Plaza Syracuse, and myself, whom has witnessed firsthand the hospitality and tourism market for 10 years I wanted to provide some statistics on the impact of our sole asset. A short background to hopefully add credibility to my thoughts and comments, after obtaining my 4 year degree at SUNY Delhi for Hospitality Management, I started my career in Orlando, Florida. I was in various leadership positions at the Gaylord Palms Resort (1406 rooms, 400K sq feet of space). I moved back to Syracuse to pursue sales and marketing to round out my experiences. I moved up through Director of Sales and Marketing and into the General Manager role, which I have been in since June 2018. I have the honor of being the VP of GHSTA as well as have a seat on the Visit Syracuse board (Onondaga County's CVB.)

Tourism and specifically the i-81 bridge project are a large component of my ownerships decision on Crowne Plaza's future. Syracuse is not a market where business is gushing for hotels, therefore any impact on business can be the straw that broke the "camel's back" in the investment. Some statistics to mention that directly relate to what we fear losing or diminishing as a result of Community Bridge only:

-We average $8 million in total revenue sales, approximately $6 million of this is from guest room sales. This generates about $640K in sales tax and $900,000. Reduction in business means a reduction in tax revenues. (This doesn't include the $460,000 in property/school taxes; if valuation drops this will as well)

-COVID's impact has put owners on the brinks. In 2020, we had one profitable month and overall were a net loss of $1.4M. In 2021 we are trending to be a net loss of $250K. PPP money and federal programs are over. This added impact will compound the situation.

-Over saturation of hotels in the market with two new full serve hotels opening in 16/17. This reduced revenues by about $1M per year already, or a decrease of 88.8%. The market has been eroding since 2013.

-10% of our business comes from same day books and the ease of access on/off i-81.

-Destination marketing. Syracuse gets city wide conferences as a result of being centrally located. With the looming news of the bridge construction as well as diversion, this will likely decrease city wide attraction by 10-15% in the downtown market. As a CVB we are grossly under funded leaving little resource to market over top of the negative messaging. (This should be a line item financially for the betterment of Tourism).

It is not that the Community Grid is a poor idea; rather adapting to the business community needs post COVID to a combined solution….Community Grid with the Harriet Tubman Memorial Skyway.

I would be happy to further discuss these details and more should the opportunity be presented. I am very passionate about what is best for this community as well as the longevity of tourism!

Warm Regards,

Kyle D. Hares

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Alexander Harris

Hello,
I am extremely concerned about the rebuilding of Rt 81 through the town of DeWitt. We need the following: sound state of the art, attractive ***sound mitigation*** construction all along Rt. 481 ->(Rt. 81) here in Dewitt. Any upgrading/ rebuilding of the Interchange include pedestrian, bicycling, family and human-friendly, protected infrastructure (covered walkways, traffic lights, signage, *over and underpass access*!
No rerouting traffic through Dewittshire Neighborhood. No through traffic allowed- this should be monitored and tickets given. People speeding through the neighborhood to avoid lights is already an issue. Opening up this neighborhood or encroaching in any way will ruin the quality of life here.
Thank You
Perri Harris

Subject: Tear Down the Structural Racism of I-81

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Paige Harrison

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Julie Hassman

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also

provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.

● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal "SEP 14" local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Joshua Heffron

Sharon Millhouse

Subject: Tear Down the Structural Racism of I-81

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Mary Heller

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.

● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

Dear sirs,
Please find attached a formal request to extend the comment period for the Draft Environmental Impact Statement related to the I-81 viaduct project. Given the length of the DEIS and the importance of this project on a local, state and national scale, we feel this request is more than appropriate. I would appreciate a response as soon as possible.

Thank you for your consideration.

Dear Mr. Frechette and Mr. Marquis,

On behalf of the members of the Trucking Association of New York, I am writing to request consideration of extending the public comment period on the I-81 Viaduct Project Draft Environmental Impact Statement (DEIS) by an additional 90 days.

Currently, the comment period is set to expire Tuesday, September 14. The project report was released on July 16, giving just 60 days for community engagement and public comment. The report released by the New York State Department of Transportation is more than 28,000 pages in length. Sixty days is a woefully inadequate amount of time to provide interested stakeholders for an accurate and thorough review of this massive document.

Additionally, we believe consideration needs to be given to expanding the in-person public hearing opportunity. Two sessions, held on the same day in the same location simply does not provide the opportunity for interested parties to participate in this process. The current outreach schedule does not provide accommodations for the surrounding communities of Syracuse who work and travel to the city on a regular basis and their voices must be heard as well.

New York State residents have a once-in-a-generation opportunity to literally change the landscape of their communities through this project and this current outreach plan does not provide for equal access to this much-needed collaboration.

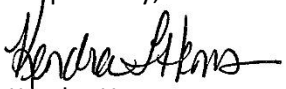
The published DEIS and supporting technical documents are so voluminous that we need adequate time to assess how key safety and environmental concerns central to our members are addressed. Eliminating a highway and replacing it with a boulevard lined with controlled intersections increases exposure between commercial vehicles and pedestrians and bicyclists. We struggle to understand how the assumption that there will be no significant impact on safety has been determined.

Further, the trucking industry has made great strides in improving our carbon footprint and impact on the environment. On the face of it, the boulevard option immediately increases emissions from idling vehicles stopped at controlled intersections. The highlighted improvements to I-481 will not address increased traffic resulting from the elimination of the viaduct and will likely increase congestion. This is in direct conflict with the greenhouse gas (GHG) reduction goals of New York's Climate Leadership and Community Protection Act (CLCPA).

The I-81 Viaduct Project will have a significant impact on the lives of millions of New Yorkers today and for decades to come. Let's not repeat the mistakes of the past. We must make sure that this public comment period is open, transparent and accessible to everyone who lives, works or travels through Central New York.

I look forward to your reply. Please feel free to contact with me with any questions.

Respectfully,



Kendra Hems

Gentlemen,
A month has passed since my initial request for an extension to the comment period on the I 81 Viaduct Project Draft Environmental Impact Statement. Review of this document is a massive undertaking and we are struggling to not only complete the review, but also have time to complete our written comments within the 60 days that have been provided. I understand that we are not the only organization to request such an extension. As we are now closing in on two weeks remaining until the current deadline of September 14, I am requesting an immediate response so that we, and other stakeholders, can adequately plan.

Sincerest regards,
Kendra Hems

ATTENTION: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.

● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.

● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal "SEP 14" local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Luke Henry

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Kathryn Herskovits

Sharon Millhouse

Subject: Tear Down the Structural Racism of I-81

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

ATTENTION: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that still persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. However, the plan ignores the history and the current needs of the environmental justice community that lives adjacent to the viaduct that will be demolished.

It doesn't have to be this way. The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should reflect the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use
● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Conduct a new analysis of land use that adequately considers the trends of the environmental justice community that lives adjacent to the raised viaduct.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth
● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction.
● Create a Community Restoration Fund.

● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity
● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent to Black and Brown Syracuse residents.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children
● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, defined as one used by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Quentin Hicks

I see that the state has now extended the comment period to October 14th. Enough already! This has dragged on for far too long! There will never be a 100% consensus on this project, but if the state doesn't go ahead with it now, while there are resources available, the opportunity will be lost. It's taken too much time and energy with these endless public meetings and far-fetched plans that then need to be endlessly debated! Stop asking for public comments and start the community grid project!

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.

● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal "SEP 14" local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

ATTENTION: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

To whom it may concern:

I agree with the following statement relative to the proposed community grid. Additionally, the thought that a modified roadway will improve community relations and/or living conditions in certain areas is, in my opinion, delusional.... I am also opposed to the rerouting of 81 to the 481 bypass - traffic at the Fayetteville / Dewitt exits is already a bottleneck...highway or traffic engineers have repeatedly proven their inability to properly project the impact of "new / revised" traffic patterns.....Keep things simple - keep i81 - resolve it for safety and move on.

The proposed community grid alone will damage our region for years to come due to:

- increased congestion on city and neighborhood streets that were never meant to handle such heavy traffic;
- added drive times to key locations, guaranteeing that Syracuse will no longer be the "20-minute city" we all love;
- and the addition of more than a dozen traffic lights, further slowing down our city with all the extra bottlenecks.

To: <i81opportunites@dot.ny.gov>

Hi,
Here are public comments about the I-81 project from a group of concerned physicians and public health professionals. I'm copying the letter in the email and also attaching a pdf. I'm also attaching some of the data sources and references used.
Sincerely,
Travis Hobart, MD, MPH, FAAP

Mark Frechette, P.E.
Project Director
New York State Department of Transportation, Region 3
333 East Washington Street
Syracuse, NY 13202

14 October, 2021

Dear Mr. Frechette,

As local physicians and public health professionals, we have taken great interest in the proposed plans for I-81 due to their potential impact on children's and community health. We have the following comments about what could be done to prevent, minimize, monitor, assess, and if needed, treat, any health conditions that could arise or worsen for local residents impacted by the planned construction project. We make these comments on our own behalf as concerned professionals and citizens, and they should not be construed to represent the viewpoints of our employers. We are firmly in favor of the community grid proposal as the best way to build a healthier community and look forward to partnering with the city and other stakeholders in any

way we can to help make it work in a healthful way. We're grateful for the work that the Department of Transportation has put into the original draft environmental impact statement (DEIS) as well as the revisions to it earlier this year.

In particular, we're concerned about several potential health risks that could arise or worsen due to the planned I-81 demolition and construction of the community grid. Our biggest concern is the placement of the roundabout near STEAM at Dr. King Elementary, and the proximity of the new boulevard to the school. EPA evidence indicates that pollutants from motor vehicles are most concentrated within 500 feet of roadways, and that such pollution can make classroom air more hazardous to breathe.[1] The neighborhoods surrounding I-81 have a disproportionate burden of asthma compared to other local neighborhoods, with the highest rate of pediatric emergency department visits in the county (194.8 visits per 10,000 people) in the same zip code as Dr. King Elementary.[2] While we are hopeful that total traffic will be less in the neighborhood after completion as you predict, we fear that moving the highway to street level just outside the doors of this school will lead to worsening pollution for the children there. In addition, we have significant concerns about the traffic noise at the school and the risk of injury if children wander near this busy, high-speed roundabout. The news that you are reconsidering the location of the roundabout due to community feedback[3] is welcome, and we urge you to find an alternate location. We also recommend the use of mitigation measures in and around the school, including sound wall barriers and proper air filtration as the cited EPA guidance indicates that both of those reduce risks to students. Another alternative would be to relocate the school entirely, further from the roadway, in close consultation with the community and school district leadership. In addition, we implore you to seek further community input from all stakeholders prior to deciding on the final location of the roundabout (or the school!).

Another concern of ours is the likely presence of lead on and around the existing I-81 structure. As you noted in the DEIS, there is likely lead-based paint on the current overpass. In addition, there is certainly lead in the soil around the highway from previous use of leaded gasoline on the roadway. That lead does not degrade over time, and still poses a risk to those exposed to it. We urge you to follow stringent lead control practices when removing the painted structure, digging in the soil, and disposing of construction waste to avoid further exposing the local community to lead. Lead is a potent neurotoxin that leads to learning and behavior problems, particularly in children, for whom it can have lifelong impacts.[4] Children living near Dr. King Elementary have a much higher rate of lead poisoning than those in other local neighborhoods; lead exposure affects more than 15% of children in several nearby census tracts, and a few of those tracts have rates above 20%, compared to 9% in the city and 4% in the county as a whole.[5] Further exposure of children to lead in these neighborhoods would worsen a health risk that already plagues the community.

Given these and other concerns, we believe the best course of action is to undertake a health impact assessment (HIA), including phases before, during, and after construction. An HIA would help to determine the specific health impacts of the construction project on the community.[6] It could address and mitigate multiple potential health concerns, such as air and noise pollution from construction vehicles, demolition, and the future roadway; the mental health impacts of a prolonged construction project; and the impact of hazardous materials that might be released.

Additionally, we believe that an independent and confidential environmental health registry or other method of tracking future health impacts could help to assure the health of the community by identifying and treating these impacts early, so long as the community is involved in its inception and implementation. Health registries have been deployed in previous episodes of environmental health disruption, such as in Flint, MI and New York City after the 9/11 attacks on the World Trade Center.[7] Using an HIA and environmental health registry will help ensure that the health impacts on the local community are small and that both the risks and benefits of this promising project are borne equitably.

Please do not hesitate to reach out if you have any questions about these recommendations. We would be happy to provide further input as the project progresses.

Sincerely,

Travis Hobart, MD, MPH, FAAP

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also

provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Adara Hobbs

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Daniel Hofer

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities affected by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.

● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.
● Apply for the federal "SEP 14" local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for affected Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

Protect Land Use

● A land transfer policy must be put in place before returning the land to the City of Syracuse that restores and enhances communities impacted by I-81, specifically the predominately Black community adjacent to the viaduct.
● Create a land trust for the eight acres directly east of Martin Luther King Boulevard East for development by residents connected to the community.
● Accommodate residents who would like to relocate with an automatic right to return.

Protect Health and Wealth

● Conduct a cumulative exposure analysis for residents who live in the communities within 600 feet of the viaduct that includes a lead, noise, and air analysis and abatement.
● Conduct a community health needs assessment.
● Do not use Wilson Park as a staging site for construction or construction materials.
● Create a Community Restoration Fund.
● Offer market-rate buyouts, rent subsidies, and/or temporary relocation assistance for people who want to move.
● Conduct an easement reassessment so that renters receive easement payments.

Access to Opportunity

● Jobs generated by the project must go to the people who live directly adjacent to the viaduct and 30 percent of them should go to Black and Brown Syracuse residents.

● Apply for the federal “SEP 14” local hiring pilot program, and limit the hiring requirements to Syracuse residents. The SEP 14 application must be accompanied by a community workforce agreement to legally require that unions hire local Syracuse residents, with a preference for impacted Syracuse neighborhoods. The DOT must also provide independent oversight to ensure the goals of the labor agreement are met.
● Expand roads starting east of MLK Blvd. to the street grid and east side of Syracuse.
● Provide governmental oversight on all aspects of this project until it is complete.

Protect School Children

● Create a comprehensive construction plan in collaboration with parents, faculty, and staff at the Syracuse City School District.
● Move the proposed highway access ramp so it is at least 600 feet from STEAM at Dr. King Elementary School.
● Conduct a study to determine if the community grid will remain a major roadway, as defined by 30,000 cars or more daily.

These recommendations will assist the NYSDOT in meeting its own stated goals for the project. These include enhancing economic growth and vitality in the City, re-connecting the Syracuse community, and providing better access to jobs, businesses, and services in downtown Syracuse and beyond.

The recommendations will also help right a historic wrong and create more equitable outcomes for the entire region.

Sincerely,

Kayla Hom

Dear Mr. Smith

More than 50 years ago, Interstate 81 ripped through a working-class Black neighborhood in Syracuse. It displaced long-time residents and ensured that poverty, pollution, and a lack of resources would hurt the community that lived in the highway's shadow that persists today.

I agree with the New York State Department of Transportation's current preferred option to remove the 1.4 mile stretch of the viaduct and replace it with a street-level grid. Removing the viaduct is a great first step toward racial justice. However, we need to continue to advocate for environmental, racial, and economic justice to ensure the fair and equitable treatment of community members who live in the shadow of the viaduct.

The permanent removal of the viaduct could improve housing conditions, health outcomes, and economic and educational opportunities for all people in Syracuse. In order to do that, the NYSDOT should consider the following recommendations in its Environmental Impact Statement which will guide the construction project moving forward:

ATTENTION: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

To whom it may concern,

I am hopeful the plans for I-81 finally come to fruition and exceed everyone's expectations for improving Syracuse.

But let's talk about I-690. The area from West St., approximately, to beyond Midler is VERY DANGEROUS! In the past year, I came home from work in Cicero to more than one multiple car accidents that shut down that stretch of road. In fact, I'm aware of a handful of more incidents that involved multiple cars but didn't shut down the highway.

This area is too dark! It needs lighting improvements, even if creative or artistic, or even if only until a certain hour of the night, after which, the lights can dim. But for such a dangerous stretch of roadway, it's too dark. Also, the straight stretch is notorious for speeding. Something needs to be done to slow traffic here or increase traffic speeding enforcement, or possibly even permanent radar signs indicating the vehicles' speed and warning them to slow down.

It's a quality of life issue and we can't put a pricetag on safety. But I feel these suggestions in the grand scheme of costs are insignificant in comparison to the $2 billion price tag.

Thank you for your time.

I'm not a big fan of the walls along the proposed 81 replacing the viaduct. Also, the decrease in width and lack of shoulder is a major safety concern. I don't see this working as designed. One thing we can 100% rely on is despite the intent of the design that there will definitely be shortcomings in the design. That is a fact. And what about the possibility of some vegetation in the circle? I've seen this in Maryland and it slows traffic down.
